The British Association for the Advancement of Science:

The New World-Picture of Modern Physics: Sir James Hopwood Jeans

Scientific Events:

The Sixth International Botanical Congress; Economics and the Social Sciences at the Massachusetts Institute of Technology; The Beltsville Research Center; The American Standards Association; The New York Meeting of the American Psychological Association

Scientific Notes and News

Discussion:

Origin of Asphalts, Oil, Natural Gas and Bituminous Coal: Dr. E. Beel. The Ionization of Arginine and Histidine: Dr. Thomas H. Jukes and Professor Gerald E. K. Branch. Cause of Mortality of Young Grouse: C. H. D. Clarke. The Route of Infestation and the Site of Localization of Lungworms in Mollusks: A. and Dr. M. Hommaier. A Specific Contamination for the Production of Pseudo-Radioactivity: Dr. F. C. Brown

Scientific Apparatus and Laboratory Methods:

A Simple Automatic Pump: Jay Palmer

The British Association assembles for the third time in Aberdeen—under the happiest of auspices. It is good that we are meeting in Scotland, for the association has a tradition that its Scottish meetings are wholly successful. It is good that we are meeting in the sympathetic atmosphere of a university city, surrounded not only by beautiful and venerable buildings, but also by buildings in which scientific knowledge is being industriously and successfully accumulated. And it is especially good that Aberdeen is rich not only in scientific buildings but also in scientific associations. Most of us can think of some master-mind in his own subject who worked here. My own thoughts, I need hardly say, turn to James Clerk Maxwell.

Whatever our subject, there is one man who will be in our thoughts in a very special sense to-night—Sir William Hardy, whom we had hoped to see in the presidential chair this year. It was not to be, and his early death, while still in the fulness of his powers, casts a shadow in the minds of all of us. We all know of his distinguished work in pure science, and his equally valuable achievements in applied science. I will not try to pay tribute to these, since it has been arranged that others, better qualified than myself, shall do so in a special memorial lecture. Perhaps, however, I may be permitted to bear testimony to the personal qualities of one whom I was proud to call a friend for a large part of my life, and a colleague for many years. Inside the council room, his proposals were always acute, often highly original and invariably worthy of careful consideration; outside, his big
