JUST OFF PRESS—NEW (2nd) EDITION

NUTRITION and PHYSICAL FITNESS

By L. JEAN BOGERT, Ph. D.

formerly Instructor in Medicine, University of Chicago
Consultant in Nutrition, Delineator Institute

Dr. BOGERT’S widely accepted textbook has just been revised and issued in a new (2nd) edition. A great deal of new material has been added, particularly the new facts regarding Vitamins. Here Dr. Bogert clearly sets forth the new quantitative basis of measurement, with tables showing the exact number of units in the vitamin-rich foods. Full consideration is given the function of the vitamins, symptoms of low-grade shortage, and the importance of high-vitamin diet. There is a completely new section on Constipation.

The practical teaching experience of Dr. Bogert has enabled her to write a textbook that has, from the day of first publication, been accorded the highest commendation. She brings out impressively the essentials of nutrition and the practical application of the study in the development of the body and in the maintenance of health. A few of the topics discussed in the new (2nd) edition are classification of foods, nutritional requirements of the body, processes by which the body utilizes food, planning and preparing meals, diets for children, for adults, in pregnancy, obesity and malnutrition.

12mo of 566 pages. Cloth, $3.00 net.

BOGERT’S FUNDAMENTALS OF CHEMISTRY

In this textbook the fundamental laws of chemistry are emphasized and the principles presented in simple language. The explanations are clear and the illustrative material simple. The needs of both student and teacher have been consistently met. The work begins with inorganic chemistry and leads the student into the study of organic and physiologic chemistry.

12mo of 365 pages, illustrated. By L. JEAN BOGERT, PH.D. Cloth, $2.75 net.

BOGERT’S CHEMICAL LABORATORY MANUAL

The simple experiments given in this laboratory manual will be found to meet the requirements of any course in general chemistry.

12mo of 142 pages, illustrated. By L. JEAN BOGERT, PH.D. Cloth, $1.50 net.

NAME ........................................ ADDRESS ......................................

Entered as second-class matter July 15, 1925, at the Post Office at Lancaster, Pa., under the Act of March 3, 1879.
THE JOURNAL OF NUTRITION
Published monthly by The Wistar Institute
John R. Murlin, Managing Editor, University of Rochester
Vol. 9 No. 3 to be issued in March will contain the following articles

ROBERT S. HARRIS and JOHN W. M. BUNKER. The phytin phosphorus of the corn component of a rachitogenic diet. One figure.

JOHN C. KRANTZ, Jr. and C. JELLEFF CARR. A statistical study of the metabolism of the fasting albino rat. One figure.

SAMUEL H. BASSETT and HELEN VAN ALSTINE. Mineral exchanges of man. VI. The effect of extirpation of a parathyroid tumor on the balances of electrolytes. Four figures.

E. H. HUGHES and H. G. HART. Production and composition of sow’s milk.

ALAN C. BURTON. Human calorimetry. II. The average temperature of the tissues of the body. Three figures.

ALAN C. BURTON and JOHN R. MURLIN. Human calorimetry. III. Temperature distribution, blood flow and heat storage in the body in basal condition and after ingestion of food. Four figures.

A. F. MORGAN, L. KIMMEL, A. FIELD and P. F. NICHOLS. The vitamin content of Sultanina (Thompson Seedless) grapes and raisins.

A. F. MORGAN, A. FIELD, L. KIMMEL and P. F. NICHOLS. The vitamin content of figs.

Price, $5.00 per volume, Domestic; $5.50 per volume, Foreign
Two volumes issued annually
Back volumes from 1 to 8, inclusive, may be had for $40.00

A Microscope

For Your Critical Research Work

The Spencer No. 8 Master Microscope has been developed to meet the most exacting research requirements, and at the same time, provide a maximum of comfort and ease of manipulation for the investigator.

Write for our folder which gives complete description of the microscope and its features that make it the finest, most precise microscope offered for research work today. Please address Dept. A-3.

JENA
SUPREMAX COMBUSTION TUBING

A highly resistant, clear, transparent, extremely hard glass tubing that can be used for the determination of carbon, hydrogen, nitrogen, sulphur, halogens, phosphorus and even arsenic. The softening point of Jena Supremax Glass is at 896°C (1645°F) and it can be used in laboratory work up to 800°C (about 1500°F). Continuous exposure can safely be made at 790°C (1450°F) for extended periods.

COMPLETE STOCK OF ALL DIAMETERS CARRIED ON HAND.
INQUIRE FOR SPECIAL LEAFLET.

The New Jena Slit Sieve Funnel, Type S, is now in stock.

Have You Seen It?

THIS BOOK gives analyses, composition and feeding costs of the Purina ready-mixed rations for almost every kind of laboratory animal. Already hundreds of scientists have requested a copy. Between 300 and 400 of them have found the ready-mixed feeds more satisfactory than their old rations. May we send you the book? Write for it.

CHEMISTS
who Analyse Alloys
depend on
WHATMAN Filter Papers

Chemists analysing Brasses, Bronzes, Babbitt Metal, Ferro-Alloys, etc. are enthusiastic users of WHATMAN Filter Papers.

They use No. 42 for the filtration of the difficult tin precipitate, because No. 42 retains fine particles, No. 41 is preferred for removing Ferric Hydroxide since it filters rapidly, and No. 40 is used for Silica because it combines rapidity, retentiveness and resistance to washing.

They prefer WHATMAN Filter Papers for their uniform dependability. When the foundry or the mill is waiting, Chemists whose jobs depend upon accurate, rapid analyses know they can rely upon WHATMAN Filter Papers to see them through.

Standardize your laboratory on WHATMAN and be sure of your Filter Papers.

Samples on request.

For
Counting Bacteria in Milk

CENCO-PHELAN
COLONY COUNTER

Meets Requirements of
APHA STANDARD METHODS

THE lack of agreement between laboratories and technicians in the counting of colonies on Koch petri plates in milk control work has resulted in the inclusion of definite recommendations of equipment and procedure in the 1934 Edition of the Standard Methods of Milk Analysis of the A.P.H.A. The Phelan Colony Counter not only meets the requirements for milk counts but those for water also. Gives magnifications of 1 1/2 and 2 1/2. Has lever-operated hand tally and is properly illuminated.

“POINTOLITE” LAMPS

The light from the “Pointolite” Lamp comes from a very small, white-hot bead of tungsten. As the bead remains in a fixed position after the lamp is started, it can be placed right at the focus of a condensing lens or other optical system. There is no flicker; the field of illumination is distributed evenly; and the lamp requires no attention whatever after starting.

“Pointolite” Lamps are giving excellent results in many lines of scientific and laboratory work—particularly in conjunction with photomicrographic outfits, projection microscopes, photometers, galvanometers, etc. For d.c. circuits “Pointolite” Lamps are made in 30, 100, 500 and 1000 c.p. sizes, while for alternating current we have the 150 c.p. lamp here illustrated.

Biological Materials

PLAIN PRESERVED AND INJECTED SPECIMENS

BOTANY SPECIMENS AND MOUNTS

LIVE MARINE AQUARIA SETS

PROTOZOA CULTURES

DROSOPHILA CULTURES

MICROSCOPE SLIDES AND MUSEUM PREPARATIONS

The Supply Department carries a full line of materials for class observation and dissection, and their service of collecting and furnishing these specimens is at your disposal.

In addition to an excellent stock of plain preserved and injected Dogfish, Lobsters, Squid, and Necturus, the Supply Department wishes to advise that this is the season for Live Marine Aquaria Sets—November through March. Shipments of these live sets, even to the western states, have been very successful and have proven of great interest to both instructor and student. Detailed information regarding this live material will be furnished upon request.

All materials purchased are guaranteed to give absolute satisfaction and catalogues or quotations are sent to those desiring same.

Kewaunee Furniture Promotes

Efficient Handling of Large Classes

Every Piece is Pedagogically Correct in Every Detail

The answer to crowded laboratory classrooms is to be found in the use of Kewaunee space saving Laboratory Furniture. This pedagogically correct furniture accommodates more students per class and makes the classroom available every period of the day.

All students have more working space, everything is more convenient and all students are constantly in close touch with the instructor. Kewaunee Furniture is the choice of the nation’s finest Universities, Colleges and High Schools. Be sure to write for our catalog on your school’s letterhead.

BOYLE'S LAW AND AIR THERMOMETER

The new Milvay Boyle's Law and Air Thermometer is equipped with the newly developed screw-capped tube shown in the lower illustration at the left. This new feature abolishes the shortcomings of the ordinary glass stopcock and offers many additional advantages that assure maximum efficiency and convenience in laboratory work. Because of its unique construction and method of attachment it eliminates the usual distortion of the tube and the consequent distortion of the air column within. Further, it needs no stopcock grease . . . cannot stick due to temperature changes . . . always seals perfectly . . . eliminates danger of breakage due to "frozen" stopcocks . . . is more convenient . . . operates freely at all times.

The support frame of the Milvay Boyle's Law and Air Thermometer consists of two highly polished square metal rods and a 100 cm. scale, graduated in millimeters, mounted on a tripod base with leveling screws. Tube holders are rigidly constructed of metal to protect glass tubes from breakage. Thumb screws are provided to clamp tubes at any desired position along scale. The heavy rubber tubing connecting the glass tubes is covered with woven silk to prevent bulging. Requires but 1.65 lbs. of mercury. Price without mercury .................. $25

CHICAGO APPARATUS COMPANY
1735-43 NORTH ASHLAND AVENUE, CHICAGO
A COMPLETE ASSORTMENT OF
"PYREX" BRAND LABORATORY GLASSWARE
IN OUR STOCK FOR IMMEDIATE SHIPMENT

Of the 1,157 items of "PYREX" Brand Laboratory Glassware listed in the manufacturer's catalogue, 610 are already listed in the current 1044-pp. edition of our catalogue LABORATORY APPARATUS AND REAGENTS—published before the Corning catalogue.

We now maintain, in addition, complete stocks of the remaining 547 items listed in the Corning catalogue, for immediate shipment, in original packages, and at maker's current prices. The entire assortment of 1,157 items of "PYREX" Brand Laboratory Glassware is now on permanent display in our salesroom.

The "PYREX" items not already listed in our catalogue may be conveniently ordered of us under the maker's numbers as printed in the Corning catalogue, which has already been distributed directly to consumers by Corning Glass Works.

Historical. In the spring of 1915, after witnessing in the research laboratories of the Corning Glass Works a series of definitive tests of the physical characteristics of "PYREX" chemical glass with reference to its suitability for laboratory use, we placed a stock order for 150,000 pieces, mostly Flasks and Beakers. Upon this order the selection of shapes and quantities for the first factory production was based and the ware delivered against it in October, 1915, was the first available for sale.

Because of this initial stock order, the Corning Glass Works kindly permitted us to make the first advertising announcement of "PYREX" Laboratory Glassware in The Journal of Industrial and Engineering Chemistry, October, 1915. In this advertisement, after describing the unusual stability and low expansion coefficient of "PYREX" chemical glass, we stated:

"Our expectation is that, in practical laboratory use, Pyrex flasks and beakers will prove distinctly superior to anything heretofore offered, either at home or abroad."

It is gratifying that our expectation has been so universally fulfilled and confirmed by the experience of scientists, not only in the U. S. but throughout the world.

In each of the nineteen years from 1915 to 1934, inclusive, we have been the largest distributors of "PYREX" Brand Laboratory Glassware and our average stock of same is maintained at from 3000 to 4000 original cases.

Two Important New Books

Branson and Tarr's

INTRODUCTION TO GEOLOGY

By Edwin Bayer Branson, Professor of Geology and Paleontology, and W. Arthur Tarr, Professor of Geology and Mineralogy, University of Missouri.

In press

In this elementary text the authors lay particular emphasis upon basic principles and geological reasoning rather than technical data. The book gives a broad survey of the fundamentals of both physical and historical geology in a simple, logical presentation which the beginning student can easily understand. Throughout, mere memorization of terms is avoided. The arrangement of material differs from that ordinarily followed, since the authors seek to develop the sequence of events in the study of the earth and its materials according to their origin. The text makes clear the positive relationship between the different geologic processes and the organization of the earth materials, thus fitting the whole into a connected story of the earth. The treatment of historical geology attempts to give, without technicalities, a clear understanding and appreciation of the subject. Although the book is unusually concise, it adequately covers all the essentials.

Knowlton's

PHYSICS FOR COLLEGE STUDENTS.

New second edition

By A. A. Knowlton, Professor of Physics, Reed College. 620 pages, $3.75

Here is the second edition of a pioneering text which for nearly seven years has been a standard in the field. Knowlton's Physics was one of the first textbooks to succeed in presenting physics from the humanistic viewpoint. It tells, in an interesting, readable style, the absorbing story of man's progress in the mastery of his physical environment, and at the same time gives the student a sound, solid foundation in physical science. These features, so well liked by both teachers and students, are retained in the new edition. In revising the book Professor Knowlton has simplified the treatment, making it more teachable, and has rearranged the material to permit more convenient division into term and semester fractions. Nevertheless, the basic pedagogical philosophy which made the first edition so successful has not been abandoned, and the book continues to combine a stimulating approach with sound scholarship.
