In this table s, m, f, ff represent strong, medium, faint and very faint. It is possible that one or two of the fainter lines are beta reflections.

In the meantime it may be concluded that:

1. The proteins edestin, excelsin and hemoglobin crystallize with water of crystallization, which is very readily lost. The band pattern previously described as common to these and other proteins is produced by apparently amorphous materials resulting from the efflorescence of the crystalline compounds.

2. If care is taken to prevent the decomposition of their crystals, these proteins give typical powder patterns rich in sharp lines. Some of the observed spacings are much longer than those found from insoluble protein structures like silk, hair and tendon.

EFFECTS OF THEELEN ON THE MALE GENITAL TRACT

The principal known action of theelin (ketoxydroxyestrin) is to induce tissue proliferation in the accessory genital organs of the female. This has been demonstrated in the usual laboratory animals; the monkey and man. Since an oestrous-inducing agent has been extracted from the urine of normal human males it seemed desirable to study the action of theelin on the male genital tract. Some changes have been described in the mouse and rat; and in the male monkey it is known that this oestrogenic extract is responsible for a sexual skin reaction.

The effects of interest here have been brought about by the subcutaneous injection of 60 cc of theelin over a period of thirty-four days into an immature male monkey weighing 2,450 gms at autopsy. A cage mate of similar age, weighing 3,000 gms at autopsy, was used as a control. The most striking change in growth was found in the seminal vesicles, those of the injected animal weighing 54 times as much as those of the control. Histological study showed the increase entirely due to muscular hypertrophy of the walls of the vesicles. There had been no stimulation of the secretory epithelium, and the lumen of the individual tubule had fewer outpocketings than the control. It appears that the activity within the wall had restricted concurrent increase in lining epithelium. The ejaculatory ducts were enlarged. Within the prostate there was also a relative increase in fibromuscular stroma at the expense of the epithelial glands. As in the prostate of the adult castrate monkey, where the epithelium is markedly degenerated, the prostate takes a more posterior position in relation to the urethra. Another striking tissue change was found in the prostatic utricle where extensive cornification of the epithelium had taken place increasing the thickness of the epithelium as much as twenty-five times.

The prostatic utricle is a remnant of the Müllerian ducts and as such the change here is analogous to the well-known effect in the vaginal mucosa. In view of this the report of a similar effect in the posterior prostatic lobes of the mouse may indicate that these lobes are not true prostate but have an origin in common with the utricle. In the monkey this cornification extended along the posterior wall of the urethra into the membranous portion and the columnar epithelium of the pars cavernosa had become cornified.

Notwithstanding the great development of the scrotal sac the right and left testes (which had not increased in size) lay in the groin 3.5 cm and 2.5 cm, respectively, from the external inguinal rings. There was incontinence of urine and the usual swelling of superficial tissues about the distal portions of the genital tract.

BOOKS RECEIVED

HERTY, C. H., JR. and others. The Physical Chemistry of Steel Making. Illustrated. Mining and Metallurgical Advisory Boards to the Carnegie Institute of Technology. $3.00.

McCOMBS, LOIS F. AND MORRIS SCHERO. Bibliography of Non-Metallic Inclusions in Iron and Steel. Pp. xii + 308. Mining and Metallurgical Advisory Boards to the Carnegie Institute of Technology. $4.00.
ORTHOHYDROGEN, PARAHYDROGEN
AND
HEAVY HYDROGEN
By Adalbert Farkas  $3.50

This new volume in the _Cambridge Physical Chemistry Series_ is the first book about heavy hydrogen, which was discovered in 1931 by Urey, Brickwedde and Murphy. It describes the preparation, properties and chemical behaviour of the different kinds of hydrogen and illustrates how the investigations connected with this subject have contributed to the solution of some chemical and physical problems.

SCIENTIFIC PAPERS
AND ADDRESSSES
By the Hon. Sir Charles Parsons
$4.50

Sir Charles Parsons, the inventor of the steam turbine, was one of the most important engineering figures of the last century. This book contains a number of his papers dealing with the steam turbine, the artificial manufacture of diamonds, and other subjects.

THE HYPERGEOMETRIC
FUNCTION AND ITS
GENERALIZATIONS
By W. N. Bailey  $2.00

A new volume in the _Cambridge Tracts in Mathematics and Mathematical Physics_ which brings together the mass of results obtained from numerous papers, published since 1923, dealing with the generalized hypergeometric series.

Forthcoming

THE THEORY OF ATOMIC SPECTRA
By E. U. Condon and G. H. Shortley

The authors open with a brief historical introduction in the first chapter and develop an exposition of quantum mechanics along the lines laid down by Dirac, in the second chapter. The remaining seventeen chapters are devoted to a unified, logical deduction of the structure of the spectra of atoms from quantum mechanical principles. The theory is given in full detail and the results are amply documented with comparisons with experimental facts.
Outstanding New Texts

INTRODUCTION TO PLANT LIFE
Carl L. Wilson, Dartmouth College
and Julia M. Haber, Pennsylvania State College

This text, modern in attitude and highly teachable, is excellently adapted to the one-semester course in botany which aims to give the student a general, cultural grounding in the science of plant life. While the theoretical aspects of the science are treated adequately, stress is laid throughout on the practical and pertinent relationship between human and plant life—thus presenting botany as a subject of personal importance to the student. Written in a simple and engaging style, comprehensive and practical, excellently illustrated, the book is certain to become a standard and popular text in elementary botany courses.

Ready May 1

THE GEOGRAPHY OF EUROPE
By Raoul Blanchard and Raymond E. Crist

A broad, up-to-date, and highly interesting survey of the geographical aspects of the European continent. The economic, racial, and social elements that characterize the several parts of Europe are discussed with unbiased and incisive clarity. Professor Blanchard, one of the leading geographers of Europe, has for several years been a guest lecturer at Harvard University.

Ready in May

THE JOURNAL OF NUTRITION
Published monthly by The Wistar Institute
John R. Murlin, Managing Editor, University of Rochester

Vol. 9. No. 5.

Contents for May 1935

WALTER C. RUSSELL, M. W. TAYLOR and D. E. WILCOX. A comparison of the antirachitic potency of cod liver oil and irradiated ergosterol on a curative and preventive basis.
RAG G. DAGGS. Studies on lactation. II. Technique for studying lactation in rats. One figure.
RAG G. DAGGS and R. L. TOMBOLIAN. Studies on lactation. III. Effect of various dietary principles on lactation in rats. One figure.
RUTH C. CLOUSE. The effect of grape as compared with other fruit juices on urinary acidity and the excretion of organic acids. Six charts.
SAM I. STEIN. Experimental studies on the hypophysis cerebri. IV. The effect of vitamin E deficiency in the female albino rat.
PAUL L. DAY, WILLIAM C. LANGSTON and CARROLL F. SHUKERS. Leukopenia and anemia in the monkey resulting from vitamin deficiency.
GLENN L. BARNUM. The vitamin E content of eggs as related to the diet of the hen and to hatchability.
ELIZABETH C. ROBERTSON and M. ELIZABETH DOYLE. Intestinal stasis in low mineral diets. Four figures.
L. A. MOORE, C. F. HUFFMAN and C. W. DUNCAN. Blindness in cattle associated with a constriction of the optic nerve and probably of nutritional origin. Six figures.

Price, $5.00 per volume, Domestic; $5.50 per volume, Foreign
Two volumes issued annually
Back volumes from 1 to 8, inclusive, may be had for $40.00
