Safeguarding Your Service

It's easy to telephone, but there's nothing easy about giving you good telephone service. It takes many thousands of trained employees to do that.

A considerable part of this work is handled by the Central Office men. Their job is to safeguard service—to prevent trouble from getting a start. They are constantly testing lines, circuits, switchboards and other equipment—working with outside repair men—performing the thousand and one tasks that keep things running right and prevent their going wrong. This work goes on twenty-four hours a day—every day in the year.

The "trouble shooters" of the Bell System work quickly, effectively because of careful training and long experience. Their loyalty, skill and resourcefulness are a priceless tradition of the telephone business.

It is no accident that your telephone goes along for so many months without trouble of any kind. The Bell System gives this country the most efficient, reliable telephone service in the world.
SIMPLIFIED MICRO-PROJECTION APPARATUS

Compact—Light Weight—Brilliant Illumination

The parts of the instrument are housed in a metal case in such a manner that troublesome adjustments are practically excluded. A special condenser ensures a correct beam of light. The source of light is an arc lamp, which is so arranged that each carbon can be adjusted independently. The position of the arc may be examined on a ground glass in the cover of the housing. The carbons are adjusted by two milled knobs which are coaxial and so arranged that they may be simultaneously worked by one hand.

Price with reversing prisms, but without microscope, including 100 pairs of carbons, for 110 v.D.C. $130.00 for 110 v.A.C. $141.00
