The PURINA
UNIFORM RATIIONS

Contain All Essentials for Good Production and Growth

PURINA LABORATORY CHOWS have been developed and improved through hundreds of feeding tests. They are carefully constituted to supply all nutritional factors necessary for prolific reproduction, and quick growth of young (except vitamin C for guinea pigs and monkeys). The good results obtained with stock colonies account in a large measure for the use of Purina Laboratory Chows in more than 300 laboratories.

Sample and Literature on request

LaMOTTE Blood Urea Outfit
For study of urea retention (urea nitrogen by factor). Result is read directly from special Urea Burette supplied. No calculations required. Accurate to 4 mg. urea per 100 cc. blood. Complete estimation takes only 15 to 20 minutes. Price, complete with instructions, $18.50 f.o.b. Baltimore, Md.

LaMOTTE CHEMICAL PRODUCTS CO.
418 Light Street Baltimore, Md.

Constant TEMPERATURE EQUIPMENT
Write for the Aminco Catalog
AMERICAN INSTRUMENT CO., Inc.
8010-8020 Georgia Ave. Silver Springs, Md.
Have You Seen the Beaver?

This modern dissecting knife consists of two simple parts: a replaceable blade, of surgical grade; a stout handle of stainless steel.

Those parts ingeniously interlock to provide all the rigidity of a one-piece tool. Yet the blade can be changed in two seconds.

Beaver Blades . . . of different shapes . . . have the keenest edge known to surgical steel.

Trial Set Sent On Approval

If you would like to try this knife, send for set No. 121S, including handle, dummy blade, and packet of six assorted blades. 
Postpaid for $1.75.

Use any or all of the blades with our compliments. If you are not enthusiastic, return the handle for full credit.

Thermoregulators

We announce the design of an ultra-sensitive vacuum tube thermoregulator unit. Because of the infinitesimal current passed through the mercury contacts, the relay is sensitive to microscopic changes in the height of the column. The unit will operate without circuit changes on 115 volts direct or alternating current. By means of a single change in connections, it may be used to control a cooling unit instead of a heater. Power up to 800 watts may be accurately controlled.

Special Equipment Designed and Manufactured
Eastman Organic Chemicals

**FOR RESEARCH**—save time by eliminating the necessity of preparing intermediates.

**FOR ANALYSIS**—increase speed, convenience, and accuracy of determinations.

**FOR INDUSTRY**—offer highest quality to the industrial user.

Nearly 3,000 different chemicals are listed in the Eastman Organic Chemical Catalog, a copy of which will be promptly forwarded upon request.

**CATHETOMETER**

This Cathetometer is designed to meet the demands for a less expensive instrument, of one meter vertical range, for accurate and general Laboratory work. The guide consists of a substantial brass bar on which is divided the scale in millimeters. The vernier reads to 0.05 mm.

The reading telescope is fitted with an achromatic objective of 25 mm dia. with 60° crosshairs and is focused by rack and pinion. With the extra objective draw tube which is supplied, the telescope will focus from 60 cm to infinity. The telescope carriage is provided with a level vial and delicate tilt adjustment.

The telescope and guide rotates on a strong vertical support rod and can be clamped in any position, and the instrument is supported on a heavy tripod base with leveling screws and foot plates . . . . . . . . $225.00
