BRAND NEW BOOK

Levine's Clinical Heart Disease

WITH 114 PAGES ON ELECTROCARDIOGRAPHY, WITH 444 ELECTROCARDIOGRAMS

This brand new book by Dr. Samuel A. Levine of Harvard Medical School, considers every phase of the management of heart disease. One of its outstanding features is the chapter of 114 pages on Electrocardiography. This chapter includes 444 Electrocardiograms on 95 figures, representing the recordings of practically every type of heart disease and many therapeutic reactions.

In addition, of course, all the other proved methods of diagnosis are given in detail, as are today’s therapeutic measures for treating each particular condition. There is valuable counsel on diet, measures for the relief of pain, drug therapy, with actual prescriptions, what to do for chronic cases, what to do in emergencies, how to treat heart conditions arising from other diseases, and every other bit of information that will prove helpful in the diagnosis and treatment of heart disease.

Octavo of 471 pages, with 444 electrocardiograms on 95 figures. By SAMUEL A. LEVINE, M.D., F.A.C.P., Assistant Professor of Medicine, Harvard Medical School. Cloth, $5.50 net.

Burton-Opitz' Elementary Physiology

Dr. Burton-Opitz' "Elementary Physiology" is used in many schools because of its thoroughness, the simplicity of presentation, and the clearness of diction. The author divides his subject into six parts: The Physiology of Muscle and Nerve, the Circulation of the Blood and Lymph, Respiration, Nutrition, the Nervous System, and the Sense Organs. The arrangement is logical and orderly, the subject continuously unfolding to the student, each division gradually leading into the next. There are 147 illustrations, 28 of them in colors. Fourth Edition.

12mo of 419 pages, illustrated. By RUSSELL BURTON-OPITZ, S.M., M.D., Ph.D., Lecturer in Physiology, Columbia University. Cloth, $2.50 net.

Schneider's Muscular Activity

Dr. Schneider in this book shows the student how each organ contributes to the function of the whole body. Then after he has clearly pictured to students the characteristics of each part, he shows how the body variables work together to maintain the efficiency of the bodily machine. A large chapter is devoted to the coordination of bodily activities and to the agencies of control. The effects of frequent and regular exercise are described, and physiologic facts always applied to the practical problems of fatigue, physical fitness, training, staleness, etc.

12mo of 401 pages, illustrated. By EDWARD C. SCHNEIDER, M.P.E., Ph.D., D.Sc., Professor of Biology at Wesleyan University, Middletown, Conn. Cloth, $2.75 net.

Please send me the books checked (✓) and charge to my account:

FOOD AND BEVERAGE ANALYSES

By Milton Arlanden Bridges, B.S., M.D., F.A.C.P.
Director of Medicine, Department of Correction Hospitals, New York; Consulting Physician, Seaview Hospital, Staten Island, New York; Assistant Clinical Professor of Medicine and Lecturer in Therapeutics, New York Post-Graduate Medical School, Columbia University; etc.
Octavo, 248 pages. Limp binding, $3.50, net.

This book is unique in the multiplicity of food analyses that it contains. They cover nutritive, mineral and vitamin values. This compilation is the most complete as well as the most extensive of its kind ever published. Here, for the first time, are presented analyses of the standard commercial foods, a feature heretofore unavailable in any textbook. These analyses have been checked and rechecked and whenever a question of validity has arisen, independent analyses have been made. This book should find a place in every hospital library, in every diet kitchen and as a textbook for all students of nutrition and home economics. It will appeal to every intelligent layman who is food conscious.

Project Polarized Light Experiments
Simply—at Low Cost

with POLAROID

The polarization of light is now as easily controllable as its color. Polaroid—the new light polarizer—is

LOW IN COST

AVAILABLE IN UNLIMITED SIZES

IT POLARIZES BY SIMPLE TRANSMISSION

Experiments previously omitted because of the limitations of the Nicol prism are now easy and inexpensive.

With Polaroid and only the simplest equipment, you can project the interference patterns of crystals, cellophane, and other crystalline films; strain patterns in glass, celluloid and other photoelastic materials. You can set up polarimeters, convert standard microscopes into polarizing instruments, build color matchers, light-intensity controls, glass cells, Kerr cells for television and facsimile work.

PROPERTIES—Polarizes visible light as effectively as the Nicol prism except for barely perceptible traces of inefficiency at the ends of the spectrum where the sensitivity of the eye is low. Structure invisible at 1000 magnifications. Unaffected by age, vibration, ultraviolet light, temperatures to 250° F. Transparent to infra-red—no water-cells required. Easily cleaned glass surfaces. Uniform polarization over entire area by simple transmission.

PRICES—4 cm. clear diam. in moulded rim, $5.00 each—other sizes in discs and large sheets available on special order for immediate delivery.

The POLAROID Corporation
DIVISION 51
168 DARTMOUTH ST., BOSTON, MASS., U.S.A.

SPECTRUM PROJECTION APPARATUS

An ideal equipment for lecture room use. Many useful experiments can be clearly demonstrated in an interesting and instructive manner. Suitable for use before large groups as continuous spectrum lengths up to 2 meters may be projected from a distance of 10 meters.

A rotatable disc with four filters,—red, blue, green, didymium,—and a clear aperture, is used with a plano-convex lens and liquid prism to demonstrate the absorption of various parts of the spectrum. The didymium filter shows an especially impressive absorption band. Absorption of liquids can be observed by use of an absorption cell. Selective reflection is vividly demonstrated by projecting the spectrum on colored cards.

Complete for use on 110 volts A.C. $80.00, f.o.b. Chicago.
Absorption cell for liquids, with support $  8.00

Price and details of projection screens on request.

Gelatine Injected Dogfish

at our

Usual Low Prices

Gelatine injection mass gives a uniform filling of the smaller vessels which is far superior to that obtained with other types of mass.

Low prices result from our policy of preparing dogfish material only on advance orders placed during the summer for summer or fall delivery.

The highest quality is maintained with rigorous rejection of defective specimens at each stage of the preparation and before packing.

Males and females are included in approximately equal numbers on each order.

Price List, Summer, 1936

Cleaned skulls: dogfish or skate, $1.25 each; with arches, dogfish, $2.50 each.

Dogfish embryos, fixed in Bouin's fluid, all sizes, 0 to 25 mm., $.50 each. We prepare microscope slides of dogfish embryos at reasonable prices. Write us about your requirements.

† The hepatic portal system of double and triple injected dogfish is injected with a starch mass containing formalin to harden the liver.

* Triple injected skates have the ventral aorta injected instead of the systemic veins.

The above prices for single specimens indicate the rate which holds for orders of any size. They are F. O. B. Portland, Maine, and do not include the cost of shipping containers. We recommend that orders be placed as early in the summer as possible.

You are Cordially Invited
to visit the new Home of the WILL CORPORATION when in Rochester, N. Y., for the Summer Meeting of the American Association for the Advancement of Science—June 16–18.

We welcome the opportunity of taking you “behind the scenes” to show you the time and effort expended that you may have service of the type to which you are rightfully entitled.

You will find this intimate contact with the WILL CORPORATION of value to you. A complete understanding of the services we are prepared to render will be of material help in solving your laboratory supply problems. Our plant at 39–51 Russell Street is located just off University Avenue, but a few blocks beyond the Women’s College of the University of Rochester.
Some Outstanding Textbooks in GEOGRAPHY

COLLEGE GEOGRAPHY
By EARL C. CASE, Professor of Geography, and D. R. BERGSMARK, Assistant Professor of Geography; both at the University of Cincinnati.

A survey textbook emphasizing the regional and economic phases of geography. The scope of this book is extremely wide. The style is lucid and direct; the maps, graphs and pictures exceptionally clear. "Case and Bergmark" is rated by many as "the best college text in world geography that has yet been published."

700 pages 6 by 9 $4.50

GEOGRAPHY OF NORTH AMERICA
By GEORGE J. MILLER, Head, Department of Geography, State Teachers College, Mankato, Minnesota, and ALMON E. PARKINS, Professor of Geography, George Peabody College for Teachers, Nashville, Tennessee.

This standard textbook is noted for the practical organization of its subject matter, the clear presentation of facts backed by well-chosen statistical material, and the inclusion of new material covering advances in geographical knowledge. The illustrative tables and charts have received especial commendation. Fifty-seven colleges used this book during the current school year, showing the extent of its popularity.

Second Edition 632 pages 6 by 9 $4.50

Laboratory Manual in the Geography of North America
By FLOYD F. CUNNINGHAM, Professor and Head, Department of Geography, State Teachers College, Florence, Alabama.

Second Edition 49 pages 9½ by 12½ $1.25

PRINCIPLES OF HUMAN GEOGRAPHY
By ELLSWORTH HUNTINGTON, Research Associate in Geography, Yale University, and SUMNER W. CUSHING, late Head of the Department of Geography, State Normal School, Salem, Massachusetts.

"Huntington and Cushing" has been consistently popular with teachers and students of college geography since the publication of the first edition in 1920. This fourth edition, published in 1934, is no exception: One hundred ten colleges are now using it. As a modern study of geography, especially as it deals with man's relationship to the physical world about him, this book is considered without an equal.

Fourth Edition 467 pages 6 by 9 $3.00

ECONOMIC AND SOCIAL GEOGRAPHY
By ELLSWORTH HUNTINGTON, FRANK E. WILLIAMS, Professor of Geography, Wharton School of Commerce and Finance, University of Pennsylvania, and SAMUEL VAN VALKENBURG, Associate Professor of Geography, Clark University.

A steadily increasing number of adoptions indicates the trend toward this book. Teachers commend it for its thoroughness, the excellent maps, enjoyable style and splendid organization. An unusually adaptable textbook for classes in general geography, human geography, economic, and commercial geography.

630 pages 6 by 9 $3.75

EUROPE

By SAMUEL VAN VALKENBURG and ELLSWORTH HUNTINGTON.

Here is a book on the geography of Europe which teachers have hailed with delight as a distinctive contribution to the literature of the subject. Professor Gordon G. Darkenwald, of Hunter College of the City of New York, wrote, in Science, "The book written by Van Valkenburg and Huntington, with its well-balanced physical, economic and cultural approach, is the most readable and teachable geography book on Europe."

651 pages 6 by 9 $4.50

JOHN WILEY & Sons, Inc., 40 Fourth Avenue, New York
Important New McGraw-Hill Books

Hill, Overholts and Popp—Botany. A Textbook for Colleges

A new, up-to-date textbook for a two-semester college course in general botany, giving clear, complete explanations without over-simplification. Part I considers the physiology of an organ in connection with its structure and morphology. Part II discusses the different groups of plants.

Eames—Morphology of Vascular Plants. Lower Groups—Psilophytales to Filicales
By Arthur J. Eames, Cornell University. McGraw-Hill Publications in the Agricultural and Botanical Sciences. 420 pages, $4.00

Emphasizes broad comparative study of the various groups of vascular plants, with the development of a natural classification and of phylogenetic relationships as a goal.

Finch and Trewartha—Elements of Geography
By Vernor C. Finch and Glenn T. Trewartha, University of Wisconsin. McGraw-Hill Series in Geography. 769 pages, $4.00

The first volume in the McGraw-Hill Series in Geography. The chief merit of the treatment lies in the choice of material, in the structure of its organization, and in the manner of its presentation.

Shull—Evolution
By A. Franklin Shull, University of Michigan. McGraw-Hill Publications in the Zoological Sciences. 312 pages, $3.00

A readable general treatment of evolution from the viewpoints of the outdoor naturalist who presents phenomena to be explained, and of the laboratory worker who would interpret them.

Holmes—Human Genetics and Its Social Import
By S. J. Holmes, University of California. 410 pages, $3.50

Aims to acquaint the student of eugenics with the basic principles of heredity and to show their application to social problems.
