Cenco-Sealstix
THE IMPROVED DE KHOITINSKY CEMENT
A SUPERIOR CEMENT and sealing medium for innumerable laboratory and shop applications. Firmly unites materials such as quartz, glass, metal, wood, etc. Resistant to most common reagents. High insulation value. Odorless. Low vapor pressure. Withstands frequent reheating. Does not deteriorate with age. Excellent for connections and repairs of high vacuum systems. Sold in sticks weighing about 1 ounce each, with directions.

Per Stick 75¢—Per Dozen Sticks $8.10

CONSTANT TEMPERATURE WITHIN
±0.01°C
COMPLETE VISIBILITY OF IMMERSED VESSELS OFFERS A MAXIMUM ACCURACY

SARGENT CONSTANT TEMPERATURE WATER BATH
(Patents applied for)

In addition to the high degree of accuracy in temperature maintenance and to visibility of immersed vessels, there is the assurance of reliable, consistently accurate operation over extended periods, an operating efficiency which depends upon the Sargent Zero Current Relay Unit; and there is available comparatively larger working areas, a condition resulting from the concentration of heating and circulating facilities.

The Sargent Zero Current Relay Unit permits such a negligible current (five one hundred millionths of an ampere) to flow through the regulator contacts that the convenient type of regulator which operates in the atmosphere may be used without occasioning deterioration of regulator contacts and without a consequent progressive loss of accuracy.

Effective concentration of heating and circulating facilities into a correctly engineered, compact central unit leaves 90% of the surface area and 95% of the wall area unobstructed for work. This central unit is so designed that heat is introduced at the point of most rapid circulation, an arrangement which results in a uniformity of temperature throughout the bath wherein there can be detected no temperature variation above 0.01°C. This degree of accuracy is guaranteed.

The Sargent Constant Temperature Water Bath is complete with the Sargent Zero Current Relay Unit, regulator, central circulating and heating unit with a shaded pole induction type motor, cooling coil, constant level device and a special molded Pyrex glass container.

For conditions requiring maintenance of only one temperature a simplified regulator permanently adjusted to any specified temperature may be supplied.

**Low Cost—Large Area Light Polarization**

Polaroid Disks

Two pair of Polaroid Disks with axes at various angles showing degrees of light absorption.

For polarizing light for carrying out demonstrations and experiments on the nature and applications of polarized light. Large scale projections not possible with Nicol prisms are easily accomplished by the use of these disks. The disks also find application in the construction of devices in which specular reflections need be intensified or eliminated, or in which transparent specimens reveal characteristics through their polarization of transmitted light. The polarizing plates of these disks consist of a specially-processed cellulose film mounted between two plates of glass. These plates are mounted in molded rims to give a clear diameter of 4 cm, which is over three times that of the largest Nicol prisms regularly listed. Uniform polarization of visible light, more than 99 1/4% perfect, is secured over the entire area. The polarization is complete except at the extreme ends of the visible spectrum, where eye sensitivity is low.

Have You Seen the **BEAVER**?

This modern dissection knife consists of two simple parts: a replaceable blade, of surgical grade; a stout handle of stainless steel.

Those parts ingeniously interlock to provide all the rigidity of a one-piece tool. Yet the blade can be changed in two seconds.

Beaver Blades...of different shapes...have the keenest edge known to surgical steel.

**TRIAL SET SENT ON APPROVAL**

If you would like to try this knife, send for set No. 1218, including handle, dummy blade, and packet of six assorted blades.

Postpaid for $1.75.

Use any or all of the blades with our compliments. If you are not enthusiastic, return the handle for full credit.

**WHATMAN FILTER PAPERS**

*the choice of Fertilizer Chemists*

The maintenance of Fertilizer standards presents a three fold problem. Not only buyer and seller but the laboratories of State and Federal agencies must agree on analyses.

WHATMAN Filter Papers have for years been popular with Chemists analysing Fertilizers in laboratories of Factories, Referee Chemists and Experiment Stations.

Phosphoric Acid in its various forms, Potash and other constituents of Fertilizers are determined with the aid of WHATMAN Filter Papers because they are uniformly reliable, immediately available and modestly priced.

Standardize your laboratory on WHATMAN and forget Filter Paper troubles.

Space Saving Furniture that will solve your Crowded Classroom PROBLEM

Lincoln Science Desk
No. D-503

If your laboratory classrooms are crowded, check up on your laboratory furniture. Today such furniture as Kewaunee's Lincoln Science Desks makes possible larger classes in the same rooms, more efficient handling of classes, more efficient work by students and all day use of laboratory classrooms.

Write us today for full particulars about Lincoln Science Desks and other space saving furniture for laboratory, home economics and vocational classrooms. Floor plans and engineering service offered without charge to interested parties.

Often Cut Laboratory Feeding Costs

PURINA Laboratory Chows cost less than the stock rations used by many laboratories. They almost always reduce labor costs, since they are ready-prepared and may be fed more quickly and easily. Why not investigate this two-fold possibility for a saving in your laboratory?

MODERNIZE YOUR POTENTIOMETER for GLASS ELECTRODES

Made in U. S. A.

The Hellige Vacuum-Tube Galvanometer is a separate, independent unit, which may be combined with any type of potentiometer, whether it be a home-made slide wire or the most refined precision instrument—also irrespective of whether it reads in pH units or in volts. Detects 0.1 milli-volt through resistances as high as 10,000 megohms. Universally Applicable.
