Science and the Rational Animal: Dr. Max Mason 71

Obituary:
Franklin Davis Barker; John J. Schoonhoven; S. N. L.; Recent Deaths 76

Scientific Events:
A New British Survey Ship; Grants of the Geological Society of America; The King of England’s Birthday Honors; Grants of the Rockefeller Foundation for Public Health and Medical Service 77

Scientific Notes and News 80

Discussion:

Scientific Books:
A Survey of Feeling and Emotion: Dr. Joseph Jastrow 85

Special Articles:
Environmental Conditions and the Wasting Disease of Eel-grass: Dr. Neil E. Stevens. Regarding the General Nature of Catheptic Enzymes: Drs. Max Bergmann and Joseph S. Fruton. Concentration and Partial Purification of Bacteriophage: Dr. John H. Northrop 87

Scientific Apparatus and Laboratory Methods:
Simple Synchronous Motor for the Harvard Kymograph: Dr. N. W. Roome. The Culture of a Free-living Nematode and its Use as Classroom Material: Reginald Heawood. Visible File for Lantern Slides: Dr. E. L. Lazier 91

Science News 6

SCIENCE: A Weekly Journal devoted to the Advancement of Science, edited by J. McKeen Cattell and published every Friday by THE SCIENCE PRESS New York City: Grand Central Terminal Lancaster, Pa. Garrison, N. Y. Annual Subscription, $6.00 15 Cts. SCIENCE is the official organ of the American Association for the Advancement of Science. Information regarding membership in the Association may be secured from the office of the permanent secretary, in the Smithsonian Institution Building, Washington, D. C.

SCIENCE AND THE RATIONAL ANIMAL

By Dr. Max Mason

President of the Rockefeller Foundation

The celebration of one’s birthday, after a certain age, is probably sound psychoprophylaxis, but can hardly be met with unmixed feelings, even though “The Old Gray Mare” is not made the theme song of the occasion. One does not wish to be reminded of the passing of the milestones on a journey that is short and filled with interest and happiness. In early youth, however, the view is all to the future. At sunrise the mind and heart are absorbed with the joy of planning the day to come.

We are met to celebrate the fiftieth birthday of Sigma Xi, an institution which need never grow old and which now, on the time scale of the history of the race, is an infant drawing its first breath. Our interest to-night is in its meaning for the future rather than in its brief past—it meaning as a symbol of the devotion of countless thousands and of countless millions to come to the life of science and to their faith in the scientific way of life. These are not mere phrases. There is a life of science in which we are united by fellowship in effort. There is a scientific way of living, and its attainment is the aim of all the sciences.

In accurate scientific knowledge there is power—power, as has been amply demonstrated, to release man from physical drudgery; power to release man from fear, that child of uncertainty, as he learns the story of the universality of natural law; power to determine his destiny as he understands himself to be a product of evolutionary processes and learns the psychological and physiological factors which condition his personality; power to give him peace and courage for life
