New Books On Chemistry

Hackh—Chemical Dictionary. 2nd Edition
This work has been completely revised and reset to include the vast progress in all branches of modern chemistry. It contains 230 more pages of new material; nearly 10,000 new definitions bringing the total close to 50,000 terms, defined and pronounced; nearly 100 new and original tables; 477 short biographies of chemists representing 29 nationalities. New illustrations, new diagrams; every item revised and rechecked from “A” to “Zymurgy.”

1030 Pages. Beautiful, Sturdite Washable Binding. $12.00

Fowles—Lecture Experiments in Chemistry
This new book consists of over 600 experiments with clear instructions for carrying them out. Many of them make their appearance for the first time in English. They are placed against a background of teaching motives and methods (rather than being grouped under a few familiar elements) thus rendering the book of exceptional value to the teacher.

150 Illustrations. Tables. Appendices. 564 Pages. $5.00

Wertheim—Laboratory Guide for Organic Chemistry
This book presents experimental material for a year’s course in elementary organic chemistry. It is especially designed for students majoring in chemistry or those following the engineering or premedical curriculum.

24 Illustrations. 524 Pages. Heavy Paper Covers. $2.00
By E. Wertheim, Ph.D., Professor of Organic Chemistry, University of Arkansas.

Hawk and Bergeim—Practical Physiological Chemistry. 11th Edition
Due to the profound advances made in certain phases of biochemistry, several portions of this work have been entirely rewritten. These include the chapters on Vitamins and Deficiency Diseases; Enzymes and their Action; Endocrine Organs; Protein Metabolism; Fat Metabolism; Carbohydrate Metabolism; Inorganic Metabolism; Salivary Digestion; Gastric Digestion; Pancreatic Digestion; Intestinal Digestion; Bile; Putrefaction and Detoxication; Blood and Tissue Analysis; Teeth, etc.

2 Absorption Plates. 5 Color Plates. 82 Text Figures. 936 Pages. Washable Sturdite Binding. $8.00
By P. B. Hawk, Ph.D. (Food Research Laboratories, Inc., N. Y.) and Prof. Olaf Bergeim, M.Sc., Ph.D. (University of Illinois). With Co-operation of Bernard L. Oser, M.Sc., Ph.D. (Director, Food Research Laboratories, Inc., N. Y.) and Arthur G. Cole, Ph.D. assistant Professor of Physiological Chemistry, University of Illinois Medical College.

Some Fundamental Aspects of the Cancer Problem

Symposium sponsored by the Section on Medical Sciences at Atlantic City, N. J., published under the direction of the following committee of workers in medical science: William Charles White, Chairman; Vincent du Vigneaud, C. C. Little, Esmond R. Long, and Carl Voegtlin. Edited by Henry B. Ward. These papers bring out the advances recently made in cancer research by leading investigators along the three main approaches to the problem: biology, chemistry and physics. A summary of the papers will be found in Science for February 5, 1937.

Price, cloth, $2.50; paper, $2.00

Journal of Cellular and Comparative Physiology

Published bimonthly by The Wistar Institute
E. Newton Harvey, Managing Editor, Princeton University

Vol. 10 Contents for October, 1937 No. 3

W. Kempner. Effect of oxygen tension on cellular metabolism. Four text figures.
E. W. Lowrance. Effect of temperature gradients upon polarity in eggs of Fucus furcatus. Two text figures.
G. Saslow. Oxygen consumption and respiratory quotient of caffeinized frog muscles. One text figure.
D. Mazia. The release of calcium in Arbacia eggs on fertilization.
K. S. Cole and T. L. Jahn. The nature and permeability of grasshopper egg membranes. IV. The alternating current impedance over a wide frequency range. Two text figures.
C. Haywood and R. Hober. The permeability of the frog liver to certain lipid-insoluble substances.
C. R. Schmidt and A. C. Ivy. The general function of the gall bladder. Do species lacking a gall bladder possess its functional equivalent? The bile and pigment output of various species of animals.

Current physiological literature.

This journal is issued on the 20th day of February, April, June, August, October, and December. Not more than two volumes will be issued in 1937.
Price per volume of 500 pages, $5.00 in the U. S.; $5.50 in other countries.
Volumes 1 to 9 are still available. Special prices on request.

Because the basic principle in science is to see and interpret, the modern laboratory must provide an abundance of objective material designed to initiate as well as verify concepts. The Chicago Apparatus Company anticipates this need and offers reliable biological laboratory equipment and supplies embodying the very latest improvements and finest quality. Marine and Inland Plants and Animals are prepared in specimen jars to afford full vision... Skeletons are expertly prepared in our own laboratory in any standard mounting desired for individual requirements... Zoological and Plant models are American made and constantly on supply. Patten Chick Embryo Models, designed by an American authority for American institutions, are available in a series of seven critical stages in chick embryology: 18-hour (the primitive streak) to the 96-hour stage. These are just a few of the thousands of items listed in the latest catalog—No. 47. Write for yours today.

Illustrated: Patten Chick Embryo Model—44-hour stage.

SHARP!... and stays sharp under hard use

EMPIRE-HUETTNER Micro-Knife

Now in use in over 300 laboratories, the Empire-Huettner Microtome Knife is made especially for microtomy. It is 40 mm. long and 5 mm. at the base. Even a novice can learn to strop this knife!

Empire-Huettner Micro-Knife in Holder

The holder assures the maximum safety to the edge of the knife, protecting it even if dropped. Further, it protects the operators against possible cuts.

Empire-Huettner Micro-Knife in Sheath

Each blade is supplied with a metal sheath. This further protects the blade, whether in the holder or separate. The entire outfit may be safely carried in a coat pocket.

Blade Shown with Metal Case

The low cost and the obvious advantages of the Empire-Huettner Micro-Knife make it desirable that you have at least one complete outfit in your laboratory now!

IMPORTANT

We resharpen blades for the Empire-Huettner Micro-Knife 25¢ each . . . 24 hour service

Empire-Huettner Microtome Knife Complete (holder, two blades, strop, automatic stropping manipulator, and back for stone sharpening) $10.75

For complete details address EMPIRE Laboratory Supply Co., Inc. 507-559 West 132nd Street, New York

Bacteria free filtration

JENA Fritted Glass Filter Funnels

These funnels are made with a layer of #5 porosity with an average pore diameter of 1.5/1000 mm., over a disc of #3 porosity. They are being used successfully for bacteria free filtration of broths containing Bacteria coli, Bacteria dysenteriae, Vibrio cholerae, and numerous other organisms.

DARKFIELD CONDENSERS

for every type of ultra-microscopy

SPECIAL MODELS

[A] for low magnifications: dry condensers with long working distances.

[B] for oil immersions: especially suited for study of colloidal solutions.

[C] for quick change from brightfield to darkfield.

[D] for colloidal suspension in liquids of higher refractive indices: the maximum numerical aperture of the observation system can be as high as 1.40.

NEW! MINIATURE CIRCUITING PUMP

For Circulating Constant Temperature Water or Oil Through Refractometers, Condensers, Etc.

- Light, compact and readily portable—they weigh only 10 lbs. and measure only 4 x 8 x 15 in.

- Immersion or table mounting models. Immersion model available with laboratory support rod mounting as illustrated, or with ‘‘C’’ clamp mounting for clamping to any bath wall up to 3 in. thick.

MEASURING THERMAL EMF ON A K-2 POTentiOMETER

THE calibration of Rayotubes (L&N radiation pyrometer elements) is a temperature-measuring operation having several features of interest to those engaged in the accurate measurement of thermal or other emf.

A Rayotube generates an emf dependent upon the average temperature of the area at which it is pointed. In calibrating, the instrument is pointed at an oxidized nickel plate within an electric furnace. The plate temperature is measured with a standard platinum, platinum-rhodium thermocouple. Both couple and Rayotube are connected to a reversing switch, whose leads run to a Type K-2 Potentiometer. By measuring thermocouple and Rayotube emfs in quick succession on the K-2, the Rayotube emf for any temperature may be determined. Such a calibration is not only ample for the most accurate industrial equipment, but for a large majority of laboratory applications as well.

The success of this calibrating method is obviously due, in great measure, to the speed and convenience of the K-2 Potentiometer. These same features adapt the instrument to a wide variety of other voltage measurements such as resistance drops, pH and oxidation-reduction potentials, and any other quantity which can be reduced to a difference in potential. We are always glad to be consulted about the adaptability of the K-2.
that the detailed manipulations of the process require infinite care and patience and that there are still many difficulties to be overcome before the process can be labeled "fool-proof." It may be possible to polymerize small-sized samples in several hours, just as it is possible to polymerize a thin film within a matter of minutes, but when dealing with larger, more practical specimens successful polymerization will often require a period of weeks, during which time the process becomes increasingly more difficult. So far, we have also found that only relatively dry materials can be successfully mounted in methyl methacrylate. In some cases where the water content is not excessive it is possible to coat the specimen with gelatin before imbedding, but our results using gelatin for this purpose have not been entirely satisfactory. Attempts to imbed fresh flowers and leaves in methyl methacrylate, using either benzoyl peroxide or sulfur trioxide as the catalyst, have resulted in color loss. Furthermore, iridescent butterflies do not lend themselves readily to the imbedding process, at least not without some sort of protective coating, since such specimens lose their iridescent effect, owing to the fact that this phenomenon is caused by a structural or grating effect and not to the presence of actual pigment. However, unusually attractive and pleasing mounts in methyl methacrylate have been made of such butterflies, by a process which prevents actual contact between the methyl methacrylate and the specimen.

We anticipate that both the Fessenden and the methacrylate mounts of biological materials will possess considerable value for exhibit and other educational purposes and as permanent records of healthy and abnormal specimens. It is highly important, therefore, that the imbedded specimen retain its natural shape, size and color and that the finished mount be free of imperfections, including cloudiness, bubbles, color deterioration and alterations such as "crazing" in the plastic itself.

Until now, the Bureau of Chemistry and Soils has considered premature any announcement as to methods and results of this research project, since many undetermined factors and problems connected with the work remain to be studied and overcome. When the final details and directions for the successful mounting of biological specimens in plastics are worked out, a full and comprehensive report will be forthcoming.

A HYDRO-AGITATOR FOR SOLUTIONS

Suitable agitation of a solution over a period of days for decalcification of bone, etc., is effected by securing a cylindrical half-liter bottle three fourths full of the solution on the hooks in the illustration, so that half the bottle is below the pivotal center. A stream of water at the rate of four gallons an hour tips the pans alternately twice a minute, which we find sufficient to decalcify bone tissue embedded in nitrocellulose blocks, and placed first in a solution of nitric acid followed by a 3 per cent. solution of alum.

The table is wood with steel legs, the upright supports for the pivot are steel, and the pans are copper, all scrap material from our shop, constructed in a half day. The apparatus may be made to any scale desired, or the height of the pivot may be increased so as to extend the arc of rotation of the pans. The figures are dimensions in inches.
