UP-TO-DATE SAUNDERS TEXTBOOKS

HEILBRUNN'S GENERAL PHYSIOLOGY
Brand New! By L. V. Heilbrunn, Associate Professor of Zoology in the University of Pennsylvania. Octavo of 603 pages, illustrated. Cloth, $5.00 net.

SCHNEIDER'S PHYSIOLOGY OF MUSCULAR ACTIVITY
By Edward C. Schneider, M.P.E., Ph.D., D.Sc., Professor of Biology at Wesleyan University, Middletown, Connecticut. 12mo of 401 pages, illustrated. Cloth, $2.75 net.

CRANDALL'S HUMAN PHYSIOLOGY
By Lathan A. Crandall, Jr., M.D., Ph.D., Associate Professor of Physiology and Pharmacology, Northwestern University Medical School. 12mo of 325 pages, illustrated. Cloth, $2.00 net.

DREW'S INVERTEBRATE ZOOLOGY
Fifth Edition. By Gilman A. Drew, Ph.D. Revised by James A. Dawson, Ph.D., Associate Professor of Biology, and Leonard P. Sayles, Ph.D., Assistant Professor of Biology, The College of the City of New York. 12mo of 276 pages. Cloth, $2.25 net.

BOGERT'S FUNDAMENTALS OF CHEMISTRY

HARROW & SHERWIN'S BIOCHEMISTRY
By 30 Teachers. Edited by Benjamin Harrow, Ph.D., Associate Professor of Chemistry, The City College of the City of New York; and Carl P. Sherwin, M.D., Sc.D., D.P.H., LL.D., Member of the Staff of St. Vincent's and French Hospitals, New York City. Octavo of 797 pages, illustrated. Cloth, $6.00 net.

FROBISHER'S FUNDAMENTALS OF BACTERIOLOGY

GREAVES' ELEMENTARY BACTERIOLOGY
Third Edition. By Joseph E. Greaves, M.S., Ph.D., Professor of Bacteriology, Utah Agricultural College; and Ethelyn O. Greaves, M.S., Ph.D. 12mo of 562 pages, 147 illustrations. Cloth, $3.50 net.

HILL'S HISTOLOGY & ORGANOGRAPHY

MARSHALL'S HUMAN ANATOMY
By Clyde Marshall, M.D., Department of Anatomy, Yale University. 12mo of 385 pages, 252 illustrations. Cloth, $2.50 net.

W. B. SAUNDERS COMPANY, W. Washington Square, Philadelphia

NEW WORK JUST READY

CLINICAL PARASITOLOGY
By Charles Franklin Craig,
Col., U. S. Army (Retired), F.A.C.S., F.A.C.P.
Professor of Tropical Medicine
and Ernest Carroll Faust, M.A., Ph.D.
Professor of Parasitology
The Tulane University of Louisiana, New Orleans, Louisiana.

Octavo, 733 pages, illustrated with 243 engravings.
Cloth, $8.50, net.

This volume has been designed to meet the need for authoritative information required by the increasing importance of parasites as etiological agents of human disease. It presents in concise form the essential facts and the symptoms with approved methods of diagnosis, treatment and control of the diseases which they produce. The authors are recognized authorities who cover both the theoretical and practical problems.

LEA & FEBIGER
WASHINGTON SQUARE

A Stereoscopic Atlas of the Chick
By Drs. J. A. Long and Paul L. Burlingame
University of California, Berkeley

Consists of 133 three-dimensional photographic prints of stages from the primitive streak to the fourth day of incubation, both of whole embryos and of progressive stages of dissection. Very valuable material for prolonged study and largely replaces the use of sections. Price, complete with stereoscope and box, $7.35 delivered. Sent on approval.

OCCASIONAL PAPERS OF THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

The Scientific Aspects of Flood Control

Three illustrated papers presented at the Rochester meeting of the Association in cooperation with the Ecological Society of America, by F. A. Silcox, Chief of the U. S. Forest Service, Dr. W. C. Lowdermilk, Associate Chief of the Soil Conservation Service, and Dr. Morris L. Cooke, Chief of the Rural Electrification Administration. These three papers present the serious problems arising from failure to control flood waters at their source and the soil erosion resulting from this neglect, and the steps that are being taken towards permanent control.

Price prepaid 50 cents

Some Fundamental Aspects of the Cancer Problem

Symposium sponsored by the Section on Medical Sciences at Atlantic City, N. J., published under the direction of the following committee of workers in medical science: William Charles White, Chairman; Vincent du Vigneaud, C. C. Little, Esmond R. Long, and Carl Voeglin. Edited by Henry B. Ward. These papers bring out the advances recently made in cancer research by leading investigators along the three main approaches to the problem: biology, chemistry and physics. A summary of the papers will be found in Science for February 5, 1937.

Price, cloth, $2.50; paper, $2.00

CYLINDRICAL MUSEUM JARS

Made of clear, heavy glass without constriction at the neck so that the width of the mouth is the same as the inside diameter of the body of the jar.

The contents are enclosed entirely in glass, with a rubber gasket between cover and jar to make a tight joint. A metal clamp with screw fastener maintains a secure seal and at the same time offers ready accessibility to the material or specimen without the difficulty of opening a permanent closure as is the case with the ordinary rectangular museum jar.

On the under side of the cover are two glass rings, from which specimens may be suspended so that they will stay in any desired position.

10222—Museum Jars, as described above:

INDICATORS

The Coleman & Bell Company
manufacture a complete list of in-
dicators including all of the com-
mon indicators used in analytical
and biological work, the hydrogen-
ion indicators recommended by
Sorensen and Clark & Lubs, and in
addition many rare indicators suit-
able for special work. These indi-
cators are available in both the
dry form and in solution, ready to
use. Certain indicators are offered
in the form of Test Papers in vials
containing 100 strips, and in sheets
8" x 10".

Manual of the
Southeastern Flora
(ILLUSTRATED)

Being Descriptions of the Seed-Plants growing
naturally in North Carolina, South Carolina,
Georgia, Florida, Alabama, Mississippi, Tennes-
see and Eastern Louisiana

By JOHN KUNKEL SMALL

This Manual replaces the author’s Flora
of the Southeastern United States, published
in 1903 (second edition 1913), for
the Southern States east of the Mississippi
River. It embodies the results of con-
tinued exploration and study, thus bring-
ing up to date our knowledge of this floral
region.

There are xxii + 1554 pages and over
1500 illustrations, one illustration of a
species of each genus.

Price $10.50 Postpaid

HIGH-VACUUM and GREAT EXHAUSTION SPEED

A Single-Cavity Duo-Seal two-stage Vacuum Pump that has many obvious advantages.

Large evacuating capacity—28 liters per minute.
Internal-Vane construction insures long life and continued high vacuum performance.—Positive oil seal—impossible for any oil to back into evacuating line or chamber.—High-Vacuum—all pumps tested to 1 micron (.001 mm).

1406 DUO-SEAL PUMP, ONLY. Not mounted on base. Complete with pressure gauge, 9-inch grooved pulley for special "V" grooved belt, supply of oil and directions for use but without belt .................. $45.00

1406F DUO-SEAL PUMP, Motor-Driven. Mounted on cast iron base with motor with "V" belt and belt tightening device, six feet of connecting cord, snap switch and attachment plug. For 110 Volts D.C. .... $87.50

Write for complete booklet giving the Bureau of Standards tests, operation curves, diagrams, specifications, and numerous applications to vacuum technique.

Established 1880. Scientific Instruments
Pump No. 1406 Patent Pending

CHICAGO, ILL., U. S. A.
The B & L Type H Microscope fills an important place in modern biological and medical work.

The combination of precision optical parts with mechanical construction of corresponding accuracy results in a microscope competent to handle the entire range from routine to research. The same optical performance required in critical research is available in the class room and equally desirable for routine work. A wide range of accessories fit the standard models for specialized applications. Accordingly, the B & L Type H Equipment can be selected with assurance that it will not be out-grown, and its optical excellence will be a source of satisfaction in whatever work is undertaken.

Write for Catalog D-185 which lists and describes the H Series, Bausch & Lomb Optical Co., 642 St. Paul St., Rochester, N. Y.
this is practiced, however, it will be found that in a certain percentage of cases air will be imprisoned in the upper coils of the cochlea and at the apex of the semi-circular canals, thus leading to an imperfect cast. If a positive pressure is applied to the molten metal in the labyrinth the air is forced out through the pores in the bone and the canals completely filled with the metal, giving a true cast of the interior.

A piece of rigid tubing 2 or 3 inches in length is placed with one end over the fenestra rotunda and fenestra ovalis and a piece of 1-inch adhesive applied to the outer surface of the tube to hold it to the bone and to cover the openings resulting from the inequalities between their respective surfaces. Plaster of paris is next applied to the outer surface of the adhesive, bone and tube to seal their union. A piece of adhesive is placed over the internal auditory meatus and the entire petrous bone is covered with a thick layer of the plaster, leaving only the upper end of the tube projecting from the mass. After hardening, the mass is placed in a sand bath with only the upper inch of the tube above the sand, which is heated to 110°–120° C. Molten Wood's metal is now poured into the tube, almost filling it. A rubber cork previously bored to fit this tube is fitted over its upper end and pressure is applied by manually compressing an atomizer bulb the tube of which is adapted to the upper opening in the rubber cork. While the pressure is being applied the whole mass is removed from the sand bath and immersed in cold water. The plaster is immediately removed and the petrous bone with its attached tube is placed in 15 per cent. HCl until decalcification is complete. The organic matter can then be washed from the cast. The sprue interconnecting the labyrinth and tube is carefully cut across. If desired, the Wood's metal cast may be plated or invested in plaster and recast in any of the harder metals, giving a much more durable preparation.

M. Wharton Young

DEPARTMENT OF ANATOMY, HOWARD UNIVERSITY

DIOXAN AS A FIXATIVE OF YOLK

Dioxan has been known from the first publication of Graupner and Weissberger 1 as a very economical and convenient dehydrating agent. McWhorter and Weier 2 recommended its use as an admixture to the fixing fluids, Graupner and Weissberger 3 gave the description of a fixative consisting chiefly of dioxan. Nobody, however, as far as I know has remarked the advantages which result from the fixing of embryonal tissue solely by means of it.

The pieces of tissue to be fixed in dioxan are simply thrown into a container of that liquid, at the bottom of which lies a layer of calcium chloride. Such an arrangement has been devised for the dehydrating technique by Graupner and Weissberger. 4 After lying for a certain time in dioxan, the duration depending on the size of the piece of tissue, the material is transformed to a mixture of dioxan (5 parts), soft paraffin (5 parts) and xyloc (1 part), heated to 37° C. 5 The tissue is then placed in hard paraffin, in which it becomes embedded.

The principal advantage of this method consists in the fact that any hardening of embedded embryonal tissue is thereby completely avoided. Consequently the cutting of the paraffin blocks is considerably facilitated. As is well known it is rather difficult to cut the eggs of frogs, as also the young frog embryos.

The pieces of the ripe ovary of Rana esculenta, having been fixed in dioxan as described above, cut as easily as blocks of pure paraffin; the same applies to the young frog embryos. It must be emphasized that all the histological stains hitherto tried (hematoxylin, eosin, Van Gieson's solution, etc.) have successfully colored tissues fixed in dioxan. In conclusion it is to be noted that the use of dioxan for fixing can facilitate many embryological sections.

H. Szarski

DEPARTMENT OF COMPARATIVE ANATOMY, JAGELLONIAN UNIVERSITY, KRAKOW, POLAND

BOOKS RECEIVED

Four Important New Books

**Hunt and Garratt—Wood Preservation**

By George M. Hunt, In Charge, Section of Wood Preservation, United States Forest Products Laboratory, and George A. Garratt, Yale University. 443 pages, $5.00

This new book fills a definite need for an up-to-date text and reference book covering the various aspects of the deterioration of structural forms of wood in service and present-day methods of protection that have proved commercially successful. The authors have assembled the essential information that has appeared in a wide variety of widely-scattered publications, and, on the basis of their experience and intimate knowledge of the subject, have provided an easily accessible and orderly presentation of the fundamental principles.

**Stephens—The Elementary Theory of Operational Mathematics**

By Eugene Stephens, Washington University. Electrical Engineering Texts. 312 pages, $3.50

The primary purpose of this valuable addition to the literature of applied mathematics is to give the student a working knowledge of a powerful tool for use in practical or research work in science and engineering. The text is a manual of operational procedure which involves: first, the symbolization of the operators of the calculus; second, the algebraization of the symbols, their simplification by means of the laws of algebra; and third, the reinterpretation of the resulting forms as operators, which are then found to be easier to use than the original ones. A large number of problems is included.

**Monk—Light: Principles and Experiments**

By George S. Monk, University of Chicago. 477 pages, $5.00

A text and laboratory manual for the advanced study of geometrical and classical physical optics; and the more recent extensions of physical optics which deal with the origin of spectra, the interaction of light and material media, and the effects on that interaction of external electric and magnetic fields; and the general subject of color and its measurement. A noteworthy feature is the discussion of recent progress in colorimetry.

**Gray—The Advancing Front of Science**

By George W. Gray. Whittlesey House Publication. 364 pages, $3.00

Here are important developments in our knowledge of the skies, of atoms and molecules, of the living matter of cells and tissue-findings which are providing bases for further advances, for reinterpretations, for the new world view of tomorrow. Here is a picture of man embattled against certain unknowns of his Universe. The story is illuminated with such personal touches, biographical details, and laboratory asides as seem of special interest.
