This is why, in so many industries, spectrographic analysis is supplanting slower, and often less accurate, methods . . . and why, also, so many educational institutions are installing B & L Spectrographic Equipment. Students thus trained are better prepared for the methods and tools industry will require them to use.

The B & L Small Littrow Spectrograph (illustrated) is an ideal instrument for educational use. Simple in design, ruggedly constructed, and economically priced. Write for complete details to Bausch & Lomb Optical Co., 642 St. Paul St., Rochester, N. Y.
ATLAS OF CAT ANATOMY
By David B. Horsburgh and James P. Heath
Stanford University

"The Plates are excellent and the entire book very usable."—Bios.

"Anyone who has tried to take a fairly young group of undergraduates through the anatomy of the cat without some such comprehensive atlas as this, knows what a task it is... All this difficulty is obviated for the student, or the instructor, who has this adequately large atlas with its simple, almost schematic illustrations as a guide."—The Biologist.

42 figures on skeletal, muscular, nervous, vascular, digestive, and urogenital systems. 8½ x 11 inches. $1.00.

BOTANIC GARDENS OF THE WORLD
MATERIALS FOR A HISTORY
Second Edition

Statistics concerning the history, organization, and work of more than 550 botanic gardens in 80 countries, from 340 B.C. to 1938 A.D. 256 pages.

Price, $2.50. By mail, $2.75

ECOLOGY

All Forms of Life in Relation to Environment
Established 1920. Quarterly. Official Publication of the Ecological Society of America. Subscription, $5 a year for complete volumes (Jan. to Oct.). Parts of volumes at the single number rate. Back volumes, as available, $6 each. Single numbers, $1.50 post free. Foreign postage: 40 cents.

GENETICS

Research in Heredity and Variation
Established 1916. Bi-monthly. Subscription, $6 a year for complete volumes (Jan. to Dec.). Parts of volumes at the single number rate. Single numbers, $1.25 post free. Back volumes, as available, $7.00 each. Foreign postage: 60 cents.

Orders should be placed with
The Secretary, Brooklyn Botanic Garden
1000 Washington Ave., Brooklyn, N. Y., U. S. A.

ISIS

Review of the History and Philosophy of Science and of the History of Learning and Culture, edited by
GEORGE SARTON, D.Sc.
HARVARD LIBRARY 185, Cambridge, Mass.

Isis may be obtained from any Bookseller at the price of 6 dollars per volume illustrated. Members of the History of Science Society receive each year at least one volume of about 600 pp. free of charge. Annual dues, 5 dollars. Corresponding Secretary, Dr. Henry R. Viets, 8 The Fenway, Boston, Mass.

Isis is the foremost journal on the history of science published in the world to-day. It contains articles, reviews, notes, queries, and elaborate critical bibliographies of the history and philosophy of science. Vols. 28 and 29 will be published in 1938.

Writers of books and papers on the history of science are asked to send a copy as promptly as possible to the Editor of Isis in order that they may be registered in the Critical bibliography. This is the best way of obtaining for their work its certain incorporation into the literature of the subject.

Isis may be examined in any good reference library all over the world.

ST. CATHERINE PRESS, BRUGES, BELGIUM

Life, Heat, and Altitude
THE PHYSIOLOGICAL EFFECTS OF HOT CLIMATES AND GREAT HEIGHTS

By David Bruce Dill

"One of the most attractive and instructive books on any aspect of physiology that we have seen for some time."—The (London) Lancet. "Its appeal to the biologist who is accustomed to the language and the symbols of experimental physiology is assured. The feeling of this reviewer upon reading the volume from cover to cover is that here is physiological literature fresh, reliable, attractive, compound of virtuosity and convincingness."—American Journal of Public Health.

PLAIN PRESERVED AND INJECTED SPECIMENS

BOTANY SPECIMENS AND MOUNTS

MICROSCOPIC SLIDES

PROTOZOAN AND DROSOPHILA CULTURES

LIVE MARINE AQUARIA SETS

During the winter months, the Supply Department ships living marine material, balanced sets of which are listed in our current catalogue. There are also many other living forms which can be easily shipped during the cold weather, which would prove more interesting in the classroom than preserved specimens.

We are very glad to furnish quotations on any of the items listed in our catalogue, or on any other specimens which, due to the slight demand, are not listed in this booklet.

We guarantee all our materials to give absolute satisfaction.

Catalogues gladly furnished on request.

PARAGON SYSTEM

FOR FILING MICRÓ SLIDES

10 Times The Capacity at 1/5 The Cost

Paragon cabinets are especially designed and constructed according to rigid specifications — not merely adapted.

- ENABLES THE FILING OF FRESH SLIDES IN DIRECT CONTACT WITHOUT STICKING.
- NO DRYING OUT REQUIRED.
- CUTS FILING COSTS—SAVES FILING SPACE.
- A CABINET OF UNIQUE DESIGN AND FACILITY. Compact—no waste space. Occupies a minimum desk or floor area and a minimum cubic space.
- ACCOMMODATES 6000 SLIDES PER CUBIC FOOT OF SPACE AT NEW LOW COSTS.
- EVERY SLIDE FILED IN AN “OUTSIDE ROW” ALWAYS AVAILABLE AT FINGER-TIP REACH.
- SLIDES READILY VISIBLE LIKE INDEX CARDS.
- ELIMINATES SCRATCHED COVER SLIPS, LOST OR BROKEN SLIDES AND LOST LABELS.
- SHORT REMOVABLE TRAY-DRAWERS, EASY TO HANDLE AND CARRY AROUND.
- SEVERAL PERSONS MAY WORK AT CONTENTS AT THE SAME TIME WITHOUT INTERFERENCE.
- OTHER EXCLUSIVE FEATURES.
- AVAILABLE IN UNITS FOR 4500 SLIDES AS ILLUSTRATED AND FOR LARGER CAPACITIES.
- INSTALLED IN SEVERAL HUNDRED LEADING INSTITUTIONS.

Nessler Solution
prepared quickly and easily
with
Nessler Salt
A New Compound
Now has more than 450 users
A perfectly balanced, delicately adjusted salt for the rapid preparation of Nessler Solution. Free from Mercurous compounds, it forms a clear stable solution with Sodium hydroxide.
Results in a very clear, stable solution, not affected by carbonates. Produces a perfectly clear solution with Ammonia which remains stable for a long time.
Nessler Salts packaged in 68 gm. bottles. (Enough to make 1 liter Nessler Solution) $2.75 per bottle

Smooth Voltage Control!
of A. C. Loads up to 2000 Watts
VARIABLE VOLTAGE TRANSFORMER

- SMOOTH CONTROL OF VOLTAGE OUTPUT from zero to maximum without interruption of circuit . . . output voltage practically independent of load . . . no drop in output as current load increases.
- WIDE RANGE OF ADJUSTMENT . . . voltage adjustable continuously from zero to full output (113% of line voltage) . . . with low power loss.
- DIAL CALIBRATED IN VOLTS . . . output voltage adjustable by the mere turn of a knob over a dial calibrated in volts.
- COOL OPERATION . . . temperature rise does not exceed 30° C. continuous.
- ADVANCED DESIGN . . . sturdy construction makes for long life.

STOKES WATER STILLS
PRODUCE PURE DISTILLATE
This Stokes No. 171 electrically heated Laboratory Still produces distilled water of the highest quality, perfectly suited to research work, laboratory determinations, for use in sensitive solutions and other purposes. It is easy to install, automatic in operation. Quality of distillate is thoroughly safeguarded by triple vapor baffles, deaerators, Pyrex glass cover and other exclusive features of design and construction. One gal. per hour capacity. One of 22 stock electric, gas or steam-heated models, with capacities from 1/4 to 100 gals. per hour. More than 17,000 in use. Ask your laboratory supply dealer or write direct for complete information.

The Standard for Microscope Glass

Gold Seal Microscope Slides and Cover Glasses

Crystal Clear
Non-Corrosive
Will Not Fog

MADE IN U. S. A.

Microscopic work demands glass of unusual clarity. Gold Seal Slides and Cover Glasses are made from glass practically free from alkali. They attain a precise and uniform thinness of plane surface. Therefore, Gold Seal offers an unusual degree of crystal clarity. Further, Gold Seal is guaranteed against corrosion, fogging or any imperfection. Specify Gold Seal Slides and Cover Glasses.

LABCO LACTOFLAVIN
(NATURAL RIBOFLAVIN)

Now available in various concentrations per gram, as accurately standardized adsorbates, or eluates; also in pure crystals.

“BRIGHTLINE” REPLICA GRATINGS

Produced from matrices made by R. W. WOOD of Johns-Hopkins University

Give ten to fifteen times the intensity in the first order of any replica commercially available.
Grade "A" (15,000 lines) will separate the sodium "D" lines up to eight times the width of the line when used with a lens of 2.75 m focal length.
Grade "A" (5,000 lines) will separate "D" lines under the same conditions to two or three times the line width.
Grade "B" less perfect than grade "A" but still capable of separating the D lines.
All grade "A" replicas mounted on optically polished glass which is flat to one-quarter wave length.

In Selecting Your New Centrifuge, CONSIDER

- Its quality of material and workmanship.
- Actual capacities at higher speeds.
- Motor strength for continuous duty.
- Its adaptability to wide range of accessory equipment.
- The manufacturer's policy in design of new equipment to fit older models.
- Future requirements of your laboratory.

INTERNATIONAL CENTRIFUGES

are furnished in many types and sizes, all of finest material and designed, so far as possible, to allow for future adaptation of improved accessories as developed by new principles of advanced technique.

The International Size 2 Centrifuge is a very popular model due to its large overload capacity, power, protective starting device, flexible speed control and portability. Research Laboratories demand this particular centrifuge because of its wide field of usefulness.

Your Dealer knows International's reputation.

HOW MANY THERMOMETERS DOES AN INCUBATOR NEED?

One thermometer on an incubator does not tell the whole story, unless the construction is such that it gives a true reading. One thermometer quite often will give the temperature at one place only, but tells nothing of conditions elsewhere in the chamber. Neither does it indicate humidity or ventilation... all important factors in precision incubation.

While Castle Precision Incubators have only one thermometer, you can trust its reading because Castle Incubators have a triple wall water jacket which assures accurate incubation with not more than 1° variation throughout a loaded chamber. Chamber is properly ventilated without cold spots.

That's why Castle precision instruments are preferred by those who insist on accurate incubation.

Write for free booklet.

WILMOT CASTLE COMPANY, 1212 UNIVERSITY AVENUE, ROCHESTER, N. Y.
Because of its many diversified applications this new sheet material (Parafilm) has already become a standard necessity in hundreds of educational, clinical, biological, geological, botanical and medical laboratories. Being moistureproof, waterproof, highly flexible (stretches about 200%) and self-adhesive it is ideal for sealing culture tubes, broth flasks and Petri dishes. It is also useful for repairing leaky hose connections and since, when placed between sheets of paper, cloth, leather, cardboard, etc. and heated with a flat iron, it makes a perfect, strong, moistureproof bond, it is unequalled for mounting maps, prints, photographs, drawings, etc. For these and many other purposes it is less expensive, more efficient and easier to use than wet adhesives.

Parafilm is about .005 inch thick; comes in rolls 20 inches wide by 25 feet long in protective fibreboard tubes with directions enclosed.

**HARDENED FILTER PAPERS**

for **HARD USAGE**

WHATMAN Filter Papers Nos. 50, 52 and 54 have been hardened with acid until their wet strength and resistance to alkalis are much greater than ordinary Filter Papers. Because of their hardened surface, these grades shed few fibers into the filtrate, an important consideration in the filtration of intravenous solutions.

Precipitates can be scraped from their hard surface uncontaminated, which makes them invaluable in filtering antitoxins, etc.

They withstand strong suction, hence are used in Buechner Funnels where ordinary Filter Papers would be broken, especially if solutions are at all alkaline.

No. 50 is very retentive, No. 52 medium rapid and retentive and No. 54 very open and rapid filtering.

You may have a place in your work for these grades. Why not send for samples.

H. REEVE ANGEL & CO., INC.
7-11 SPRUCE ST., NEW YORK, N. Y.
FOR RECORDING TIME

or Delivering Rhythmic Stimulation, the requirements are these—

(1) A fixed fundamental rate
(2) Selective fractional periods
(3) Abrupt contact backed by momentum

The Electrical Clock fulfills these requirements by simple means in compact portable form (14.5 x 8 x 4 inches).

No matter how deranged the outside sources of laboratory power, this instrument is independent of the emergency.

Each second, the pendulum in mid-swing creates its own momentary urge through the energizing of a magnet served from two or three dry cells. The armature below the axis approaches indirectly over an arc concentric with the pole-piece: collision is impossible.

The current admitted to the driving circuit is governed by a convenient rheostat with ammeter. The signal circuit carries by relay a separate current of optional character, swiftly made and broken by tripping power derived from the pendulum in full swing. The trigger-like ‘kick’ appears in the record of a magnetic signal as a clean-cut ordinate—not as a rectangular frame.

Used as a master clock, this instrument can serve more than a score of recording magnets. Details of operation will be found in our Catalog of Physiological Apparatus.

Dover, Massachusetts
Four Important New Books in Botany

Haupt’s—AN INTRODUCTION TO BOTANY

By Arthur W. Haupt, University of California at Los Angeles. McGray-Hill Publications in the Botanical Sciences. 388 pages, 6 x 9. $3.00

This comprehensive, well-balanced textbook presents clearly and concisely the fundamental facts and principles concerning the structure, functions, and life relations of plants. Special attention is given to evolution, heredity, adaptation, and other topics of general biological interest having cultural rather than technical value. This approach makes the book particularly suitable for a one-term survey course. Morphology is emphasized throughout the book.

Miller’s—PLANT PHYSIOLOGY. New second edition.

By Edwin C. Miller, Kansas State College. McGray-Hill Publications in the Botanical Sciences. 1139 pages, 6 x 9. $7.50

Designed both as text for advanced students and as a reference book for investigators, this well-known book gives a complete survey of the field of plant physiology, with reference to the green plant. In the new edition practically every chapter has been revised and enlarged to include the investigations and findings that have been made during the past seven years. The book is now strictly up to date, and contains over 6,000 references covering every aspect of the subject.

Maximov’s—PLANT PHYSIOLOGY. New second edition.

By N. A. Maximov, University of Saratov, U.S.S.R. Edited by R. B. Harvey, University of Minnesota, and A. E. Murneek, University of Missouri. McGray-Hill Publications in the Botanical Sciences. 473 pages, 6 x 9. $4.50

The present revision of this standard text is an entirely new book, rearranged and rewritten, with new materials from the data of current research on growth and reproduction, the application of hormones, respiration, photosynthesis, mineral nutrition, etc.

Smith’s—CRYPTOGAMIC BOTANY

Vol. I. Algae and Fungi. 545 pages, 6 x 9. $4.00

Vol. II. Bryophytes and Pteridophytes. 380 pages, 6 x 9. $3.00

This interesting work covers the general classification and special morphology of plants below the level of seed plants. The classification is carried either to the order or to the family and there is a full account of the genus selected as representative of each order or family. There is also a general classification of the distinctive characteristics of the groups considered.

New Books

THEORETICAL MECHANICS
A Vectorial Treatment
By
Carl Jenness Coe

This new text, covering all aspects of modern theoretical mechanics, contains ample material for both the introductory and the more advanced course. Presupposing only one year's work in calculus, it is outstanding for its clarity of exposition and its thorough treatment of fundamentals. Basic principles are expressed in theorems and completely proved. The consistent use of vector analysis throughout the book clears away many of the technical difficulties of the subject and makes possible a more thorough understanding of fundamental ideas than can be given otherwise. Particularly notable is the modern treatment of the Lagrangian and Hamiltonian mechanics without recourse to the difficult details of the calculus of variations. The book is fully equipped with excellent problems and exercise material. To be ready November 29. $6.00

INTRODUCTION TO THE THEORY OF EQUATIONS
By
Louis Weisner

This text, for the one-semester course in the theory of equations provides an unusually fine foundation for more advanced work in algebra. By the use of the concept of a field of numbers as the unifying principle, instead of the more usual theory of substitutions and groups, it presents the subject as a connected body of doctrine in which the various topics are all closely linked together, and gives a clear insight in the nature of algebra as a well integrated subject. Among the topics which are especially well treated are the theory of polynomials with respect to fields, the proof of the fundamental theorem of algebra, and the proof and use of the Lagrange interpolation formula. Many well selected exercises are given throughout the book. $2.25

Macmillan
LaMOTTE
SOIL NITRATE SET
This set was developed in cooperation with Prof. M. F. Morgan of the Connecticut Agricultural Experiment Station, to determine whether or not a soil contains enough nitrate nitrogen for good crop growth. Test is simple and easy to make. Results obtained show parts of nitrate per million parts of soil. Complete with instructions and LaMotte Soil Handbook, $10.00 f.o.b. Baltimore, Md.

THE CENTURY EARTH SCIENCE SERIES
Kirtley F. Mather, Ph.D.
General Editor

MANUAL OF SEDIMENTARY PETROGRAPHY

By
WILLIAM C. KRUMBEIN
Instructor in Geology
University of Chicago

AND
F. J. PETTIJOHN
Assistant Professor of Geology
University of Chicago

This is the only complete treatment of sedimentary petrography written from the analytical point of view. It is more comprehensive than other books dealing with the same subject. Not only are the usual topics of size and mineral analysis treated in complete detail, but such subjects as shape and surface-texture analysis, as well as orientation analysis, are included. Likewise considerable attention is paid to sampling techniques, generally given only brief consideration in works of this type. Finally, it contains the necessary statistical theory and methods, as well as optical theory and methods, needed in the detailed study of sediments.

This is an up-to-date, authoritative, and practical book that in addition to supplying the textbook needs of advanced courses in sedimentary petrography, will be of use as a reference book for research workers in sediments and for oil field laboratory workers, and will be helpful to soil scientists and ceramists.
