Progress in Petroleum: Dr. Gustav Egloff

Obituary:
Wilfred Thomas Dawson: Professor Charles H. Taft, Jr. Recent Deaths

Scientific Events:
A Symposium on Hydrobiology at the University of Wisconsin; The Seventy-first Annual Report of the American Museum of Natural History; The Eighth Summer Conference on Applied Spectroscopy at the Massachusetts Institute of Technology; The Bicentennial Conference of the University of Pennsylvania

Scientific Notes and News

Discussion:

Quotations:
International Cooperation in Science

Societies and Meetings:
The Kansas Academy of Science: Dr. Roger C. Smith. The Iowa Academy of Science: Professor Joseph C. Gilman. The Virginia Academy of Science: Dr. E. C. L. Miller

Reports:
The Report on Biological Abstracts for 1939

Special Articles:
The Synthesis of Glycocyamine in Rat Kidney and a Mechanism of Creatine Synthesis in Vivo: Professor Henry Borsook and Dr. Jacob W. Duboff. Nutrition as a Factor in the Development of Constitutional Barriers to Involvement of the Nervous System by Certain Viruses: Dr. Albert B. Sabin and Carl E. Dufft. Effect of Estrogens and Androgens Alone and in Combination with Chorionic Gonadotropin on the Ovary of the Hypophysectomized Rat: Dr. Richard I. Pencharz

Scientific Apparatus and Laboratory Methods:
Microfilm with the 35-millimeter Candid Camera: Dr. J. David Reed

PROGRESS IN PETROLEUM

By Dr. Gustav Egloff

Research Laboratories of the Universal Oil Products Company, Chicago, Illinois

Crude petroleums range from almost pure gasoline to solid asphalt as produced in the oil fields of the world. They have odors ranging from the rose and musk to a viliness greater than the skunk. Their colors when viewed in transmitted light vary from cherry, amber, yellow and reddish-brown to dense black, and under reflected light some crude are highly fluorescent. Crude oils are composed of paraffin, olefin, naphthenic and aromatic hydrocarbons. Many crude contain sulfur in combination with the hydrocarbons—in amounts from traces to more than six per cent.—while nitrogen and oxygen varies from 0.1 to more than one per cent. Traces of metals such as platinum, gold, silver, uranium, vanadium and titanium have been found in some crude oils. A few Rumanian crude oils are highly radioactive.

Crude oils are literally a wonder source of substances that are the foundation stone of a number of industries with many more to come. Their effect ramifies throughout our social and economic life and they will be a controlling factor in ultimate victory in a world affaire.

A forward-looking group of executives, chemists, physicists, engineers, and a host of other professions have made the oil industry what it is—a $14,000,000,-000 organization in the United States. An amazing amount of research is going on in every branch of the industry at an expenditure of over $100,000,000 a year in order to discover and transport crude oil to refining centers for conversion into products useful to man.

The oil industry is doing everything possible to locate
