Here is being ground a microscope objective lens of 0.6 mm. radius. The accuracy of its surfaces will be measured to a fraction of a wavelength of sodium light. Years of experience have made such accuracy of workmanship a habit to Bausch & Lomb skilled workers.

A typical example of such routine accuracy is the B&L Oil Immersion 97× Objective of 1.25 N.A. in which this minute lens is used. This objective is one widely employed in a variety of microscopical work. Its lenses are burnished into self-centering, threadless cells. This B&L patented objective construction insures retention of original centration after long time service. Such accuracy simplifies and facilitates microscopical work—is the reason why you will want only a B&L Microscope. Bausch & Lomb Optical Co., 642 St. Paul St., Rochester, N. Y.
NESSLER COMPOUND

is carefully compounded and
properly adjusted to produce
a perfect Nessler Solution,
which when added to solu-
tions containing ammonium
produces a perfectly clear
amber solution which will re-
main clear for several hours at
room temperature and for sev-
eral days in the refrigerator.

Packed in bottles containing 68 grams,
sufficient for one liter.

Priced at $2.75 per bottle
Discounts for six or more bottles

LaMotte Chemical Control Service

Covering, pH Control
Boller Feed Water Control
Residual Chlorine Control
and others.

Standard routine tests developed by LaMotte Research De-
partment in cooperation with authorities in these fields.
LaMotte outfits are standardized, accurate, inexpensive and
easy to operate. Write for further information on the sub-
ject in which you are interested.

THE CARE OF A SMALL RAT COLONY

By ROLLAND J. MAIN, Department of Physiology and
Pharmacology, Medical College of Virginia. 181 pages, 12
illustrations. Durably bound. PRICE, postpaid, $2.00.

This book is a report of the experiences handling a rat colony
at the Medical College of Virginia. It is a manual which
could be given a technician totally unfamiliar with rats and
is complete enough to enable him to learn the job by himself.
The coverage is as follows: The Rooms. Equipment. Clean-
Economics. Diseases and Vermin. Notes on the Assay of
Vitamin D. Milk. The Daily Routine.

C. V. Mosby Co., 3525 Pine St., St. Louis

Vacancy: Recent medical graduate with experience in
chemical and physiological manipulations, or Ph.D. in phar-
cacology, bio-chemistry, or physiology may apply for an
instructorship in a large Eastern medical school in the de-
partment of pharmacology and materia medica. Applica-
tions should be addressed to "K.T.," care of Science, 3941
Grand Central Terminal, New York, N. Y.

PYRIDINE CARBOXYLATES AND RELATED COMPOUNDS

The following compounds, prepared in our laboratories as the result of our early and continued interest in nicotinic acid, are available as a service to investigators in this field.

Nicotinic acid
Sodium nicotinate
Ammonium nicotinate
Ethyl nicotinate
Nicotinic acid amide
Nicotinyl monoethyl amide
Nicotinyl diethyl amide
Pyridine betaine carboxylic acid
Trigonelline
Amino-nicotinic acid
Picolinic acid
Iso-nicotinic acid
Quinolinic acid
Ammonium quinolinate
Dimethyl quinolinate
Quinolinic diamide
Quinolinic imide

General Biochemicals also supplies other biologically important factors, including crystalline vitamins, amino acids and vitamin-free casein for biological assays. Further information and prices will be sent gladly upon request.

ACCURATE INCUBATION 
REQUIRES 
PRECISION APPARATUS

May be negated by sloppy incubation that does not hold the temperature at the prescribed levels. That's why so many of the leaders demand Castle triple walled incubators for the greatest safety.

Here's a concrete example that tells why. The American Public Health Ass'n, in its latest standards for milk analysis, recommends 37°C at all levels in the incubator with a tolerance of ±1°C. That is more liberal than the tolerance of Castle Precision Incubators which have always operated with constancy of −½°C and uniformity of −¾°C, under full load conditions.

The reason why you can always depend on Castle is that heat is transmitted by interior radiation rather than by convection, hence there is minimum variation throughout the loaded chamber. 22 gallons of warm water, accurately controlled, provide thousands of calories of reserve heat to quickly restore heat loss occasioned by opening the door. Likewise, temperature inside incubator is unaffected by changes in room temperature, if below operating range.

NEW MULTIPLE CARRIERS

for Blood Precipitation Tubes

This new type Multiple Carrier has been developed especially for centrifuging large numbers of blood specimens for serodiagnostic tests in the International Size 1 and Size 2 Centrifuges.

Cat. No. 380—6 Place Carrier, for 16 mm x 75 mm (5/8" x 3") blood serum tubes, can be used in 2, 4, 8 or 16 place heads.

Cat. No. 381—8 Place Carrier, for 12 mm x 75 mm (⅛" x 3") blood serum tubes, can be used in 2, 4, 8 or 16 place heads.

International Multiple Carriers are made of Dowmetal (Magnesium alloy) for lightness with stainless steel trunnions for strength. Because of the particular design, they are conveniently inserted and easily removed from the centrifuge head, and make unnecessary the use of separate metal shields.

MICROSCOPES

— *stimulate interest*
— *improve grades*

Nothing so stimulates interest in biology as the actual, personal use of a microscope. The experience students gain in manipulating the instrument—focusing and illuminating the object—is invaluable.

Spencer High School Microscopes are manufactured with the same care as medical research instruments. They are "Standard" in hundreds of schools throughout the country.

These instruments range from the simplest type No. 74 without case or objective box at $35.90 to the completely equipped No. 33 MH suitable for use in bacteriology at $155.00.

Write to Dept. F2 for complete details on Spencer High School Microscopes.

Spencer Lens Company
HEART LEVERS AND BREAKAGE

The average laboratory course in Physiology teaches, among other things, the frailty of Heart Levers—devices meant for delicate work and not immune to inexperienced handling.

The wood stylus of this lever is both light and sturdy; and if it be broken, replacement is instant and negligible in cost. For the arm is nothing more than the familiar throat or cotton applicator (widely obtainable in quantity) which glides smoothly through the axle and is therefore not only replaceable, but precisely alterable in length.

A sliding counterpoise, as shown in the figure, is included with each instrument.

Our Catalogue will be sent on request.

BETTER HEALTH FOR AMERICA

By Dr. NATHAN B. VAN ETten

NEW YORK

Better health for America is the objective of the organized medical profession, which I have this year the honor to represent. Organized medicine is devoted to the public service and always has been in America since the first hospital was organized 188 years ago in Philadelphia for medical service to the sick poor. Today 117,000 of the physicians of the United States provide service to people of all social economic levels. These servants of the sick are on call twenty-four hours of every day.

Although the census taker insisted on recording me as working forty hours a week, there have been few days in the last fifty years in which I have not spent more than twelve hours in the service of people who asked for it. Beginning as a general practitioner with surgical training and a generous exposure to medical education, here and abroad—a fortuitous circumstance through the medium of an epidemic of typhoid fever—the demands of other infectious diseases and many calls to obstetric service gradually shaped my course into the field of internal medicine. This very ordinary experience has been shared by thousands of physicians who have been making available this type of public service with considerable satisfaction to the American people.

Organized medicine has been trying for the last ninety-four years to inspire all its members, who represent 85 per cent. of the active practitioners in the United States, with high ideals and with a sense of their responsibility for good public service. It has often been obliged to censor the conduct of members who have been involved in quackery or questionable
