An Important Aid
For Histology Students

STILES
Handbook of
Microscopic Characteristics
of Tissues and Organs

The fundamental histological characteristics of tissues and organs are presented in a manner easily and quickly grasped by the student. The book contains illustrations of epithelial and connective tissues, tabular charts of the formed elements of the blood, histology of the lymphoid organs, histology of the digestive, respiratory, urinary and the male and female reproductive systems. The material is based on Man and the higher vertebrates. A glossary and complete index are included. Students will find it especially valuable in their identification studies.

THE MICROSCOPIC ANATOMY OF VERTEBRATES

By JAMES I. KENDALL, PH.D., D.SC.
Assistant Professor in Biology in the City College, New York City

Octavo, 342 pages, illustrated with 197 engravings. Cloth, $3.75, net.

The first objective of this text is to present a working knowledge of vertebrate microscopic anatomy based on representatives in the various classes. The second objective is to provide a mastery of technique and an important chapter on this topic is included. The book is unique in that it employs material from a variety of vertebrates and is a survey of comparative microscopic anatomy and histology.

St. Louis, Missouri

Microscopists!

Write for free samples of the new Shillaber’s Immersion Oils for Microscopy.

These offer numerous advantages over cedarwood oil. For example, their optical properties are carefully controlled; the oils are chemically inert and will not cake or harden on exposure to air; non-corrosive; more transparent, more stable and more convenient to manipulate than cedarwood oil. Low viscosity and high viscosity grades can be blended as desired.

You can order through your dealer, or write us for free samples and data; or send one dollar for a Combination Packet of one ounce of EACH of the two grades.

What Does Every Chemist Need?

To avoid that feeling of exasperation when he needs to refer to a sample that has been lost or discarded?

He needs the R. P. C. Sample Storage Set!

This unit is only 3¼” wide x 5” high x 11½” long, but holds 100 corked glass vials 4½” x 3” and has indexing facilities for quick reference to 100 samples. Can be kept in the executive’s desk; or twelve Sets storing 1200 samples occupy only a 39” space on the laboratory shelf. Thousands in use.

Each—$3.25 Dozen—$30.00

We pay postage if remittance accompanies order.
Models with larger vials are also available.

File your samples this convenient way for quick reference and when you need to refer to a sample you can find it instantly.

BAUSCH & LOMB SMALL LITTROW SPECTROGRAPH
FOR THE EDUCATIONAL LABORATORY

Simple in design, sturdily built, compact in size and low in price, the B&L Small Littrow Spectrograph is ideally suited for the school's laboratory where moderately high dispersion rather than exceptionally great resolving power is necessary. Here are some of its outstanding features:

1. The wave length range of 2100A to 7000A, dispersed over six inches, affords an easily read spectrum.
2. The entire range is covered in a single spectrogram without adjusting the lens or prism.
3. The optical system is of crystal quartz, the same material used in B&L Large Spectrographs.
4. Four quickly interchangeable, permanently accurate slits of two, five, ten and twenty microns are standard equipment.
5. Uses 2" x 7" plates.
6. Millimeter reference scale, 150 mm. long, may be printed adjacent to spectrum.

For complete details on Bausch & Lomb Spectrographic Equipment, write to Bausch & Lomb Optical Co. 642 St. Paul Street, Rochester, N. Y.

SCIENCE VERSUS LIFE

By Dr. A. J. CARLSON
FRANK P. HIXON PROFESSOR OF PHYSIOLOGY, UNIVERSITY OF CHICAGO

I am grateful for the honor and conscious of the responsibility of speaking to you on this occasion. Many of you are probably disappointed that my theme is not one in which I may claim special experience and competence. But I felt that this is not the time and place to display one's personal wares, the special minutiae of our common endeavor. I have chosen the harder way of thinking aloud, perhaps neither wisely nor well, on a problem of deep concern to all scientists and all other citizens. In so doing it may be that the apparent urgency of the problem obscured the factor of personal incompetence. But I assure you that this eclipse is not total. Should I bore my seniors, seniors in experience, wisdom and years, may I suggest that perchance there is a precipitate, even from folly; and should I exasperate our "young men in a hurry," may I remind them that the general education of the scientist-citizen is incomplete, even at the age of three-score and ten.

When the hurricane strikes ships at sea, frail hulls founder, while the crew of sturdier crafts experience anxiety, if not panic, and are for a time deflected from their course by the temporary violence of wind and waves. But they ultimately make their goal, thanks to human courage, the compass and the fixed stars. Such hurricanes, man made, have struck human society, and its institutions, from time to time throughout recorded history. We call them war. The world is now in the midst of one such period of violence, labeled "the worst"; because human memory is short, and even yesterday's experience is less vivid than that of to-day.

1 Annual lecture under the auspices of Sigma Xi and in cooperation with the American Association for the Advancement of Science, Philadelphia, December 30, 1940.
