BLAKISTON BOOKS ON ANATOMY

CHORDATE ANATOMY
By Herbert V. Neal, Ph.D. (Tufts) and Herbert W. Rand, Ph.D. (Harvard)
Material for a balanced, well organized semester course is presented.
378 Illus. 467 Pages. $3.50 (1939)

COMPARATIVE ANATOMY
By Herbert V. Neal, Ph.D. (Tufts) and Herbert W. Rand, Ph.D. (Harvard)
The facts are given interest and meaning in terms of human phylogenesis.
540 Illus. 739 Pages. $4.75 (1936)

LABORATORY DIRECTIONS FOR COMPARATIVE VERTEBRATE ANATOMY
By I. E. Gray, Ph.D. (Duke Univ.)
It considers principally the shark, Necturus and the cat. Can be used with a minimum of aid from the instructor.
80 Pages. $1.00 (1938)

MORRIS’ HUMAN ANATOMY—9th Ed.
Edited by C. M. Jackson, M.D. (Univ. of Minn.)
A standard textbook written by American teaching anatomists.
1166 Illus. 514 In Colors. 1481 Pages. $10.00 (1933)

MANUAL OF HUMAN DISSECTION
By Edwin M. Shearer, Ph.D. (N. Y. Univ. Medical School)
This dissection guide for the student gives clear and brief descriptions.
79 Illus. 321 Pages. $4.25 (1937)

ANATOMY FOR PHYSICAL EDUCATION
By Linden F. Edwards, Ph.D. (Ohio State Univ.)
A successful text of descriptive and applied human anatomy.
473 Illus. 263 In Colors. 657 Pages. $5.50 (1934)

BUNDY’S ANATOMY AND PHYSIOLOGY—7th Ed.
Revised by S. Dana Weeder, M.D.
A well established text for beginning college courses.
283 Illus. Tables. 490 Pages. $2.75 (1940)

Ready in May—

TEXTBOOK OF HISTOLOGY—5th Ed.
By J. L. Bremer, M.D. (Harvard)
A standard text, widely adopted. Normal functional changes in cells are presented.
458 Illus. 38 In Colors. 580 Pages. $6.50 (1936)

INTRODUCTION AND GUIDE TO HISTOLOGY
By Avery E. Lambert, Ph.D. (State Univ. of Iowa)
A clear treatment of the subject, including comprehensive laboratory directions.
185 Illus. 542 Pages. $5.00 (1938)

MICROSCOPIC CHARACTERISTICS OF TISSUES AND ORGANS
By Karl A. Stiles, Ph.D. (Coe College)
An outline of fundamental characteristics of tissues and organs.
Illustrated. 148 Pages. $1.50 (1940)

EARLY EMBRYOLOGY OF THE CHICK—3rd Ed.
By Bradley M. Patten, Ph.D. (Univ. of Michigan)
A brief and simple presentation of the basic facts of development as they apply to the chick.
87 Illus. 228 Pages. $2.50 (1929)

EMBRYOLOGY OF THE PIG
By Bradley M. Patten, Ph.D. (Univ. of Michigan)
The fundamental facts of mammalian embryology with emphasis on sequence and significance.
166 Illus. 327 Pages. $3.50 (1931)

MAMMALIAN ANATOMY—6th Ed.
By Alvin Davison, Ph.D. Revised by F. A. Stromsten, D.Sc. (State Univ. of Iowa)
Special reference to the anatomy of the cat is presented in this book.
174 Illus. 328 Pages. $3.00 (1937)

BRAIN AND BODY OF FISH
By H. Muir Evans, F.R.C.S. (Univ. College, London)
A study of brain pattern in relation to hunting and feeding in fish.
27 Plates. 164 Pages. $3.50 (1940)

THE BLAKISTON COMPANY, Philadelphia
Fossil Turritellas
From the Pacific Coast Region of North America
by
Charles W. Merriam
Bulletin of the Department of Geological Sciences
Volume 26, No. 1, pp. 1–214, plates 1–41, (collotype),
19 figures in text, 1 map, paper.
$2.50

STRANGE MALADY
The Story of Allergy
by Warren T. Vaughan
In this book one of the most common maladies to which human beings are subject is discussed for laymen by a man who is as distinguished for his literary style as for his eminence as a scientist. It is a book that is as interesting as it is valuable.

"A book as easy to read and understand as a primer, and as interesting as a novel." Science News Letter.

"An informative and fascinating work in nontechnical terms." Nashville Tennessean.

"Few have been the occasions for this reviewer to find in a book written for nontechnical readers such a completely scientific, lucid and charming exposition of a subject." The Saturday Review of Literature.

This is the second nontechnical book published for the American Association for the Advancement of Science by Doubleday, Doran and Company. Price to members of the Association $2.50; to others, $3.00.

BORDERLAND PROBLEMS IN BIOLOGY AND PHYSICS
by John R. Loofbourrow
Part I. Application of Physical Methods to the Investigation of Biological and Biochemical Problems. A comprehensive review of physical methods and physical principles applied to biology and biochemistry, with detailed consideration given to the use of isotopes as tracers in physiological investigations; x-ray studies of biochemical compounds; applications of infra-red, visible, and ultraviolet spectroscopy; applications of the ultracentrifuge; and recent advances in microscopy with particular regard to ultraviolet and electron microscopes.

Part II and Part III in preparation.

Reviews of Modern Physics is available on subscription as follows:

MORE PLANE PARTS PER DAY

Because Westinghouse Developed a Furnace

Normally when steel is heat-treated it undergoes a form of surface deterioration called “decarburization.” Correcting this defect takes time... slows down production.

Westinghouse solved this production problem with a new type of furnace... a furnace with an “Endogas” atmosphere that delivers heat-treated parts with bright, clean surfaces... parts that need a minimum of finishing... in many cases none at all.

This development has made possible the production of more airplane engine parts per day.

The furnace itself requires no expensive accessories... is simple to operate... easy to install. The newly developed “Endogas” atmosphere, which is produced from ordinary city fuel gas, can be used for the treatment of all SAE steels. Proof of results is found in reports like this:—“In one shift we hardened 20,000 small alloy bolts. This would have taken a week in our old furnace, with the added cost and delay of pickling.”

Your production problem may not be that of hardening steel. But remember, Westinghouse maintains a corps of engineers whose entire time is devoted to solving production problems for industry. Their job is to help you. Use their services freely.

ELECTRICAL POWER SPEEDS PRODUCTION

No American manufacturer can afford to overlook the modern methods and equipment offered by the electrical industry for speeding up production. A phone call will bring a Westinghouse representative to your office to discuss your problems.

Future advertisements on this page will describe how Westinghouse is helping in the mining... steel... metal-working... textile...marine...and other industries. Watch for these stories.

Westinghouse
Time-Saver For American Industry
Differential WHITE CELL COUNTS made easier!!

with the

ADAMS MULTIPLE LABORATORY COUNTER...

A-2010 Adams Multiple Laboratory Counter as illustrated is especially practical for blood cell counts—or any other laboratory counting operation. It has six counting units. Five with keys record up to 999. The unit at the extreme right is the totalizer—and records the strokes made on the other five keys. To make recording of percentages easier the totalizing unit rings a bell at 100, 200, 300, etc. This instrument can be operated easily by touch with little practice—in blood counting it removes tediousness—increases speed and greatly reduces the possibility of errors.

Price Each $35.00

Order one now while the matter is before you. This instrument is described on page 20 of our new catalog 102SC—if you haven’t already received one, write for a copy on your department letterhead.

Polaroid* J-Film at New Low Prices

2-inch squares—$1.00 per set

Reduced in price, Polaroid J-Film may now be used more freely than ever before. It is flexible, durable, easily cut into discs for converting microscopes and projectors into polarizing instruments, making glass testing polariscopes, light-control devices, exhibits, etc.

Typical Prices: Polaroid J-Film, 2” x 2”, set of 2 with instruction sheet, in leatherette case, No. 320, $1.00. Carton of 25 sets of 2 for group use, with handbook, No. 321, $20.00. 12” square, No. 328, $12.00 each.

For new, complete catalog write your laboratory supply house or Division 13

POLAROID CORP., 730 Main St., Cambridge, Mass.

ANALYTICAL REAGENTS

Coleman & Bell

Analytical Reagents are manufactured to meet definite standards of purity, including the specifications of the Committee on Analytical Reagents of the American Chemical Society. Our list includes all of the common items and many rare and unusual compounds suitable for special analytical procedures.

Catalog upon request

MANUFACTURING CHEMISTS
NORWOOD, OHIO, U. S. A.
FOR demonstrating photocell principles and photoelectric equipment used in such practical applications as open or closed circuit burglar alarms, fire alarms, illumination control, liquid level control, turbidity control, smoke indication, etc. Through the use of additional equipment, such as magnetic counters, power relays, etc., the demonstrations may be extended to an unlimited number. The set is so simple that an extensive knowledge of electronics is not required for performing the demonstrations.

The set consists of an amplifier-relay control unit, a demonstration panel, a light source with invisible infrared beam filter, and instructions for performing a number of demonstrations. An emissive type photocell of high sensitivity and long life and a type 7E6 amplifying tube with loctal base are provided. The base plate of control unit case is detachable to permit examination of the transformer, relay, condenser, resistors, photocell and amplifier sockets, and potentiometer. An adapter plug with lead wires is furnished for use in place of the photocell on the amplifier-relay control unit for demonstrations of other means of electrical control than that of the photocell. Two single-pole, double-throw knife switches, a buzzer, and a miniature screw base lamp socket with 1½ candlepower lamp are mounted on the demonstration panel. By proper manipulation of the switches, either audible or visual signals can be given in either open or closed circuit demonstrations. The light source will control the amplifier-relay control unit from a distance of approximately 20 feet.

80937 PHOTOELECTRIC DEMONSTRATION SET, Cenco, complete with amplifier, relay control unit, demonstration panel, and infrared light source, for operation from 115 volts, 60 cycles A.C. only, but without magnetic counter, etc. .......................... Each $17.50

Remember that "pet" funnel you liked so well? You probably tried many before you found it. Maybe you still have it, or perhaps you've long been searching for another just as good. Search no longer. Now you can have any number of "pet" funnels without searching for them . . . use Pyrex brand accurate 60° fluted funnels.

They are precision-shaped, pressed to an accurate 60° angle which permits close fitting of filter paper, and the inside flutes double the effective filtering area. All these characteristics make for rapid filtering.

Made of Pyrex brand Chemical Glass—the Balanced Glass—every funnel is mechanically strong, chemically stable and, of course, thermally resistant. All are strong-
er, too, because of beaded edges and heavy wall stems. Furthermore, automatic moulding permits low prices.

Try the accurate 60° Pyrex brand fluted funnel and you'll agree that it is the "pet" of the funnel family. Consult your regular laboratory ware dealer.

"PYREX" is a registered trade-mark and indicates manufacture by

CORNING GLASS WORKS • CORNING, N. Y.
Para-aminobenzoic acid is a B-complex vitamin. It is a natural constituent of yeast, a growth factor for chicks, an essential metabolite for bacteria, and its addition is recommended to all routine culture media. It nullifies the bacteriostatic effect of chemotherapeutic agents of the sulfonamide group, has anti-gray-hair activity in the nutritional and hydroquinone achromotrichia of the rat, is readily acetylated and non-toxic.

The Research Laboratory of the International Vitamin Corp. can supply tablets of purified para-aminobenzoic acid for oral use and the sodium salt for parenteral administration. Write to Research Department for additional information.

*See photographic reproduction of purified product.
**NEW L&N GLASS-ELECTRODE pH INDICATOR—$160**

Sets New Standards of Speed and Convenience

Although simplified and stripped to essentials for low cost and easy operation, L&N's new Glass-Electrode pH Indicator measures within a limit of error of ±0.1 pH. It includes everything necessary for measuring pH, and is also adaptable to titrations.

Speed and convenience are inherent in its simple construction. Adjustments take but a moment, and measurements are made simply by pouring the sample into the beaker and reading pH directly from the meter scale.

Outstanding advantages include:

1. Full accuracy in atmospheres of 95% relative humidity up to 85 F.
3. Instrument is adequately shielded from electrical disturbances.

Titrations are made outside the electrode compartment, with the electrodes furnished.

4. The double range, covering 0-8 and 6-14 pH, provides a convenient overlap of 2 pH...a desirable feature for titrations.
5. The calibrated scale is longer than in any comparable pH indicator.
6. The mahogany case is built to stand up under severe use. Wood and finish are unaffected by high humidity.

7. Batteries are separated from the electrical circuits to avoid corrosion from spent batteries.
8. A whole end of the box swings out, leaving the electrodes and sample holder easily accessible.
9. Glass electrode is adequately shielded against electrical effects.
10. Factory sealed and filled electrodes are highly stable.
11. The sample cup is a standard 50 ml. beaker.
12. Fifteen-inch shielded leads permit electrodes to be used external to the case, for titration as well as pH.
13. Light, well-balanced, and easily portable, the instrument case carries everything necessary for measurements.
14. Only 3 simple preliminary adjustments are necessary. Each is independent of the other.
15. Maintenance is negligible, consisting of adding KCl to the reference electrode salt bridge every 6 or 8 weeks, cleaning the electrodes occasionally, and replacing batteries at infrequent intervals.

Clearly marked, the well arranged top plate reflects the instrument's simplicity and ease of operation.

These instruments are in stock, ready for immediate delivery. The price, including everything necessary for pH measurements, is $160.00.

**7662-A1 GLASS-ELECTRODE pH INDICATOR ASSEMBLY**

Ranges . . . . ,0 to 8 pH, and 6 to 14 pH
Limit of Error, ± 0.1 pH, exclusive of any error in the buffer solution.

Temperature
Compensator, Range, 0 to 50 C
Size . . . . . 16¾" x 8½" x 9⅜"
Weight . . . . . 23 lbs

PROCESSES OF ORGANIC EVOLUTION

By Professor R. Ruggles Gates

UNIVERSITY OF LONDON, KING'S COLLEGE

Omitting the Greek philosophers and the adumbrations of the early naturalists, the first thorough-going theory of evolution may be said to be that of Lamarck. In his time, however, even the elements of physical and chemical science were in a rudimentary state, so that the nature of organic structure and functioning was but little understood. His theory of the direct impress of adaptive modifications on the organism and their transmission by inheritance to future generations failed to convince the world at large of the fact of evolution and has since failed of acceptance by critical students of evolutionary processes. Darwin partly accepted this principle of the inheritance of acquired characters, which was only natural, considering the very sketchy and inadequate knowledge of the nature of reproductive processes in plants and animals in the middle of the nineteenth century, when the "Origin of Species" was written. It may even yet find support in some subtler serological form.

Darwin, however, stressed his principle of natural selection as the main force causing evolutionary adaptation. This theory was derived in turn from an extension of Malthus's law of human populations, and still stands as an almost universally accepted process in the modification and replacement of species. But evolutionists still differ widely in the emphasis they would lay on natural selection in comparison with other evolutionary processes. Darwin relied upon the selection of variations of all kinds occurring in large numbers in the species, but in his time very little was known either of the nature of these variations or the manner of their inheritance. Had Mendel's paper on
