Heritage From Saratoga

Of all they faced that day at Saratoga, Burgoyne's Redcoats remembered longest the withering accuracy of Morgan's Virginia riflemen. So it was at the Cowpens. Later, at New Orleans, the deadliness of Kentucky sharpshooters moved Napoleon himself, to write that it had changed the face of war. And all down the years through the Argonne, America's opponents learned a healthy respect for the armies of a nation of riflemen.

That skill was no accident. The colonists shot for prizes. The pioneers practiced for their lives. Generation after generation, Americans grew up with the rifle. "Shooting at a mark" has been a great foundation of American readiness for defense.

This vitally important hobby flourishes today. On hundreds of ranges across the nation, shooters strive to attain the skill that groups shots in a smaller and smaller circle. At their matches, you'll see a predominant use of Bausch & Lomb products. Ray-Ban Shooting Glasses, the safe, scientific glare protection. Spotting Scopes, with which the shooter dopes wind conditions and "mirage."

And the marksmanship of American naval gunners... the most accurate in the world... is due in no small measure to the excellence of optical gunfire control equipment—range finders, binoculars, aerial height finders—produced by Bausch & Lomb.

**Functional Neuroanatomy**

By

**Wendell J. S. Krieg, Ph.D.**

Assistant Professor of Anatomy

College of Medicine, New York University

This new text presents the study of functional neuroanatomy from the systemic point of view. The sensory and motor neurons are first considered to show the fundamental principles of neural structure and function. The primary neurons of the cranial nerves are logically studied in their natural grouping—by their functional components within the brain stem. The sensory systems which have strong suprasegmental connections are next considered and, following this, the motor pathways. The more complicated connections and associations of the cerebrum are next described, and the cerebellum with its connections to all levels is taken up last of all the parts of the cerebrospinal system. The illustrations are an outstanding feature of this text. They were designed especially by the author to give the student a vivid three-dimensional picture of each system. Phantom illustrations accompany the exposition of each system. There is an atlas of sectional reconstructions of the cord, brain stem and brain which is referred to repeatedly throughout the text, and which is helpful in forming a mental picture of these structures. Laboratory work is carefully planned and correlated with the text matter.

274 Illustrations Plus Section Atlas, 553 Pages, $6.50

**Simplify your pH testing with TAYLOR pH SLIDE COMPARATORS**

Liquid standards have been found to permit more accurate pH determinations—because comparisons are always made with standards of a similar medium. Leading research men prefer Taylor pH Slide Comparators for accuracy and time-saving uniformity and because Taylor Color Standards carry an unlimited guarantee against fading. All Comparators are molded from enduring plastic, they are small, light, easy to use and readily portable.

Write today for new 80-page booklet, "Modern pH and Chlorine Control", or consult your dealer.

A wide assortment of micro slides is described on pages 22 to 26 inclusive of our new catalog, No. 102SC. If you do not already have a copy, please write for one on your letterhead.

CLAY-ADAMS CO INC.

44 EAST 23rd STREET, NEW YORK, N. Y.
REYKJAVIK OFF THE PORT BOW!

Tonight, somewhere at sea, a man stands on the bridge of a freighter with the life line of a nation in his hands.

He is straining his eyes for sight of one of those islands which are our country's first line of defense. To these islands must be transported huge quantities of munitions and food. And the only answer is ships, ships, and more ships.

How is America meeting this tremendous responsibility? You'll get a fair idea at such great factories as the Westinghouse plant where the machinery to drive many of those supply ships is being built, or at the huge Westinghouse-operated Maritime Commission plant which is now being erected alongside it.

The "know how" that works 24 hours a day

There, in these factories, is a dramatic example of how Westinghouse "know how" is doing a job for National Defense.

What is this "know how"? It is the ability to get things done in the best possible way—learned in building products for the general welfare and now used in building materials for the common defense.

The same skill and ingenuity that are building those turbines for the merchant fleet, not long ago built more efficient electric refrigerators and washing machines.

At 17 Westinghouse Divisions, and in the plants of more than 300 sub-contractors, our energies are almost exclusively concentrated on the creation of $400,000,000 worth of defense materials. It's our way of speeding the day when our "know how" will be serving you again—in the home, the farm, and the factory.

Westinghouse

For the Common Defense
Armor-piercing shot               Navy ship turbines and gears
Bomb fuses                        Lighting equipment
Seadrome lighting                 Naval Ordnance
equipment for planes              Airplane generators

For the General Welfare
Street Lighting                    Electric Irons
Electric Refrigerators            Stokers
Motors and Controls

These lists mention only some of the many thousands of Westinghouse products.

Copr. 1942, Westinghouse Electric & Manufacturing Co.
SCIENCE
A weekly journal, established in 1883, devoted to the advancement of the natural and exact sciences, the official organ of the American Association for the Advancement of Science. For forty years SCIENCE has been conducted by its present editor, and is now generally regarded as the professional journal of American men of science.
Annual Subscription $6.00; single copies 15 cents.

THE SCIENTIFIC MONTHLY
An illustrated magazine, devoted to the diffusion of science, publishing articles by leading authorities in all departments of pure and applied science, including the applications of science to education and society.
Annual Subscription $5.00; single copies 50 cents.

THE AMERICAN NATURALIST
A bi-monthly journal established in 1867, devoted to the biological sciences, with special reference to the factors of organic evolution.
Institutional Subscription $5.00; Individual Subscription $3.00; Single Copies $1.00.

SCHOOL AND SOCIETY
A weekly journal covering the field of education in relation to the problems of American democracy. Its objects are the advancement of education as a science and the adjustment of our lower and higher schools to the needs of modern life.
Annual Subscription $5.00; single copies 15 cents.

AMERICAN MEN OF SCIENCE
Sixth Edition
A biographical directory. This book is essential for all workers in science and is an invaluable work of reference for libraries and for all having relations with scientific men. It contains about 28,000 names. Seventh edition in course of preparation.
Price: Twelve Dollars net, postage paid.

LEADERS IN EDUCATION
Second Edition
A biographical directory of leaders in education along the lines of American Men of Science. This directory contains over 17,000 names.
Price: Twelve Dollars net, postage paid.

BIOGRAPHICAL DIRECTORY OF AMERICAN SCHOLARS
In Preparation—Names of approximately ten thousand scholars of the United States will be included who are engaged in research in the fields of the humanities and of the social sciences.
Price in advance of publication $10.00.

The importance of choline in nutrition is now more widely recognized as a result of new investigations showing its relationship to liver cirrhosis and renal damage. Under specific dietary conditions a deficiency of choline results in fatty infiltration of the liver in rats and perosis in chicks. Choline is definitely involved in the metabolism of the sulphur containing amino acids.

It has been suggested that choline is a factor in the B-complex and because of this there is increasing use of choline chloride as a routine supplement in nutritional research especially where highly purified diets are employed.

Choline Chloride synthesized in our laboratories, is available conveniently packaged for research purposes and in bulk quantities.

For the Physiological Laboratory

Pulley with Jointed Arm

The illustration shows one set-up of this convenient device. The plane of rotation is alterable by means of a thumb-screw which fixes the angle of the axis for any desired position. A valuable adjunct to recording from immersed preparations, etc.

RECENT ARCHEOLOGICAL RESEARCH IN LATIN AMERICA

By Dr. WM. DUNCAN STRONG

DEPARTMENT OF ANTHROPOLOGY, COLUMBIA UNIVERSITY; MEMBER, INSTITUTE OF ANDEAN RESEARCH

Highly important anthropological research is in progress in Latin America at the present time. Inaugurated prior to the entry of the United States into the war, this work is an aspect of a long-time program of scientific and cultural cooperation between the American republics. These studies include ethnological and sociological research among various highland and lowland communities, physical studies among modern and ancient populations, and, as would be expected in one of the world's richest archeological areas, much exploration and stratigraphic excavation in the ancient ruins. In all Latin America, archeology, ethnology, history and sociology blend into one closely interrelated and fascinating problem of cultural and racial interaction, an understanding of which is as important to the practical statesman as it is challenging to the social scientist.

During the last year the Institute of Andean Research, working under the auspices of the Office of the Coordinator of Inter-American Affairs, has placed ten parties in this vast field working in close cooperation with the scientists of the various Latin American countries. The present program of the Institute of Andean Research—ranging from northwestern Mexico to Chile—aims at completing and publishing on a
