American War Birds Have Keen Eyes

For America’s fighting forces, strictest requirements are imposed on the men who fly the fighter planes. Stamina, keen perception and split-second timing depend on condition. In the most critical physical examinations, particular emphasis is given to perfection of vision.

Several years ago, at the request of U. S. Army officials, Bausch & Lomb developed a special anti-glare glass for use in bright over-cloud flying. This glass, known as Ray-Ban, has the remarkable property of filtering out excess glare-producing light, at the same time transmitting most of the light useful for seeing. Army, Navy and airline pilots—as well as target shooters and motorists—have welcomed the cool, comfortable, keen vision that Ray-Ban affords.

So, again, and in still another way, Bausch & Lomb gives aid to America’s all-out for Victory. Its other contributions, more obvious, include gunfire control equipment—rangefinders, binoculars, aerial height finders. Behind the scenes, but of no less importance, are the instruments of industrial research and production—metallographic equipment, spectrographs, toolmakers’ microscopes, contour-measuring projectors. Bausch & Lomb eyewear products—eye examination instruments, spectacle lenses and frames—keep a nation of workers at top visual efficiency.

A Successful Textbook

Foley’s College Physics

3rd Edition

Some of Its Characteristics Are:

* Clarity and forcefulness of presentation
* Abundance of well selected original illustrations
* Chapters of approximately equal length making for well balanced assignments
* Thought provoking review questions at the end of each chapter
* Modernized treatment

* Excellent choice of problems, alternately answered
* Repetition of fundamental facts and principles
* Adherence to sound pedagogy
* Emphasis on reasoning rather than on memory
* A complete appendix of tables and constants.

By Arthur L. Foley, Ph.D., Indiana University

470 Illus. 757 Pages $3.75 (1941)

THE BLAKISTON COMPANY, Philadelphia
This new product of Research Laboratories, S.M.A. Corporation, fills a growing need for a specially purified casein hydrolysate, essential for most microbiological assay procedures now in use.

Vitamin Free Casein Hydrolysate SMACO is a 10% solution of acid hydrolyzed, purified casein. When suitably supplemented it will support excellent growth of the organisms employed for microbiological procedures. Each lot is microbiologically standardized for use in assays for thiamin, riboflavin, pyridoxine, pantothenic acid, nicotinic acid (or amide), folic acid, and biotin. Supplied in 10 ml. and 100 ml. vials at the following prices:

- 10 ml. vials, $4.00 per dozen
- 100 ml. vials, $1.50 each, $15.00 per dozen

A summary of current microbiological assay methods is available upon request.

During its many years of glass making, Corning Glass Works has developed more than 25,000 glass formulae. More than 250 different formulae are used in daily production.

Of all these formulae, none is more important to the laboratory than the formula used for Pyrex brand Chemical Glass No. 774. For the development of this glass not only made America independent of foreign sources for heat-resistant laboratory ware, it did far more.

In 1915, for the first time, America had a *Balanced Glass* whose properties—mechanical and thermal strength and chemical resistance—were *scientifically balanced* for maximum laboratory usefulness, and economy through long life. Its balance gives to "Pyrex" Laboratory Glassware the important qualities that make it the all-around glassware for all-around laboratory use.

When you buy laboratory ware, economize! Benefit from *Balance!* Standardize on Pyrex brand Laboratory Glassware. Your regular laboratory supply dealer can furnish any of the thousands of items listed in Catalog LP21.
We think this is what they meant.

154 YEARS AGO, the men who drew up the Constitution of the United States wrote into it this phrase: "To provide for the common defense, to promote the general welfare."

Just what did they intend these words to mean—the men who helped guide the first faltering steps of a new nation?

We believe this is what they meant:
That in times of peace, it was the duty of all individuals and all industries continually to exercise their skill and ingenuity for the benefit of the "general welfare"—so that Americans everywhere could live healthier, happier, better lives.

We think they meant that, should American democracy ever be threatened, the defense of that democracy then became the responsibility of every man and woman in the United States.

Because we at Westinghouse believe this is the meaning of those words from the Constitution, we have lived and worked by them—and are living and working by them today.

Westinghouse contributions to the general welfare and the common defense are many and varied. The products of Westinghouse "know how" range all the way from tiny bulbs for medical instruments to thousand-ton generators for hydroelectric power plants. And now, devoting itself to wartime needs, that same "know how" provides tank and plane equipment, binoculars, bomb fuses, torpedo tubes, battleship turbines, electrical instruments, and weapons of many kinds.

From engineering and science comes our "know how"

What is this Westinghouse "know how"? It is the teamwork and experience of skilled workmen, blended with the knowledge and imagination of engineers. It is the ability to get things done in the best possible way. In war, as in peace, Westinghouse engineering and science are the guiding forces of our "know how."

Already these men have turned over many inventions and improvements to our armed forces. And this work will continue—day and night—until America writes the peace that ends the war.

Westinghouse
For the PHYSIOLOGICAL LABORATORY

1. 8-MM. Mounting Rod. Solid or tubular: the latter is designed both for support and as a convenient conduit for electrical wiring.

2. Right-Angle Rod. A rigid and accurately formed support for universal adjustment of position.

3. Swivel Clamp. The swivel gives complete rotation and has a special hold-fast set screw.

4. Double clamp with Binding-Post. The regular type, but with an added binding screw for quick wiring operations.

ASTRONOMY DURING THE EARLY YEARS OF THE AMERICAN PHILOSOPHICAL SOCIETY

By Dr. S. A. MITCHELL

LEANDER MCCORMICK OBSERVATORY, UNIVERSITY OF VIRGINIA

"It was not without being sensible how very unequal I am to the undertaking that I first consented to comply with the request of several gentlemen for whom I have the highest esteem, and to solicit your attention to a subject which an able hand might indeed render both entertaining and instructive. I mean astronomy." These words are not my own but rather they were spoken by David Rittenhouse in an "oration" delivered on February 24, 1775, before the American Philosophical Society. According to the minutes of the society, the oration was delivered in the college "to a crowded audience, consisting of his Honor the Governor of the Province, the Assembly, and a great number of gentlemen of the first distinction, besides the members of the Society." Moreover, the oration was dedicated "To the delegates of the Thirteen Colonies, assembled in Congress at Philadelphia, to whom the future liberties, and consequently the virtue, improvement in science and happiness in America are intrusted."

Again to quote the words of Rittenhouse:

Astronomy, like the Christian religion, if you will allow me the comparison, has a much greater influence on our knowledge in general, and perhaps on our manners, too,
