Biological Science

Texts that will get results

**Functional Neuroanatomy**

This book presents the study of neuroanatomy from the systemic point of view. Anatomy and physiology are integrated into one account. All described structures are illustrated with original figures by the author. By W. J. S. Krieg, College of Medicine, New York University

**Human Anatomy—10th Edition**

This book presents a complete study of the structure of the human body written by eminent teaching anatomists. This new edition has been thoroughly revised and brought in line with current thought. Edited by J. Parsons Schaeffer, Jefferson Medical College

**Chordate Anatomy**

The authors present in this volume material for a sound morphological course enriched by an interweaving of embryological, histological and physiological material. By H. V. Neal, Tufts College and H. W. Rand, Harvard University

**Introduction and Guide to the Study of Histology**

This book provides the material for a basic course in histology. It is intended to strengthen the foundations for further study in physiology and pathology. Comprehensive directions for laboratory work are included. By A. E. Lambert, State Univ. of Iowa Medical School

**Textbook of Histology—5th Edition**

This widely adopted text presents a study of histology with emphasis on development and the resulting form. Function is discussed as it helps to explain morphology. By J. L. Bremer, Harvard Medical School

**Textbook of Comparative Histology**

Dr. Cole's successful textbook presents a new approach to histology for the undergraduate student. It includes a discussion of both vertebrates and invertebrates. By E. C. Cole, Williams College

**Handbook of Microscopic Characteristics of Tissues and Organs**

This book provides an excellent guide in identification studies. It gives in outline form the main histological characteristics of vertebrate tissues and organs. By Karl A. Stiles, Coe College

THE BLAKISTON COMPANY, Philadelphia
BOTANY . . .
CHROMOSOME NUMBERS IN
THE HYDROPHYLLACEAE
by
MARION S. CAVE
and
LINCOLN CONSTANCE
University of California Publications in Botany
Volume 18, No. 9, pp. 205-216, 3 figures in text.
Paper, 25 cents

THE AMERICAN SPECIES
OF SCUTELLARIA
by
CARL EPLING
University of California Publications in Botany
Volume 29, No. 1, pp. 1-146, plates
1-3, 10 figures in text, 36 maps.
Paper, $1.75

Whether it be for Laboratory Use or Classroom

INTRODUCTION TO PARASITOLOGY.
By A. S. Pearse, Professor of Zoology, Duke University.

This new and concise all-round text gives a well
balanced presentation of all types of animal para-
sites: those of man; domestic animals; fishes; and
insects are presented. Adequately illustrated.

July, 1942 XII, 357 pages 448 figures $3.75

A SOURCE-BOOK OF BIOLOGICAL NAMES AND TERMS.
By Edmund C. Jaeger, Riverside Junior College, Riverside, California.

These 12,000 elements, from which scientific, bi-
ological names and terms are made, give the student,
who wishes to know the literal meaning of the words
he uses, the largest assemblage of such formative
elements or combining forms ever brought together
in a single volume. This key unlocks the meaning
of more than a million technical names and terms.

October, 1942 About 300 pages 96 figures $3.00

PHYSICAL CHEMISTRY FOR STUDENTS OF BIOLOGY AND MEDICINE
(3rd Edition). By David I. Hitchcock,
Associate Professor of Physiology, Yale University
School of Medicine.

3rd Edition XIV, 284 pages 22 figures $3.50

PROTOZOOLOGY. By Richard R. Kudo.
Associate Professor of Zoology, University of Illinois.

2nd Edition XII, 689 pages
291 etchings showing 2711 figures $6.50

ALGAE: THE GRASS OF MANY WATERS.
By L. H. Tiffany, Professor of Botany
and Chairman, Department of Botany, Northwestern
University.

XIII, 164 pages 12 figures and 39 plates $3.50

BLOOD SUBSTITUTES AND BLOOD TRANSFUSION.
Edited by Stuart Mudd, M.D., Professor of Bacteriology, University
of Pennsylvania School of Medicine, and William
Thalhimer, M.D., Director, Human Serum Division,
Public Health Research Institute of the City of New
York, Inc., in collaboration with seventy specialists.

September, 1942 350 pages 94 figures $5.00

Published by CHARLES C THOMAS, Springfield, Illinois—U.S.A.
FOR VITAMIN ASSAY PROCEDURES

More than 200 universities, research institutions, pharmaceutical manufacturers and assay laboratories now use SMACO "Vitamin Test" diets.

If your laboratory is not already using these special products, we invite you to try them on the basis of the added convenience, economy and uniformity.

FOR MICROBIOLOGICAL ASSAY PROCEDURES

"Vitamin Free" Casein Hydrolysate SMACO
10 ml. and 100 ml. vials

FOR BIOLOGICAL ASSAY PROCEDURES

Vitamin A Test Diet U.S.P. XI
1—5 and 25 lb. quantities

Vitamin B-complex Test Diet
1—5 and 25 lb. quantities

Rachitogenic Diet No. 2 U.S.P. XI
1—5 and 25 lb. quantities

Salt Mixture No. 2 U.S.P. XI
1—5 and 25 lb. quantities

"Vitamin Test" Casein
1—5—25 and 100 lbs.

Complete information, prices and quotations on quantities larger than those listed above will be sent on request.

Your order or inquiry will receive our prompt attention.

CHAGRIN FALLS, OHIO
BOOKSIZE SLIDE BOXES

Booksize slide boxes are about 2½" shorter than the usual 100-slide boxes. The exclusive feature which makes possible this compact slide box is the special deep slotted low form, round cornered, hardwood frame into which the slides fit. Hardwood permits deep grooves with closer spacing of the slots. The rounded corners and low form make it easier to remove the slides.

A-1600 Slide Box, Booksize, made of cardboard and wood, holds 100–3 × 1" slides. Size 8½" × 7½" wide × 1½" deep.
Each $1.10 dozen $11.00

A-1601 Slide Box, Booksize, holds 100–3 × 2" (or 3 × 1½") slides. Same details as A-1600, but for 3 × 2" or 3 × 1½" slides. Dimensions are 8½" high × 7½" wide × 2¾" deep.
Each $1.75 dozen $17.50

A-1600/X Slide Box, Booksize, all wood, holds 100–3 × 1" slides. Similar in detail to A-1600 Slide Box, but made of wood throughout. Outside is mahogany stain finish. Dimensions are 8 9/16" high × 7 7/16" wide × 13/8" deep.
Each $1.50 dozen $15.00

A-1609 Slide Box, ½ Booksize, all wood, for 50–3 × 1" slides. Same details as A-1600/X, but has only one column slide slots instead of two. A handy intermediate size box. Size 8 9/16" high × 4" wide × 1¼" deep.
Each $1.10 dozen $11.00

These, and other slide boxes and trays given on pages 27 to 31 of our Catalog No. 1025.
If you haven’t received your copy, please write for one on your letterhead.

Garceau Chronograph

Inertialess Recording System
With Printed Charts
Inkless Writing on Electrically Sensitive Paper
Twenty-five channel model illustrated recommended for recording incidence of alarms, faults in power systems, actual operating periods of welders and machine tools.

ANALYTICAL REAGENTS

Coleman & Bell
Analytical Reagents are manufactured to meet definite standards of purity, including the specifications of the Committee on Analytical Reagents of the American Chemical Society. Our list includes all of the common items and many rare and unusual compounds suitable for special analytical procedures.

Micromax Records Results of Heat-flow Analyzer

Time and effort needed for heat-transfer computations are reduced—usually much reduced—by an electrical computing circuit now in Columbia University's M. E. Department.

Developed by Dr. Victor Paschkis, the equipment consists of resistors and condensers, so arranged that they can create a low-inductance circuit.

In this circuit, current behaves much as heat does in a furnace or building wall, or other object. As it flows, some of it remains to "fill" any condensers in its path, while the rest continues; just as heat "fills" anything in its path through a solid conductor. The analogy is such that the designer can create a "model" of a contemplated heat-transfer equipment simply by substituting electrical quantities for thermal ones. Thus, thermal conductivity is represented by electrical capacity; temperature, by voltage. Btu's become coulombs, and Btu's per hour become amperes. And duration of heat flow, which may be hours or days, can be represented by minutes of current flow. Or, a process which occurs in seconds or fractions, may be stretched, to facilitate analyses.

The net results of the circuit's operation are shown by various instruments, perhaps the most important of which are two Micromax Recorders. These instruments record the voltages which correspond to temperature, just as similar instruments record thermocouple voltages elsewhere.

Applications of the equipment include problems in heating, quenching, and cooling of metals, glass, chemicals, cement, coal, etc.; design of buildings, vessels, refrigerators, and furnaces; applications in the food industries, in prime-mover design, brakes and clutches, and elsewhere. The method is described in Vol. 64, No. 2, Trans. ASME; in May, 1941 Power and in July '42 ASHVE Jrl.
EDMUND BEECHER WILSON

By Professor Thomas Hunt Morgan

California Institute of Technology

EDMUND BEECHER WILSON was born on October 19, 1856, at Geneva, Illinois. The first sixteen years of his life were passed there.

When Wilson was not quite sixteen his uncle Davis suggested that he take over the "little country district school" that his brother Charles had taught the year before. The offer was thirty dollars a month and board (with his aunt and uncle). "When the thermometer stood at thirty degrees below zero, as it did at times, this was, I assure you, no joking matter. I wonder how the modern city-bred youth would like such an experience. I had only twenty-five pupils or so, of all ages from six to eighteen, and I had to teach all grades, from the three R's up to history and algebra."

In the following summer he was in Geneva, where his cousin, Sam Clarke, had just returned from Antioch College. "As the summer passed I had gradually made up my mind to try for a college education and a life devoted to biology or at least to science." "I had nothing but my two hundred dollars and with this in hand I packed up my meager outfit in September and started for Antioch College in Southern Ohio." The college was a very simple one but with sound ideals. "We had good teachers. Here, for the first time I received regular instruction in zoology and botany, in Latin, in geometry and trigonometry..."
