Timely—Significant

JOHNSTONE'S OCCUPATIONAL DISEASES

The vast increase in industrial workers and the greater increase in the number that is to come make this book at once a "must" in the library of everyone concerned with occupational diseases and hazards.

Dr. Johnstone opens with a discussion of compensation. He gives you table after table arranged by states for the entire 48 states, showing minimum and maximum benefits under the Workmen’s Compensation Laws, the limits of payments, the amount of payments based on percentage of wages, permanent disability compensation, and dozens of other facts. Then he takes up a discussion of the diagnosis, prophylaxis and treatment (symptomatic and causal) of the various diseases resulting among workers with Gases, Solvents and Fumes, the Metals and Dusts.

By RUTHERFORD T. JOHNSTONE, M.D., Director of Department of Occupational Diseases, Golden State Hospital, Los Angeles, California. 558 pages, 6" x 9", illustrated. $7.50

RECENT SAUNDERS TEXTBOOKS

Etheredge’s Health Facts
New (4th) Edition!—Due to an extensive revision, this standard text is fully abreast of the times. It is in all reality a full and wholly understandable presentation of modern health facts and their specific applications.

By MAUDE LEE ETHEREDGE, M.D., Dr.P.H., Professor of Hygiene and Medical Adviser for Women, University of Illinois. Foreword by RAY LYMAN WILBUR. 379 pages, 5" x 7½", illustrated. $2.25

Weatherwax’s Plant Biology
New Book.—Immediate endorsement has welcomed this outstanding text. Its scope is such as to fit current teaching standards and its simplified and lucid approach is equally appreciated as an aid to the student in learning.

By PAUL WEATHERWAX, Professor of Botany, Indiana University. 453 pages, 6" x 9½", with 417 illustrations on 182 figures. $3.25

Maximow & Bloom’s Histology
New (4th) Edition!—The living, functioning and human aspects of histology are here given in an unforgettable fashion. A great and valuable feature is the collection of histologic pictures—562 life-like portraits, many in colors.

By ALEXANDER A. MAXIMOW and WILLIAM BLOOM, Professor of Anatomy, University of Chicago. 695 pages, 6¾" x 9¼", with 562 illustrations, some in colors. $7.00

Rice’s Bacteriology
New (3rd) Edition!—Practical essentials only are given by Dr. Rice. This is applied bacteriology—applied to etiology, diagnosis, prognosis, treatment, prophylaxis and sanitary control.

By THURMAN B. RICE, A.M., M.D., Professor of Bacteriology and Public Health, Indiana University School of Medicine, Indianapolis. 500 pages, 6" x 9", illustrated. $5.00

GRAY’S ANATOMY
Thoroughly Revised and Re-edited

By WARREN H. LEWIS, B.S., M.D.
The Wistar Institute of Anatomy and Biology,
Philadelphia, Pennsylvania

Imperial octavo, 1428 pages, illustrated with 1256 engravings, mostly in colors.
Buckram, $12.00, net.

The new edition of this classic work is unique in that the editor has had the assistance of a staff of six distinguished anatomists with wide experience in both teaching and research. The result is a thorough and authoritative revision. In its current edition, Gray’s Anatomy is still the most labor-saving and practical text on the subject, unequalled in arrangement and unexcelled in its accuracy and in the clarity of its concise yet comprehensive presentation.

LEA & FEBIGER
WASHINGTON SQUARE  PHILADELPHIA, PA.

Excerpt from Review
"It should be in the possession of every medical and public health library, every teacher of medicine and public health, every medical unit of the armed forces, and every physician and scientist interested in the field of tropical medicine." — American Journal of Public Health.

Excerpt from Review
"This edition is characterized by the brief, concise and comprehensive way in which it is compiled. It should enjoy prestige to an even greater extent than the previous editions. It is heartily recommended as a text for students and as a reference for both clinicians and laboratory workers." — Archives of Internal Medicine.

THE BLAKISTON COMPANY, Philadelphia

Bacto-Agar

Bacto-Agar is a purified Agar prepared from domestic material. In the manufacture of Bacto-Agar extraneous matter, pigmented portions, and salts are reduced to a minimum, so that the finished product in the form of fine granules will dissolve rapidly, giving clear solutions.

Bacto-Agar is distributed only for use in bacteriological culture media upon proper certification by the purchaser.

Bacto-Asparagine

Bacto-Asparagine is a purified amino acid widely used in synthetic culture media and in the preparation of tuberculin.

Excerpt from Review
"This book presents an authoritative and practical account of tropical diseases, their clinical manifestations, diagnosis and latest methods of treatment. It discusses the zoological aspects and laboratory procedures of importance and gives attention to health problems relating to prevention of infectious diseases.

By E. R. Stitt, Rewritten by Richard P. Strong, Harvard University. 398 Illus. 1826 Pages. Two Volumes $21.00. (1942)

STITT—CLOUGH and CLOUGH

Practical Bacteriology, Haematology and Animal Parasitology. 9th Edition

This book gives a clear, orderly presentation of all available types of laboratory procedure. It includes making culture media, study and identification of bacteria, parasites, insects, poisonous fish and snakes; diagnosis of various diseases: examination of sputum, urine, feces, pus, blood, spinal fluid; preparation of specimens, etc.

By E. R. Stitt. In collaboration with P. W. Clough and M. C. Clough, Johns Hopkins Medical School. 208 Illus. 961 Pages. $7.00. (1936)
CRYSTALLINE BIOTIN and BIOTIN CONCENTRATES

The following solutions of crystalline biotin and biotin concentrates are supplied for research purposes only.

SMACO Solutions Crystalline Biotin suitable for standardization and microbiological assay procedures.

- Crystalline Biotin (free acid)
  1 ml. ampuls—25 micrograms . . $4.00 each

- Crystalline Biotin (methyl ester)
  1 ml. ampuls—25 micrograms . . 3.50 each

SMACO Biotin Concentrates suitable for biological research.

- Biotin Concentrate No. 200
  Standardized to contain 20 micrograms per ml. of solution. Bottles of 50 ml. . . . . . . . . . . $ 5.00 each

- Biotin Concentrate No. 1000
  Standardized to contain 100 micrograms per ml. of solution. Vials of 5 ml. . . . . . . . . . . 3.75 each

- Biotin Concentrate No. 5000
  Standardized to contain 200 micrograms per ml. of solution. Ampuls of 2 ml. . . . . . . . . . . 10.00 each

We will be pleased to send on request an 8 x 10 glossy print of typical biotin deficiency in the rat.

*Your request for the above print, quotations on larger quantities, or your order, will receive our prompt attention.*

KODACHROME SLIDE BOXES

A-1640 SLIDE BOX FOR 2" x 2" KODACHROME SLIDES with 100 individual cardboard partitions to accommodate 100 glass mounted Kodachrome slides or 300 ready-mounts (3 in a partition). Construction is similar to our micro slide boxes. Size 6" x 10" x 2 1/2", dust-proof construction, fabricoid covered. List price, each $2.25, dozen $24.00.

A-1645 SLIDE BOX FOR 2" x 2" KODACHROME SLIDES, similar to the A-1640 Slide Box, but with twelve adjustable red fibre dividers in place of the cardboard partitions. Will hold 350 to 400 ready-mounts or about 150 glass mounted slides. List price, each $2.25, dozen $24.00.

ROSS OPTICAL TISSUE

A proven scientific paper for cleaning optical surfaces.

High quality, strong linen stock. Leaves no lint, and does not become imbedded with dirt particles which scratch the surface.

Approved by government and war agencies, leading aviation, optical, and industrial instrument makers.

While this paper has a crisp, smooth finish, as compared with the soft textured Japanese paper, with which the technician has long been familiar, this American made product has a marked superiority in service.

M7823 Ross Optical Tissue 3" x 5" Package of 100 sheets in pliofilm envelope $ .35 Carton of 10 envelopes 3.50
M7823A Ross Optical Tissue 4 1/2" x 5" Package of 300 sheets 1.00 " 1000 " 3.00
M7823B Ross Optical Tissue 8 1/2" x 14" Package of 100 sheets 1.75 " 1000 " 4.50

New York, N. Y.
They’re in the Navy Now

Somewhere on the high seas, with engines throbbing in the urgency of their mission, grim gray ships press forward in spite of the deadly perils of sea and sky.

On the bridges and look-out stations of such ships, brave men stand alert, searching the horizon—on guard against enemy attack. These are the men whose task it is to fight our sea battles and protect the ships which feed your sons and your brothers, your friends and fellow workers—clothe and arm America’s expeditionary forces—strengthen and aid our allies.

You can help these men, and thus help to hasten the day of Victory, by sending them your binoculars for the duration.

Binoculars are among the many optical instruments of war that Bausch & Lomb is producing and helping others to produce. Today, Bausch & Lomb is working a full twenty-four hours a day, but even with its vastly expanded production program there is not room enough, nor time enough, to turn out all of the binoculars the Navy needs.

That is the problem you can solve—you and all the thousands of other owners of Bausch & Lomb 6 x 30 or 7 x 50 Binoculars. Your binoculars can help save American lives and American ships.

CHEMICAL STRUCTURE OF CYTOPLASM

By Dr. R. R. BENSLEY
DEPARTMENT OF ANATOMY, THE UNIVERSITY OF CHICAGO

In a recent note written as a supplement to a symposium on the structure of protoplasm, K. H. Meyer¹ summarizes Seifriz's view of the structure of protoplasm as follows: "the ultimate structural units of the living substance are probably linear molecules or micellae so arranged as to form a framework" and "the living substance is composed of a true network of primary valence chains which at several points are tied together by chemical bridges held by molecular cohesion (to-day one would say residual valences or hydrogen bonds)." If Meyer had substituted in the first statement the work "some" for "ultimate" and left out the framework which requires further definition, and in the second statement had substituted the word "contains" for "is composed of" this

would be acceptable to the majority of students of cell structure. X-ray diffraction and birefringence studies have brought convincing support to the conception of structural constituents in protoplasm which Seifriz² with so much genius and foresight advanced a decade and a half ago.

This theory, however, interprets only some of the properties of protoplasm. These as listed by Seifriz³ are: "contractility, elasticity, cohesiveness, rigidity, and tensile strength." All these may be possessed by non-living systems. Protoplasm on the contrary requires, excretes, performs complicated chemical operations, uses or liberates energy and reproduces its own substance in kind. This metabolism is mediated by a multitude of intracellular enzymes and carriers and
