Citizen, Patriot—Saboteur

His two sons enlisted the day after Pearl Harbor. He invests 10% of his weekly pay check in War Bonds. His job is a vital link in the production of war material. No man can put more intensity of purpose into his efforts to serve America.

Yet this Soldier of Production unwittingly can commit sabotage against America as serious as that of any bomb-planting secret agent. His eyesight is letting him down—letting America down.

He's always taken for granted the accuracy of his vision. He scarcely realizes that now he does not see sharply at close range.

Modern fighting machines are precision equipment. The product of many hours of finest workmanship can go to the scrap pile as the result of a single faulty visual impression.

Today America needs vision at its best as never before. Bringing vision to its best is the life work of a great corps of men, in your community and every community, who are skilled in the measurement of visual performance, trained and experienced in scientific correction of eyesight deficiencies. Their professional and technical services are invaluable to America today.

How long since you've had your eyes examined?

Texts that will get results

KRIEG
274 Illus.
553 Pages
$6.50 (1942)

Functional Neuroanatomy
This book presents the study of neuroanatomy from the systemic point of view. Anatomy and physiology are integrated into one account. All described structures are illustrated with original figures by the author. By W. J. S. Krieg, College of Medicine, New York University

MORRIS
1155 Illus.
1835 Pages
$12.00 (1942)

Human Anatomy—10th Edition
This is a complete study of the structure of the human body written by eminent teaching anatomists. This new edition has been thoroughly revised and brought in line with current thought. Edited by J. Parsons Schaeffer, Jefferson Medical College

NEAL and RAND
378 Illus.
467 Pages
$3.50 (1939)

Chordate Anatomy
The authors present in this volume material for a sound morphological course enriched by an interweaving of embryological, histological and physiological material. By H. V. Neal, Tufts College and H. W. Rand, Harvard University

LAMBERT
185 Illus.
642 Pages
$5.00 (1938)

Introduction and Guide to the Study of Histology
This book provides the material for a basic course in histology. It is intended to strengthen the foundations for further study in physiology and pathology. Comprehensive directions for laboratory work are included. By A. E. Lambert, State Univ. of Iowa Medical School

BREMER
455 Illus.
580 Pages
$6.50 (1936)

Textbook of Histology—5th Edition
This widely adopted text presents a study of histology with emphasis on development and the resulting form. Function is discussed as it helps to explain morphology. By J. L. Bremer, Harvard Medical School

COLIN
47 Illus.
386 Pages
$3.00 (1941)

Elements of Genetics
This text presents material for an introductory course in the elements of genetics with emphasis on the applications to man. The economic importance of genetics to plant and animal breeding, the contribution of genetics to human biology, and genetics as an aid to the understanding of evolution, are discussed. By E. C. Colin, Chicago Teachers College

MARSHALL
244 Pages
$1.75 (1941)

Laboratory Guide in Elementary Bacteriology
Designed for use in a one-semester course, this manual presents 92 experiments grouped as follows: Introductory Technique; Morphology; Physiology of Bacteria; Applied Bacteriology; Serology and Infection. By M. S. Marshall, Univ. of California

THE BLAKISTON COMPANY, Philadelphia
Special Products...

FOR VITAMIN ASSAY PROCEDURES

More than 200 universities, research institutions, pharmaceutical manufacturers and assay laboratories now use SMACO "Vitamin Test" diets.

If your laboratory is not already using these special products, we invite you to try them on the basis of the added convenience, economy and uniformity.

FOR MICROBIOLOGICAL ASSAY PROCEDURES

"Vitamin Free" Casein Hydrolysate SMACO
10 ml. and 100 ml. vials

FOR BIOLOGICAL ASSAY PROCEDURES

Vitamin A Test Diet U.S.P. XI
1—5 and 25 lb. quantities

Vitamin B-complex Test Diet
1—5 and 25 lb. quantities

Rachitogenic Diet No. 2 U.S.P. XI
1—5 and 25 lb. quantities

Salt Mixture No. 2 U.S.P. XI
1—5 and 25 lb. quantities

"Vitamin Test" Casein
1—5—25 and 100 lbs.

Complete information, prices and quotations on quantities larger than those listed above will be sent on request.

Your order or inquiry will receive our prompt attention.

CHAGRIN FALLS, OHIO
The AMINO ACIDS

are recognized to be of fundamental nutritional importance, and many investigators are engaged in developing knowledge regarding their physiological significance. Almost all of the amino acids found in proteins are now being manufactured in pure form by Merck & Co. Inc.

Aminoacetic Acid
(Glycocoll, Glycine)

I(+)Arginine Monohydrochloride
dl Aspartic Acid
Beta-Alanine
dl Alpha-Alanine

l(+)Cysteine Hydrochloride
I(+)Cystine

I(+)Glutamic Acid
dl Glutamic Acid Monohydrate

I(+)Histidine Monohydrochloride

I(-)Hydroxyproline
dl Isoleucine
dl Leucine
I(+)-Leucine

I(+)Lysine Monohydrochloride
dl Lysine Monohydrochloride
dl Methionine
dl Norleucine
dl Phenylalanine

I(-)Proline
dl Serine
dl Threonine
I(-)Tryptophane
I(-)Tyrosine
dl Valine

Choline

Choline is recognized as an important nutritional factor, and for this reason is required as a routine supplement in nutritional experiments, especially when highly purified diets are employed.

THE TERPHENYLS

can these new, high molecular weight, aromatic hydrocarbons help YOU?

The Terphenyls have only recently been made available commercially. They are offered as a mixture and as relatively pure individual isomers ... at prices which may make it well worth your while to investigate their possible usefulness in your products or processes.

As high molecular weight aromatic hydrocarbons they open up new opportunities for chemical synthesis in the fields of dyes, drugs and organic chemicals. They may be halogenated, sulfonated or nitrated, and the sulfonates may be hydroxylated in the manner usual for aromatic radicals. Aliphatic radicals may be added by Friedel-Crafts reaction.

For experimental samples and further technical data, mail the coupon below.

Monsanto Chemical Company, Phosphate Division, St. Louis, Missouri.

Monsanto Chemical Company, 1714 S. 2nd Street, St. Louis, Mo.
Please send me literature and experimental samples of
☐ mixed, isomeric terphenyls
☐ ortho terphenyl ☐ meta terphenyl ☐ para terphenyl.

KODACHROME SLIDE BOXES

A-1640 SLIDE BOX FOR 2" x 2" KODACHROME SLIDES with 100 individual cardboard partitions to accommodate 100 glass mounted Kodachrome slides or 300 ready-mounts (3 in a partition). Construction is similar to our micro slide boxes. Size 6” x 10” x 2½”, dust-proof construction, fabricoid covered. List price, each $2.25, dozen $24.00.

A-1645 SLIDE BOX FOR 2” x 2” KODACHROME SLIDES, similar to the A-1640 Slide Box, but with twelve adjustable red fibre dividers in place of the cardboard partitions. Will hold 350 to 400 ready-mounts or about 150 glass mounted slides. List price, each $2.25, dozen $24.00.

5000 R.P.M. on D. C.-ADAMS ANGLE CENTRIFUGES

with underguard No. CT-1055
with six 15 ml. tubes loaded.
4200 R.P.M. on A.C. with same load.

These centrifuges offer important advantages over the conventional units. They utilize the new angle principle—the tubes being suspended at a fixed 52° angle—thus, faster sedimentation is achieved by the shorter distance particles are required to travel... creating mass, and reaching the bottom more quickly. When at rest, the tubes remain in the angular position and no stirring up of sediment results.

CT-1000 ADAMS SENIOR SAFETY-HEAD CENTRIFUGE for SIX 15 ml. TUBES, complete with six round bottom brass shields with rubber cushions and three each graduated and ungraduated taper bottom 15 ml. glass tubes. Without Underguard .......... Each $15.50

CT-1055 UNDERGUARD for Safety-Head, made of steel. Each $ 3.50

CT-1050 PROTECTIVE CAP, snaps into top to enclose test tubes, at high speeds a necessary precaution against flying glass ................. Each $ 2.50

Also for MICRO and SEMIMICRO WORK

The above Centrifuges will accommodate six 15 ml. round bottom or taper bottom test tubes. Micro and semimicro tubes (5 ml. to 0.5 ml.) can be accommodated by purchasing extra shields, prices from 50c to 75c each. No adapters are required.

Other ADAMS CENTRIFUGES and laboratory supplies are described in our Catalog No. 102SC. If you do not already have a copy write for one on your letterhead please.

Above Centrifuges have universal motors for 110-volt A.C. or D.C. current. They can also be supplied to operate on 220-volt A.C. or D.C. current. Additional charge of $2.00 is made for 220-volt motors.
More bombs for Berlin . . . more terror for Tokio

IN TOTAL WARFARE, every pound of metal we can save means just so much added destruction we can hurl at the enemy.

7000 tons of steel saved means approximately 70,000 more heavy bombs to drop on Berlin and Tokio.

2500 tons of copper saved means nearly 1,000,000 additional 3 in. A. A. cartridge cases for blasting Zeros and Messerschmitts out of the sky.

Westinghouse will save these huge amounts of steel and copper during 1942 in its Transformer Plant alone . . . because of radical improvements in transformer materials and design that have come out of the Westinghouse Research Laboratories and Westinghouse engineering:

An entirely new kind of transformer steel wherein the crystals line up like tenpins in a row, instead of in helter-skelter fashion as in ordinary silicon steel. This new grain-oriented steel . . . called Hipersil . . . is the result of nine years of intensive study and experiment by Westinghouse Research Engineers.

Hipersil has one third more flux-carrying capacity than the best grade of ordinary silicon steel. Because of its higher permeability, less Hipersil core material is needed. Transformer weight may be reduced 25 to 30 per cent. Hipersil, alone, will save thousands of tons of critical steel and copper in the vast number of transformers Westinghouse will make during 1942.

Forced oil-cooled transformers in which the cooling medium is rapidly circulated inside the transformer shell. This means quicker heat removal. Smaller cores and coils can do a bigger job. Strategic steel and copper are saved to help win the war.

Copper temperature control. Here a liquid-cooled transformer carries a load up to the point where the copper reaches a critical temperature, beyond which the insulation may be damaged. By the use of this thermal control, higher safe loads can be carried. A transformer of a given size, therefore, does more work . . . another way of saving steel and copper for more shells and tanks and ships to hurl at the Axis.

Westinghouse makes transformers in a wide variety of sizes . . . from tiny units for use in portable “walkie-talkie” radio sets, to high-power transformers as big as a six-room house. These latter transformers weigh 257 tons. As a further example of the economy in strategic materials effected by Hipersil, 40 tons of steel and 4 tons of copper are saved through the use of this new magnetic material in the construction of such a transformer.

Better transformers go hand in hand with these major achievements of Westinghouse and “know how” in saving strategic materials for our all-out drive to victory.

THE ORGANIZATION OF BIOLOGY AND AGRICULTURE

By Dr. ROBERT F. GRIGGS

CHAIRMAN, DIVISION OF BIOLOGY AND AGRICULTURE, THE NATIONAL RESEARCH COUNCIL

Over and over again as I endeavor to facilitate the contributions of biology and agriculture toward winning the war, I encounter the unorganized and incoherent condition of our group of sciences. I have come to believe that this lack of organization, and the lack of unified objectives that goes with it, is of itself partly responsible for the comparatively ineffective application of biology and agriculture to the needs of a total war.

To assist in clarifying our functions and our responsibilities, I have constructed an organization chart (Fig. 1). In its conception the chart is entirely abstract. Its contact with the present situation comes through the numbered references in the appropriate boxes to the national technical societies in whose hands to a large extent lies the professional guidance of those arts and sciences by which man produces his food and the organic raw materials which he uses in his civilization.

To point out that the products of the soil constitute the most fundamental and the only really essential factors in man's existence is to state a truism to which there is no occasion to call your attention. The chart is presented, rather, to emphasize the complexity of the problem of organization which is faced by biology, using that term in its widest sense including its applications.

The outstanding feature of biology and agriculture, and it must immediately occur upon any consideration of these fields, is the number and diversity of the organizations included in the group. Whereas chemists of all sorts support one strong chemical society,
