BOGERT’S NUTRITION AND PHYSICAL FITNESS
New (4th) Edition—Just Ready!—In this new edition, Dr. Bogert meets completely the requirements of modern courses in nutrition. Much material has been deleted and replaced with pertinent new facts or more comprehensive discussions of subjects especially vital in today’s courses. The new and expanded information on Vitamins and Minerals is especially noteworthy, six chapters now being devoted to those subjects. Organization and unification have been improved throughout the text and all material brought up-to-date.

By L. Jean Bogert, Ph.D., formerly Instructor in Medicine, University of Chicago. 652 pages, 6¼ x 9¾”, illustrated.

HEISIG’S SEMIMICRO QUALITATIVE ANALYSIS
New Text—Just Ready!—Dr. Heisig fully meets the objectives of an elementary course in theory and practice of qualitative analysis and gives the student a clear grasp of the properties and reactions of the twenty-four common metals and the anions of the twenty-four common acids. The material is presented in the light of the theory of ionization, the law of mass action, and the concepts of Debye, Brönsted and Werner.

Experimental work is given in concise form, bringing out laws and theories so that the student understands and correctly interprets his observations and results.

By G. B. Heisig, Ph.D., Associate Professor of Inorganic Chemistry, University of Minnesota, Minneapolis. 331 pages, 6¼ x 9¾”, illustrated. $2.50

HARROW’S TEXTBOOK OF BIOCHEMISTRY
New (3rd) Edition!—The publication of this new edition has resulted in a very marked increase in number of adoptions. It is indeed a text that every teacher of this subject must carefully consider because already student response has definitely indicated its unusual teaching qualities. Dr. Harrow sets forth fundamentals with such clarity that principles are firmly fixed in the student’s mind. Well-chosen applications bring home unforgettable the significance of theory.

By Benjamin Harrow, Ph.D., Professor of Chemistry, City College; College of the City of New York. 637 pages, 6¾ x 9”, illustrated. $4.00

RANSON’S ANATOMY OF THE NERVOUS SYSTEM
New (7th) Edition!—The great clarity of this text continues to mark it as the work of a great teacher.

In making this revision, Dr. Ranson incorporated the suggestions of prominent teachers in addition to bringing the material generally up-to-date. More attention has been given to physiology and several helpful changes made in arrangement. As usual, the illustrative excellence of the text has been fully maintained.

By Stephen W. Ranson, M.D., formerly Professor of Neurology and Director of the Neurological Institute, Northwestern University Medical School, Chicago. 820 pages, 6¼ x 9¾”, with 408 illustrations, some in colors. $6.50

New!
Organic Chemistry

from Review in Science by Professor Bogert:

"... A well balanced presentation of the subject in its manifold and diversified aspects, theoretical and practical; including the purely descriptive side of preparation, properties and applications; the theoretical considerations underlying the behavior of certain molecules, and the immensely important role of organic chemistry in the maintenance and progress of our present civilization and industries. ..."

"... The introductory chapter discusses the nature of atoms and of atomic linkages, including types and strength of bonds, bond angles, rotation about bonds, distances between atoms and anomalous valences; molecules, dipole moments, resonance, hydrogen bridges; the mechanism of organic reactions, and the primary divisions of organic compounds into Aliphatic, Aromatic and Heterocyclic. ..."

"... Succeeding chapters discuss the various groups of organic compounds in the usual order—hydrocarbons, alcohols and ethers, halogen derivatives, aldehydes, ketones, etc. ..."

"A helpful feature is the explanation of the generally accepted I.U.C. system of nomenclature."

"The book is liberally illustrated with structural formulas, and provided with tabular summaries of important series and their properties, and test questions."

"... Well classified and arranged, lucidly and logically presented, the book should prove a very useful and interesting first year college text and foundation for more advanced and more highly specialized courses."

By G. Albert Hill, Wesleyan University; and Louise Kelley, Goucher College. 919 Pages $4.00 (1943)

Recent investigations have shown that the joint administration of choline and cystine or of methionine alone will prevent a specific dietary hepatic injury in rats.\(^1\)

Methionine administered shortly before chloroform anesthesia completely protects dogs against liver damage. Methionine (or cystine plus choline) affords significant protection against liver damage, even when administered three or four hours after chloroform anesthesia.\(^2\)

Earlier studies demonstrated a definite relationship of choline to liver cirrhosis,\(^3\),\(^4\),\(^5\) and renal damage.\(^6\) Under special dietary conditions a deficiency of choline results in fatty infiltration of the liver in rats\(^7\) and perosis in chicks.\(^8\) Choline is definitely involved in the metabolism of the sulphur containing amino acids.\(^9\),\(^10\)

It has been suggested that choline is a vitamin of the B-complex.\(^11\),\(^12\) Because of this there is increasing use of choline chloride as a routine supplement in nutritional research, especially where highly purified diets are employed.

Precise Specific Gravity Determinations

For the determination of specific gravity, surface tension by ring and drop method, calibration of springs, Hooke's Law Experiments, mass determination by the longitudinal vibration method, moment of inertia tests by the torsional vibration method and magnetic distribution investigations.

This balance has a heat-treated spring elongation of which is a straight line function of the load applied. It incorporates the vernier attachment permitting elongations to be read to within 1/10 of a mm. The zero point index consists of a short, flat rod, with two cross arms to limit the range of action of the weight pan. It prevents weights and objects falling from pan when the balance is being brought to equilibrium. Around this rod there is a glass tube with an etched zero-point reference line.

The elevating mechanism consists of a microscope type of knurled thumb wheel activating the movable elevating column. This insures a very steady, uniform motion without causing undue oscillation of the spring. Platform and index arm are adjustable. Columns are polished and chromium plated.

One spring stretches 450 mm., under a load of 9 grams; sensitive to about 2 mg. The heavier spring stretches about 450 mm., under a load of 80 grams and is sensitive to about 10 mg. Movable column is 500 mm. long, graduated in 1 mm. divisions. An aluminum pan and a glass pan with platinum suspensions are included.

Molecular Keys
To A New World

VAST NEW SOURCES of raw materials ... the equivalent of those which might be found in a great new continent ... opened to America when CARBIDE AND CARBON CHEMICALS CORPORATION, a Unit of UCC, started building synthetic chemicals from water, salt, air, and hydrocarbons.

These chemicals are usually water-white liquids, although some are gases or solids. Basically, they are compounds of carbon and hydrogen, or with chlorine, to build up an endless series of chemicals. The models of these molecules of chemicals shown here are many millions of times actual size.

These chemicals are the raw materials for fabulous plastics ... amazing textile fibers ... life-saving drugs ... vitamins by the carload ... synthetic rubber ... more things and better things than were possible before their existence.

Since these chemical wonders are obtained from abundant domestic sources, their use has contributed materially to the nation's self-sufficiency. Through research, American ingenuity, and patient development, scarce natural products have been duplicated or improved upon. Great new industries and great new materials that contribute to the nation's strength have come into being. And America has become a leader in a field as native as its own soil.

Broadly speaking, the uses of many of the synthetic organic chemicals developed by CARBIDE AND CARBON CHEMICALS CORPORATION are just beginning. The already established uses are indicative of their vast future values to mankind.

ETHYL ACETOACETATE for life-saving drugs, vitamins
ETHYLENE GLYCOL for dynamic, anti-freeze, aircraft engine coolant
ETHYL ALCOHOL for temperate, pharmaceutical, tobacco powder
ETHYLENE DICHLORIDE for vitamins, and synthetic textile fibers

BETTER MEDICINES! Amazing medicines like the sulfa drugs, synthetic vitamins, insect repellents, and anti-malarial drugs depend upon synthetic organic chemistry.

COLD PROOF! Coolant for liquid-cooled aircraft engines and base for anti-freeze in military cars and trucks is ethylene glycol, an important synthetic chemical.

MAN-MADE! All types of synthetic rubber require synthetic organic chemicals for their manufacture. Here's hope for tires for you in the future.

MAGIC PLASTICS! Wonderful plastics that look like glass, stretch like rubber, and which are proof against water, sunlight, oils, and many chemicals are made from vinyl-like synthetic resins.
He's Making a Photomicrographic History of the War

The photomicrographer in his laboratory, whether in an industrial plant, in some distant United Nations base of operations or in a great research institution... whether his work is dedicated to war production or to the fight against disease... is today documenting each forward step that science takes.

Vital in war production and an essential heritage to those who will live in the days of peace to come, photomicrography preserves important findings that could otherwise so easily be lost. Photomicrography makes wartime experience in metallography, surgery, prophylaxis, chemistry... in all fields... available for peacetime applications.

Here is another field in which Bausch & Lomb instruments, developed in the interests of peacetime scientific and industrial research, go to war. Here is still further proof that this is a war of precision, where the optical instruments that insure accuracy in expanded production take an important place beside those other B&L Instruments used as fighting tools by our fighting men.

For Bausch & Lomb Instruments essential to Victory—priorities govern delivery schedules.

THE MOBILIZATION OF SCIENCE

In the Senate of the United States on February 11, Mr. Kilgore introduced the following bill (S. 702), which was read twice and referred to the Committee on Military Affairs:

To mobilize the scientific and technical resources of the Nation, to establish an Office of Scientific and Technical Mobilization, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

DECLARATION OF POLICY

SECTION 1. The Congress hereby recognizes that the full development and application of the Nation's scientific and technical resources are necessary for the effective prosecution of the war and for peacetime progress and prosperity, and that serious impediments thereto consist in—
the unassembled and uncoordinated state of information concerning existing scientific and technical resources;
the lack of an adequate appraisal, and the unplanned and improvident training, development, and use, of scientific and technical personnel, resources, and facilities in relation to the national need;
the consequent delay and ineffectiveness in meeting the urgent scientific and technical problems of the national defense and essential civilian needs;
the trend toward monopolized control of scientific and technical data and other resources with lack of access thereto in the public interest; and
the absence of an effective Federal organization to promote and coordinate, in the national interest, scientific and technical developments.

The purposes of this Act accordingly are—
(1) to appraise the current use of scientific and technical knowledge, facilities, and personnel, and to develop comprehensive national programs for the maximum use of science and technology in the national interest in periods of peace and war;
(2) to mobilize for the prosecution of the war all scientific and technical facilities and personnel;
(3) to facilitate after the war the transition of the national economy from the tasks of war to peacetime enterprise;
