Paul also maintains, with many other scholars, that the power of original creation in language is by no means lost, but is as active to-day as ever; and he gives many examples of words of recent origin which he holds to be undervived from any others. All original creations, both earlier and later, he believes to be imitative, so that on this point he is directly at issue with many other philosophers. These are the fundamental causes of the development of language; but to these must be added analogy, which has a powerful influence by multiplying forms and usages that have arisen in some other way.

Having thus traced the outline of his subject, Professor Paul pursues it into all its ramifications through a series of chapters, which we have not space to analyze here, but which all seem to proceed from every student of philology. In these days, when there is so much superficial writing, it is pleasant to meet with a book at once so thoughtful and so scholarly as this by Professor Paul; and, though there are things in it that are sure to provoke criticism, it will be of great value to all students of the history of language.

This work is another of its author's studies in occultism. The leading character in the story, called sometimes Seraphita and sometimes Seraphitus, is intended as an example of the "twin soul" which we are told every one must have in order to attain to supreme felicity. Hence she is represented as acting in some cases like a woman, and in others as a man, though the reader may think that she doesn't act much like either. To make the bisexual quality still more prominent, this "strange being" is represented in Aero-femine character as inspiring love in a young man, and in his masculine character as awakening the same sentiment in a young woman. She talks grandiloquent nonsense about heaven, hell, prayer, and other themes of that sort, and at last is "translated" to the spiritual world; and so the story comes to an end. As far as the story itself, it has very few incidents, and no interest at all except what attaches to its occult "philosophy," if any one can take an interest in that. For our part, we find it repulsive, like every thing else of the same sort; being neither philosophy nor religion, but a mere mass of fiction put forward as truth. Besides the principal story, the book contains two shorter ones of a similar character, which call for no special remark. There is also a long and wordy introduction by G. F. Parsons, which neither adds to nor elucidates the text, and has, so far as we can see, no reason to be.

This book, which is intended primarily for students of French, consists of a large number of extracts giving an account of the new society in France, and of the progress made in France and other countries during the last century. Every one knows that society and conversation have long been more important elements in French life than in that of other nations, and have had greater influence on French literature than on any other. Students of literature and of social life are therefore alike interested in tracing the origin and growth of that society for which France has long been noted, and Professor Crane here offers them help in so doing. He has restricted himself to a portion only of seventeenth-century society, neglecting that of the court entirely, while even some elements of literary society are passed over. The extracts given are successively of the Hôtel de Rambouillet and the persons who frequented it, of Mademoiselle de Scudéry and her rather pedantic companions, of the affected set who were nicknamed the Precieuses, and of the rules of politeness that prevailed in that age. As far as they go, they give a pretty clear view of the society of which they treat, of its follies and foibles, as well as its pretensions, and so shed some light on the growth of literature and the development of literary style. Some passages are almost repulsive from the self-admiration and mutual admiration they exhibit; but these were necessary to give a faithful picture of the times. Professor Crane's introduction gives useful information respecting the leading persons and topics dealt with, and other points of a more special character are treated in the notes. The book is convenient in form, and well printed.

AMONG THE PUBLISHERS.

The July Atlantic opens with an article by Miss Preston, giving an account of the last days of Cicero, one of a series which she has been contributing to the Atlantic. Professor N. S. Shaler, who is a person to speak with authority, writes about "The Problem of Discipline in Higher Education," which will be read by student and teacher with equal interest. Mr. H. L. Nelson has an article on the "Speaker's Power," not a consideration of the power of oratory, but the power of the Speaker of the House of Representatives. Mr. W. H. Downes has an interesting paper on the "Old Masters" which may be seen in New York, and it is surprising to find how large a representation can be seen there. Another article is "Books that have Hindered Me," by Agnes Repplier. So much has been written about books that have helped various people, that Miss Repplier has decided to write about the books that did not help her. Among these she mentions "Sandford and Merton," Milton's "Aeropagitica," and the "Heir of Redclyffe." The number closes with a knowing article on "Trotting Races," by H. C. Merwin.

—A. D. F. Randolph & Co. will publish at once the Duke of Argyll's work entitled "What is Truth?"—

—J. S. Ogilvie has just ready, in his Fireside Series, "The History of the Great Flood at Johnstown, Penn."

—D. Appleton & Co. will publish immediately "Days Out of Doors," by Charles C. Abbott, author of "A Naturalist's Rambles;" "Experiments of Discipline in Higher Education," which will be read by student and teacher with equal interest. Mr. H. H. Johnston; and an interesting work on "Stellar Evolution and its Relations to Geological Time," by James Croll.

THE FORUM FOR JULY.

In the July number of The Forum, Prof. Geo. J. Romanes answers, in behalf of the Darwinians, the criticisms made by the Darwinian doctrine, by Prof. Huxley. It is an important summary of the present position of the theory, and is written by one of the Episcopal Survey, explaining the expository of the different kinds of seals, with especial reference to deposits in the United States. Other articles are:—

50 CTS. A COPY. $5.00 A YEAR.

THE FORUM PUBLISHING CO., 253 Fifth Ave., New York.

THE PEOPLE I'VE SMILED WITH.

RECOLLECTIONS OF A MERRY LITTLE LIFE, by MARSHALL P. WILDER. The American Humorist, With two Portraits. Extra cloth, gilt top, etc. $1.50.

"Blessed be he who with merry quip, larges tedious hours or causes one flower of merriment to bloom in the desert of self-indignation and sorrow... His name is synonymous with mirth."—John A. Cockeril, Editor N.Y. World.

"The book is full of good stories and clever bits of pen portraiture. None can read it and not be amused. It is impregnated with a fund of humor, that is simply irresistible."—In answer to repeated calls, we have prepared an edition in paper binding at 80 cents of the most popular book of this year.

JONATHAN AND HIS CONTINENT.

"A volume of sparkle and delight from title page to finishing."—Detroit Free Press.

"There is not a dull page in it."—N. Y. World.

"One reads the book with a perpetual smile on one's face."—Chicago News.

"Will be read, talked of, and enjoyed."—Atlanta Home Journal.

WALLACE'S DARWINISM.

"The present work contains the conclusions upon this great subject of thirty years of thought and observation. A contribution of the first importance to the literature of the subject. At the same time it would be difficult to find a book more entertaining to the general reader. He writes with the sincerity and easy mastery which comes of fulness of knowledge. There can be no more interesting guide in that great wonderland of science in which he has been so long one of the chief discoverers."—New York Times.

GALTON'S NATURAL INHERITANCE.

NATURAL INHERITANCE. By Francis Galton, F.R.S., author of "Inquiries into Human Faculty," etc., 8vo. $2.50.

Mr. Galton is the highest authority on this subject: a new book by him is an event in the scientific world."—Boston Advertiser.

"Mr. Francis Galton, whose studies in heredity have been lifelong, whose methods are so patient, is the last man in the world to entertain startling theories or to assert ill-digested things as facts. . . . For perfecting philosophical inquiry, for prudence and good judgment, Mr. Galton is to be considered as presenting the highest examples of modern research."—New York Times.

WEISMANN ON HEREDITY.

THE CHEMISTRY OF PHOTOGRAPHY.

THE CHEMISTRY OF PHOTOGRAPHY. By Raphael Meldola, F.R.S., Professor of Chemistry in Finsbury Technical College. With Illustrations. 12mo, $2.00.

"Professor Meldola's work will find a hearty welcome, not only from professional photographers who wish to understand the principles upon which their art is based, but it will be a great help to the chemist and physiologist. His book will be of service to the younger members of the photographic art, and to all who need to know the history of this wonderful science. . . . The book deserves very hearty commendation as a popular scientific treatise in the best sense of the term."—New York Nation.

SIR WILLIAM THOMSON'S LECTURES.

"We do not believe that any man of science will rise from the perusal of these papers without a deepening or a shattering of old convictions, and without broader and clearer views of the possibilities of future scientific progress. . . . We await the appearance of the second and third volumes of these papers with great interest."—Nation.

THE PLEASURES OF LIFE. Parts 1 and 2. Complete in one volume. Cloth, $1.25.

"Really admirable. . . . Sir John Lubbock writes in a charming style. . . . A pleasant little book than this is seldom published. It is at once suggestive and interesting. It settles no deep and dark problem, indeed, but itteas the varying phases and vicissitudes of life with a broad and hopeful philosophy, and from points of view the sustained elevation of which adds much to the effect of the whole.—N.Y. Tribune.

GLEANINGS IN SCIENCE.

A SERIES OF POPULAR LECTURES ON SCIENTIFIC SUBJECTS. By Gerald Molloy. Crown 8vo, $2.25.

Contents:

I. The Modern Theory of Heat
II. Lightning, Thunder, and Lightning-Condensors
III. The Storing of Electrical Energy
IV. The Sun as a Source of Energy
V. The Electric Light
VI. The Glacier of the Alps

The lectures are followed by an appendix giving a short account of the recent controversy on Lightning-Condensors.

The Spectator says:—"Perhaps the lectures on the Electric Light form the most interesting portion of this book, as much as they are made familiar with the methods of appliances to which we owe the marvels of electric lighting. They are arranged in a masterly manner, all the essential facts representing the production of the electric current, and the marvelous applications by which the current is made to yield the electric light. . . . All the lectures contained in this volume are pervaded by a philosophical spirit which gives a sort of unity to the various subjects outwardly unconnected of which they treat."

Macmillan & Co.'s Complete Catalogue of Publications will be sent free by Mail to any address on application.
