fish from the creek into the river. The upper portion of these wooden structures has entirely disappeared in the long lapse of time that has ensued since they were placed there. The edge of the flats on which the stakes stood was covered with about two and a half to three feet of water on the flood tide. At slack water it forms a low mud-bank slanting toward the creek. Three different stations on the creek, probably all that exist, in the bed of the creek referred to. This opinion is based upon careful examinations, made within the past four years, of nearly every inch of ground in the neighborhood of the wooden stake-ends, by dredging in sections between certain points marked upon the creek’s bank. The implements found in one of the stations are generally made of argillite, with a few of quartz and quartzite. Some were very rude in character, and not unlike the palisolits found by Dr. C. C. Abbott in the Trenton gravels. Objects of stone and pottery rather better in finish than those at station A have been found at the two other stations, B and C.”

The remainder of my letter of November, 1887, is correct: the other portions must be read subject to the changes that this repetition may suggest, which have been copied from a duplicate letter made by me before sending it (in October; 1886) [1887? —Ed.] to the journal referred to, for publication.

A unique collection from the supposed aboriginal fish-weir sites is now at the Peabody Museum, Harvard University, where any one interested in the subject may examine them. Most of the objects found and were collected by myself and friends, whose names are attached to their specimens. Work was abandoned on the locality two years ago, careful hand-dredging having exhausted the relic-beds. Last summer the steam-dredge used in deepening the creek’s bed, so that slops might approach the brick-yard standing on its bank, uprooted the various stations, A, B, and C, completely obliterating them. A few specimens of interest were, however, secured by some of the workers in the brick-manufactory and myself. Some of these specimens have been presented to the Peabody Museum, with letters from the donors in regard to them.

I hope this letter, giving a brief resumé of the finds at Naaman’s Creek mouth, will cause all absurd romance in regard to pile-dwellers on the Delaware to cease. If they ever did exist, I have certainly failed to find any traces of such a people, and never upheld any such nonsensical theories. HILBORN T. CRESSEY.

Oscillations of Lakes (Seiches).

The ten-minute wave that Mr. Ledyard reports on Cazenovia Lake, N.Y., in Science of Feb. 7, is apparently an oscillation of the same kind as those known in Switzerland by the name of seiches. They have been minutely studied for Lake Geneva by Professor Forel of Morges, Switzerland, who has written many reports on his observations for the Archives des Sciences, about 1877-80. He regards them as wave-like oscillations, commonly uninodal, of the whole body of water in the lake, produced by external disturbance, such as an earthquake, or a change of atmospheric pressure like that occurring in thunder-storms or wind gusts. He finds that the full period of oscillation for the uninodal wave is $\sqrt[3]{li}$ is the length of the lake, and $h$ the depth; that is, the velocity of the wave is proportional to the square root of the depth. Sometimes the seiche is transverse, or from side to side, instead of longitudinal or from end to end. In Lake Geneva the longitudinal seiche has a full period of 73 minutes, which, for the length of 73.3 kilometres, indicates a mean depth of 114 metres. The transverse seiche oscillates in 10 minutes and 17 seconds, where the breadth of the lake is 13.8 kilometres, indicating a mean depth of 205 metres. These depths agree well with the results of soundings. Similar phenomena have been described for other Swiss lakes.

Very little has been said about seiches in this country. Professor John LeConte has called attention to the probability of their occurrence in Lake Tahoe, and predicted their periods by Forel’s formula as 18 and 13 minutes (Overland Monthly, 1888). Science (May 7, 1886, p. 419) has a note on the seiches of Lake Ontario, as observed by Rhodes at Oswego, N.Y., indicating a period of about an hour. The lakes of central New York, near Mr. Ledyard, afford the best possible opportunity for examination in this regard. A simple self-recording apparatus to determine the oscillations of water-level could be driven by an ordinary clock; and a month’s record from the end and the middle side of a lake would probably suffice to determine its seiches with fair accuracy.

W. M. DAVIS.

I took Cold, I took Sick, I took

SCOTT’S EMULSION

RESULT: I take My Meals, I take My Rest, and I AM VIGOROUS ENOUGH TO TAKE ANYTHING I CAN LAY MY HANDS ON: getting fat too, FOR Scott’s Cures of Pure Cod Liver Oil and Hypophosphites of Lime and Soda NOT ONLY CURED my Incep-tious Consumption BUT CURED ME UP, and is now PUTTING FLESH ON MY BONES. At the Rate of a Pound a Day, I take it JUST AS EASILY AS I DO MILK. SUCH TESTIMONY IS NOTHING NEW: Scott’s EMULSION is reported WONDERS DAILY. TAKE NO OTHER.

A New Method of Treating Disease. HOSPITAL REMEDIES.

What are they? There is a new departure in the treatment of disease. It consists in the collection of the specifics used by noted specialists of Europe and America, and bringing them within the reach of all. For instance, the treatment pursued by special physicians who treat indigestion, stomach and liver troubles only, was obtained and prepared. The treatment of other physicians celebrated for curing cataracts was procured, and so on till these incompurable cures now include disease of the lungs, kidneys, female weakness, rheumatism and nervous debility.

This new method of “one remedy for one disease” must appeal to the common sense of all sufferers, many of whom have experienced the ill effects, and thoroughly realize the absurdity of the claims of Patent Medicines which are guaranteed to cure every ill out of a single bottle, and the use of which, as statistics prove, has ruined more stomachs than alcohol. A circular describing these new remedies is sent free on receipt of stamp to pay postage by Hospital Remedy Company, Toronto, Canada, sole proprietors.

ANY OF Prof. A. MELVILLE BELL’S WORKS

—ON—

Elocution — Visible Speech — Principles of Speech — Faults of Speech — Phonetics — Line Writing — World — English, etc., SUPPLIED BY N. D. C. HODGES, 47 Lafayette Place, N.Y.

FOR SALE.

A First-class water motor, for hydrant pressure of 30 pounds or over. No experiment; 5,000 in use. Simple, safe, reliable, economical, and very desirable. No diet, delay, or danger. Always ready for repairs. Any one can erect and operate it in his own workshops, with ease, etc., address “HYDRAULIC” care of SCIENCE, 47 Lafayette Place, New York.
