

— The Scribners will publish immediately a small book by George W. Cable, entitled "The Negro Question," containing the address delivered by the author on Washington's Birthday before the Massachusetts Club in reply to the memorable speech by the late Henry W. Grady; also several open letters by Mr. Cable on this subject.

— The Scribners will issue shortly the first of a series of interesting memoirs of "Three Famous French Women," translated from the French of M. Imbert de Saint-Amand, by T. S. Perry. The subject of the first volume will be the Empress Josephine, and will be entitled "The Wife of the First Consul." Other works will follow on Marie Antoinette and the Empress Marie Louise.

LETTERS TO THE EDITOR.

Means of increasing the Accuracy of locating Vessels at Sea.

In looking over some meagre accounts of the recent meeting of the International Maritime Congress, I failed to find any mention of a very important branch of navigation to which my attention was attracted some years ago. I refer to the question of the present accuracy of the instruments for determining the position of a ship at sea, and the steps that must be taken in order to improve this accuracy. The reasons that make this an important matter are so obvious that it is not necessary to catalogue them. I need only say that in approaching any coasts, dangerous reefs, shallow waters, and, in the case of sailing-vessels, the paths regularly frequented by steamers, it is of the greatest importance to be able to locate the ship's position with all the accuracy attainable.

In 1881 Professor W. A. Rogers, the eminent American astronomer and physicist, read a paper before the Naval Institute at Annapolis, published in the "Proceedings" of the institute, bearing the title "The Co-efficient of Safety in Navigation."

This paper is spoken of by Commander P. F. Harrington, U.S.N., as being "remarkable for the extent and thoroughness of its investigations, and valuable in the application of its results to the practice of navigation. . . . Its practical conclusion and warning ought to be impressed upon every man who is permitted to lay a vessel course."

In this paper Professor Rogers shows the various errors which enter into the determination of a ship's location at sea; and he determines, finally, an average error and a possible error of position from a large number of observations, as shown by logs of vessels in various quarters of the globe. Upon his inquiring of a number of sea-captains as to the limits within which a ship's place can be ordinarily determined, most of them said a mile was the limit, some few said half a mile, and only one man gave so high an estimate as five miles.

The chief sources of error seem to be those pertaining to the compass, chronometer, and sextant. For the compass, Professor Rogers does not come to any very definite conclusion; at least, no numerical estimates of error are made.

A discussion of the rates of a large number of chronometers shows, that, for a chronometer of average excellence, at the end of twenty days an average error of 3.6 miles must be expected, and an error of 11.5 miles must be looked out for. The error of the chronometer increases with the time occupied in the voyage; and a discussion of the errors of one hundred chronometers by Mr. Hartnup of Liverpool (and probably no more capable man has ever examined into the matter) showed that at the end of a voyage of twelve months the error in one of the ship's positions was 524 miles. Another extreme instance cited is the case of Lord Anson's voyage around Cape Horn, in which one ship "actually made land on the wrong side of the continent, the error of position being over 600 miles."

For the sextant observations it is difficult to determine the limit of accuracy; but "the average error of a single observation at sea is not far from 3 miles, and the average co-efficient

Have Just Ready.

Electrical Engineering for Electric Light Artisans and Students.

By W. SLINGO, Principal of the Telegraphists' School of Science; Director of the Electrical Engineering Section, People's Palace, London, and A. BROOKER, Instructor in Electrical Engineering at the Telegraphists' School of Science and at the People's Palace, London. Cr. 8vo, cloth, with 307 illustrations, pp. viii.-631. Price, \$3.50.

** This work is intended not only for those actually employed in the electric lighting industry, but also for those who, having little or no electrical knowledge, have under their supervision various kinds of electrical machinery. The work should therefore prove of service to such men as marine and railway engineers, naval officers, municipal officials and managers of mines and factories.

Elements of Laboratory Work.

A COURSE OF NATURAL SCIENCE.

By A. G. EARL, M.A., F.C.S., Science Master at Tonbridge School. Cr. 8vo., pages xii.-179. \$1.40.

For sale by all booksellers. Sent on receipt of price by the publishers.

LONGMANS, GREEN & CO.,

15 East Sixteenth Street, New York.

SECOND EDITION.

NATURALISTIC PHOTOGRAPHY FOR STUDENTS OF THE ART.

313 pages 8vo., cloth, \$2.00, postage prepaid
"This book contains a greater amount of information on the artistic elements to be considered in photography than any that we know of."—*Scientific American*. Descriptive circulars on application to E. & F. N. SPON, 12 Cortlandt St., New York.

DICTIONARY OF**ECONOMIC PLANTS,**

BY JOHN SMITH,

Associate of the Linnæan Society, author of "Historia Filicum," "History of Bible Plants," etc., etc.

For more than forty years Mr. Smith was connected with the Royal Gardens, Ken., which gave him remarkable opportunities for becoming acquainted with the largest collection of living plants, native and exotic, ever brought together; and from 1846, he was associated with the late Sir W. Hooper in building up the Kensington Museum of Economic Botany. Based on all this experience, Mr. Smith has produced this Dictionary which gives under their popular names information about plants that furnish the wants of man, their history, products and uses. Having received a large invoice of this book from the London publisher, we offer to mail copies postpaid at a discount.

List price, \$3.50: our price, \$2.80.
