and, instead of holding twenty-fourth rank in education, she will soon take a place in the front, if not in the lead.

The institution has experienced steady growth ever since it was founded. The number of students, and of buildings, rooms, and laboratories has increased, and new buildings and laboratories have been erected for their accommodation. The last one was built in the fall of 1890, and is devoted exclusively to veterinary medicine and science.

The new chemical laboratory, dedicated last month, is constructed according to the latest improved plans, and students have the best opportunities for study in all branches of chemistry. In the botanical laboratory is found specimens of plant-life from many parts of the world, and several herbariums both of our own flora and many plants from other countries.

In the mechanical laboratory is found tools and power for the various branches of mechanical art. The physical and electrical laboratories are supplied with the necessary apparatus and appliances for those studies.

The departments of physiology, zoology, and botany are in the main building, and are as well equipped as the former circumstances would allow. Students are encouraged, in the natural sciences especially, to original and independent investigation; and to facilitate this, excursions are made to places of especial geological, botanical, or entomological interest. In connection with the university club, consisting largely of professors and students who are doing advanced work in biology.

Among the many needs of the institution, one may be mentioned a hall for military drill, a fire-proof building in which to place the valuable geological and botanical museums and the library, more space for the students, and better laboratories. The present departments will be added to the institution, whose needs, with those of the present departments, will be well supplied; for the aggregate support is now adequate to a great institution, which Ohio State University is destined to be.

BOOK-REVIEWS.

In this serviceable and timely volume, Mr. HOBBS not only brings his subject up to date, but deals with it in a manner well adapted to the requirements of students and practical men. In these particulars he has followed the same methods used by him in his previous works in the field of Physical Chemistry.

A Monograph on the Travels of the Emperor Claudius in Syria. By E. C. B. Diirer. London, 1890. 3s. 6d. net.

THE WEEK,

PUBLISHED EVERY FRIDAY.

$3.00 per Year.

THE WEEK has entered on its EIGHTH year of publication, greatly improved in every respect, rendering it more worthy the cordial support of every one interested in the maintenance of a first-class literary journal.

The independence in politics and criticism which has characterized THE WEEK ever since its first issues will be rigidly maintained; and unaccustomed efforts will be made to improve its literary character and increase its attractiveness as a journal for the cultured home. Many new and able writers are now, or have promised to become, contributors to its columns, and the constant aim of the publishers will be to make THE WEEK truly equal to the literary journals in Britain and the United States.

The editors cordially invite contributions from correspondents in the United States and Canada, and those in other parts of the world are quite as welcome as those in the States. The journal will, of course, be open to the best in every department of literature, both theoretical and practical.

The Week is the only free monthly in this country for the complete information of the student and the man of letters.

M. A. A. Enfield, Secretary of the Board of Trustees.

THE AMERICAN GEOLOGIST FOR 1891 AND BIEU'S NEW ATLAS OF THE METROPOLITAN DISTRICT, will be given to New Subscribers to the GEOLOGIC UNION (which is the regular price of the Atlas alone), if ordered through the GEOLOGIC UNION.
