vast multitude of birds are green or olivaceous, at least dorsally. On the other hand, tree-frequenting animals, perhaps a majority of them, are better protected by a color-resemblance to bark than to leaves, and they are certainly so protected. The author contends here, as elsewhere, the exclusive or even general agency of natural selection. He confines that "at every step, in fact, in the study of animal coloration we are met with closed doors, which can only be unlocked by keys furnished by an intimate chemical and physiological knowledge, such as we do not at present possess."

In Chapter IV., on warning coloration, we find the most valuable original feature of the work—the numerous experiments with the palatability of animals, especially insects generally supposed to illustrate warning coloration. These experiments, although furnishing somewhat contradictory evidence, are in the main a valuable confirmation of previous ideas. Dr. Eisig's theory of warning colors is advocated. He thinks that "the brilliant colors have caused the inedibility of the species, rather than that the inedibility has necessitated the production of bright colors as an advertisement," a somewhat startling if not revolutionary idea.

Chapter V. is on protective mimicry. This over-delightful theme is well handled, although we can hardly repress an instinctive shudder at the iconoclast which seeks to tear down the exquisitely simple structure so beautifully wrought by Bates, Wallace, Belt, and others, and we hope to be forgiven for expressing what is perhaps unscientific but deep-seated aversion to this attempted destructive criticism of the conclusions of those whose knowledge was gained in the woods and fields rather than in the laboratory or dissecting-room.

Chapter VI. treats of sexual selection; but lack of space forbids more than a mention of this chapter, except to enter a protest against the idea that birds do not possess an exalted aesthetic sense. Here again the field-naturalist will be apt to agree with Poulton, who, after presenting a large array of facts, says: "Such facts point toward the existence of a widespread aesthetic sense in the higher animals."

The book as a whole is a valuable contribution to the literature of an intensely interesting subject, and will doubtless be read with pleasure and profit by thousands who do not claim to be scientists.

C. C. Nutting.

State University, Iowa City, Iowa.

The merit of the Swedish system consists in the effort to develop in a scientific and systematic manner all the parts of the body. It is not an attempt to make a derrick of the human body by the excessive development of a few lifting muscles, nor does it aim at drills which make an attractive show by the simultaneous movements of identical parts of the body. It discards the old rhetorical and automatic movements as being of but little value. The fundamental principles and advice which form the introductory portion of this little handbook give this definition: "The aim of educational gymnastics is to develop the body into a harmonious whole under the perfect control of the will. It is not to produce great bulk of muscle, but to cause that already present to respond readily to volition, to improve the functional activity of the body, and to counteract and correct tendencies to abnormal development, especially those resulting from the artificial life of civilization... Movements are chosen for physical and physiological effects, especially local or general, so that only those exercises are used whose effects are needed, and those are excluded whose effects are doubtful or pernicious."

Attention in this country was first called to the Swedish gymnastics by the introduction of the Swedish movement-cure. Though we derive this massage treatment from Sweden, the Japanese have practised a similar method for centuries, utilizing blind people as masseurs.

This handbook will be of great assistance to those who have studied the system.

**Dyspepsia**

**Dr. T. H. Andrews, Jefferson Medical College, Philadelphia, says of Horsford's Acid Phosphate.**

"A wonderful remedy which gave me most gratifying results in the worst forms of dyspepsia."

It reaches various forms of Dyspepsia that no other medicine seems to touch, assisting the weakened stomach, and making the process of digestion natural and easy.

Descriptive pamphlet free on application to Horsford Chemical Works, Providence, R. I.

Beware of Substitutes and Imitations.

**For sale by all Druggists.**

---

**THE LABRADOR COAST.**

A JOURNAL OF TWO SUMMER CRUISES TO THAT REGION.

WITH NOTES ON ITS EARLY DISCOVERY, ON THE ESKIMO, ON ITS PHYSICAL GEOGRAPHY, GEOLOGY AND NATURAL HISTORY, TOGETHER WITH A BIBLIOGRAPHY OF WORKS, ARTICLES, AND CHARTS RELATING TO THE CIVIL AND NATURAL HISTORY OF THE LABRADOR PENINSULA.

By ALPHEUS SPRING PACKARD, M.D., Ph.D.

Sportmen and ornithologists will be interested in the list of Labrador birds by Dr. L. W. Turner, which has been kindly revised and brought down to date by Dr. J. A. Allen. Dr. R. S. Scudder has contributed the list of butterflies, and Prof. John Macoun, of Ottawa, Canada, has prepared the list of Labrador plants.

Much pains has been taken to render the bibliography complete, and the author is indebted to Dr. Franz Boas and others for several titles and important suggestions; and it is hoped that this feature of the book will recommend it to collectors of American.

It is hoped that the volume will serve as a guide to the Labrador coast for the use of travellers, yachtsmen, sportsmen, artists, and naturalists, as well as those interested in geographical and historical studies.

518 pp., 8vo., $3.50.

N. D. C. HODGES, 874 BROADWAY, NEW YORK.
FIRST STEPS IN PHILOSOPHY. (Physical and Ethical.)

By William Mackintire Salt, Author of "Ethical Religion."

This book aims to answer to a thorough-going and scientific way two fundamental inquiries: Who is Man? and What is Duty? Clearly it will win the reader's confidence if it succeeds to any extent in effecting a thorough-going and scientific way. It avoids technical language and puts his thoughts in clear and popular form. The book is not so much for philosophers as for ordinary men and women who are feeling their way into an intelligible and satisfactory view of the world.

Our Heredity from God. Lectures on Evolution. By E. P. Powell. Cloth, 180s, 480 pages, $1.75.

It comes nearer being the hand-book of evolution, adapted and written for a general knowledge and accessible to all. The book is a work of God, and it is not to be accused of the want of a thorough-going and scientific way. It avoids technical language and puts his thoughts in clear and popular form. The book is not so much for philosophers as for ordinary men and women who are feeling their way into an intelligible and satisfactory view of the world.

The Evolution of Immortality. Suggestion for an Individual Immortality Based upon the Organic and Natural History, by C. E. Stockwell. Second edition, with appendix. Cloth, 180s, 100 pages, 60 cents.

The book, which considers the growth of human life from embryology and cell-life up to the present, is a work of God, and it is not to be accused of the want of a thorough-going and scientific way. It avoids technical language and puts his thoughts in clear and popular form. The book is not so much for philosophers as for ordinary men and women who are feeling their way into an intelligible and satisfactory view of the world.

Religion and Science as Allies, or Similarities of Scientific and Religious Knowledge, by Charles Thompson Bixby. Paper, 75 cents; cloth, 100 cents; 300 pages; 50 cents. 50 cents.

The book is a work of God, and it is not to be accused of the want of a thorough-going and scientific way. It avoids technical language and puts his thoughts in clear and popular form. The book is not so much for philosophers as for ordinary men and women who are feeling their way into an intelligible and satisfactory view of the world.

The Unending Quest; or, Creation Ever Present. By Henry M. Simons. Paper, square 12mo, 32 pages, 25 cents.

Here the story of the creation is told in a reverential, loving, and earnest way. The book is a work of God, and it is not to be accused of the want of a thorough-going and scientific way. It avoids technical language and puts his thoughts in clear and popular form. The book is not so much for philosophers as for ordinary men and women who are feeling their way into an intelligible and satisfactory view of the world.

Evolution and Christianity. A Study. By G. S. Crane. Cloth, 175s, 200 pages, 80 cents.

The book is a work of God, and it is not to be accused of the want of a thorough-going and scientific way. It avoids technical language and puts his thoughts in clear and popular form. The book is not so much for philosophers as for ordinary men and women who are feeling their way into an intelligible and satisfactory view of the world.
