putrefactive bacteria entered the egg in its passage down the oviduct and before the shell was formed.

But to conclude that all eggs when laid contain putrefactive bacteria is not warranted. It is a matter of common household observation that a few eggs do not decay, no matter how long they may be kept, and the further fact that eggs packed in some dry material, as sawdust, salt, etc., and those greased or coated with gelatin, etc., seem to keep longer than those left in the open air, would seem to indicate that the bacteria enter through the shell.

I regret that these experiments were not completed.

The point is one of considerable hygienic and even commercial importance and one that needs but a little careful work to settle beyond question.

CHARLES T. MCLINTOCK.

University of Michigan, Ann Arbor, Mich., Aug. 11.

**CORRELATION OF TEJON DEPOSITS WITH ECOCENE STAGES OF THE GULF SLOPE.**

While comparing the Texan Eocene fossils with type specimens and others in the collection of the U. S. National Museum and in the Philadelphia Academy of Natural Sciences I have been impressed with the remarkable sameness in faunal characters throughout the vast extent of the lower Claiborne, or Lisbon, horizon; many of the species from South Carolina are identical with those from the banks of the Rio Grande, and the rocks from Ft. Tejon, California, furnish a very similar fauna with several identical and many more analogous species. Gabb's *Cardita hornii* is *Venerioidia planicosta* Lam. as held by Conrad; the type specimen is slightly misformed and imperfect, but others from the locality are quite typical *planicosta*. Gabb's *Architectonica cognata* is Conrad's *Sarolium alveatum*; Gabb's *Architectonica hornii*, Conrad's *Solarium anemoneum*; Gabb's *Neverita secta*, Conrad's *Natica actae*, and so on. Gabb's peculiar and characteristic little *Whidbeyia fines* is known from Alum Creek Bluff, Colorado River, Bastrop Co., Tex., and is in itself a strong argument for the synchrony of the Texan and California beds from which it is derived. Moreover, in deposits of this horizon on both sides of the Rockies, there are similar developments in the genera *Crasnatiella*, *Cythera*, *Pyrgus*, *Leucitus*, *Rinella* and others.

With the above facts in mind I cannot help suggesting that those who have an opportunity to study the Eocene deposits of California (Tejon deposits) would do well to look for the Midway stage which ranks second in persistency among the subdivisions of the Eocene along the Gulf slope. In other words search should be made along the Chico-Tejon contact for such species as *Encliometra ulirici*, *Cuculina macrodonia*, *Ostrea pulchena*, together with *Vengarioidia planicosta*, *Turridella mortoni*, *T. humerosa*, and other Midway forms.

**AN ADDITION TO THE MYOLOGY OF THE CAT.**

Is St. George Mivart's book on the cat there is to be found one of the most extensive articles on feline myology ever written, nevertheless there seems to be a muscle in the hind foot not mentioned in his work or anywhere else known.

It takes its origin by a broad flat bundle of fibres from the outer side of the Os Calcis immediately below the anterior prominence, these run obliquely forwards forming a comparatively broad, thin tendon, which blends on the plantar surface, for the most part, the *Flexor-longus-pollicis*, where it joins the *Flexor-longus-digitctor-pedis*, but a few fibres of the tendon go to the latter muscle.

It is innervated by a branch from the external planter. That this muscle is not an abnormality I am quite sure as it has been found in 25 subjects from the vicinity of New York and one from Italy.

**EXCHANGES.**

(Free of charge to all, if of satisfactory character.

Address N. D. C. Hodges, 635 Broadway, New York.

I wish to exchange a New Model Hall Type writer, price $50, for a Daylight Kodak, 18x24 prefer.

George A. Coleman, Dept. Agric., Div. of Ornithology, Washington, D. C.

**EXCHANGE.** The undesigned is desirous of obtaining corresponding works on malacology, in the States, for Western, Southern, and Southern States. Will also exchange rare malacology for entomological literature. Levi W. Mengel, Reading, Berks. Co., Pa.

**WANTED.** J. W. Draper’s book, the forces producing the organization of plants, etc., wanted for my private library. Address J. Christian Bay, Missouri Bot. Garden, St. Louis, Mo.

**WANTED.** A GRADUATE OF AN American Polytechnic institution and of a German University (Gottingen), seeks a position to teach chemistry in a college or similar institution. Five years’ experience in teaching chemistry. Address Chemist, 735 Cary St., Brookton, Mass.

**WANTED.** A position as teacher of Biology, by an experienced teacher, college graduate with four university post-graduate courses in the subject. Fifteen years’ experience. Address A. M. Somers, La Follette, Tenn.

**WANTED.** Assistant in Nautical Almanac office, Navy Department. The Civil Service Commission will hold an examination on August 15 to fill a vacancy in the postal trigeminus office. The subjects will be letter-writing, penmanship, plain and advanced algebra, logarithms, theory and practice of computations, and principles of trigonometry. Applicants should provide himself with a five-place logarithmic table. The examination results are filed in season, arrangements may be made for the examination for those not in the large cities, who will be furnished upon application to the Commissioner of Washington.

**Delicious Drink.**

Horsford's Acid Phosphate with water and sugar only, makes a delicious, healthful and invigorating drink.

Allays the thirst, aids digestion, and relieves the lassitude so common in midsummer.

**Dr. M. H. Henry, New York, says:** “When completely tired out by prolonged wakefulness and overwork, it is of the greatest value to me. As a beverage it possesses charms beyond anything I know of in the form of medicine.”

I should be glad to hear from any one interested in the subject, and I can furnish a descriptive pamphlet free.

**WANTED.** An application for the position of Entomologist, with an opportunity to work on the beetles of the West. Address Dr. J. Y. Simpson, Rock’s Academy, Providence, R. I., Beware of Substitutes and Imitations.

---

**SCIENCE.**
THE
American Bell Telephone
COMPANY.
125 MILK ST., BOSTON, MASS.

This Company owns the Letters-Patent No. 198,787, granted to Alexander Graham Bell, January 29th, 1877, the scope of which has been defined by the Supreme Court of the United States in the following terms:

"The patent itself is for the mechanical structure of an electric telephone to be used to produce the electrical action on which the first patent rests. The third claim is for the use in such instruments of a diaphragm, made of a plate of iron or steel, or other material capable of inductive action; the fifth, of a permanent magnet constructed as described with a coil upon the end or ends nearest the plate; the sixth, of a sounding box as described; the seventh, of a speaking or hearing tube as described for conveying the sounds; and the eighth, of a permanent magnet and plate combined. The claim is not for these several things in and of themselves, but for an electric telephone in the construction of which these things or any of them are used."

This Company also owns Letters-Patent No. 498,569, granted to Emile Berliner, November 17, 1891, for a combined Telegraph and Telephone, and controls Letters-Patent No. 474,581, granted to Thomas A. Edison, May 3, 1892, for a Speaking Telegraph, which cover fundamental inventions and embrace all forms of microphone transmitters and of carbon telephones.

THE MODERN MALADY; or, Sufferers from 'Nerves.'

An introduction to public consideration, from a non-medical point of view, of a condition of ill-health which is increasingly prevalent in all ranks of society. In the first part of this work the author dwells on the errors in our mode of treating Neurasthenia, consequent on the wide ignorance of the subject which still prevails; in the second part, attention is drawn to the principal causes of the malady. The allegory forming the Introduction to Part I. gives a brief history of nervous exhaustion and the modes of treatment which have at various times been thought suitable to this most painful and trying disease.
