Entirely out of their element, going to prove that at some remote period the present lake bed was simply a part of the sea bottom, which was thrown up by volcanic action with the superstructure and its inhabitants.

In the Escondido River, which enters the sea on the Mosquito Coast, Mr. Richmond found sharks as far up as De Flama, sixty-five miles from its mouth. During the dry season, a period of very brief duration, the water is briskly at high tide at this distance. Several sharks, from two to four feet long, were caught here while the water was perfectly fresh. It is not known, however, that these were of the same species as those inhabiting the lake.

Hugh M. Smith.

U. S. Fish Commission, Washington, D. C.

AMONG THE PUBLISHERS.

EXHIBITION AND SALE OF BOOKS, PRINTS, AND DRAWINGS, ABERDEEN ART EXHIBITION, 1910, BY THE ABERDEEN ART CLUB, UNIVERSITY OF ABERDEEN, SCOTLAND.

October 29, 1893.

SCIENCE.

Indigestion.

Horsford's Acid Phosphate is the most effective and agreeable remedy in existence for preventing indigestion, and relieving those diseases arising from a disordered stomach.

Dr. W. W. Gardner, Springfield, Mass., says, "I value it as an excellent preventative of indigestion, and a pleasant acidulated drink when properly diluted with water, and sweetened."

Descriptive pamphlet free on application to RUNFORD CHEMICAL WORKS, PROVIDENCE, R. I.

Beware of Substitutes and Imitations.

FOR SALE BY ALL DRUGGISTS.

The American Bell Telephone Company.

125 Milk St., Boston, Mass.

This Company owns the Letters-Patent No. 186,787, granted to Alexander Graham Bell, January 30th, 1877, the scope of which has been defined by the Supreme Court of the United States in the following terms:

"The patent is for the mechanical construction of an electric telephone to be used to produce the electrical action on which the first patent rests. The third claim is for the use in such instruments of a diaphragm, made of a plate of iron or steel, or other material capable of inductive action: the fifth, of a permanent magnet constructed as described with a coil upon the end or ends nearest the plate; the sixth, of a sounding box as described; the seventh, of a speaking or hearing tube as described for conveying the sound; and the eighth, of a permanent magnet and plate combined. The claim is not for these several things in and of themselves, but for an electric telephone in the construction of which these things or any of them are used." This Company also owns Letters-Patent No. 463,569, granted to Emil Berliner, November 17, 1919, for a combined Telegraph and Telephone, and controls Letters-Patent No. 474,241, granted to Thomas A. Edison, May 3, 1929, for a Speaking Telegraph, which covers fundamental inventions and embraces all forms of microphone transmitters and of carbon telephones.
