

Looking at the matter from different angles . . .

...with Norelco Electron Microscope EM 200

Two-dimensional lateral displacement and two independent angular movements of the specimen under investigation are possible by replacing the standard specimen stage with the **new rotating/tilting specimen stage.**

The specimen holder of the new stage has a rotatable ($\pm 160^\circ$) specimen carrier, and may be tilted $\pm 30^\circ$ above its axis. The specimen can also be moved a maximum of 2.4 mm in two directions at right angles, in a plane perpendicular to the beam axis. Specimen contamination can be eliminated by use of the Norelco Specimen Chamber Cooling Device. An extra opening is provided to insert auxiliaries for stressing, heating, or cooling of the specimen. A point resolution of 10 Å is obtainable.
