

**ISOTOPES IN
EXPERIMENTAL
PHARMACOLOGY**
edited by Lloyd J. Roth

The use of isotopes has added new dimensions to pharmacological research, particularly with regard to drug distribution and drug metabolism. This book gives a review and critical evaluation of their use in experimental pharmacology by 40 authorities from the United States and 10 foreign countries.

**AGING AND LEVELS
OF BIOLOGICAL
ORGANIZATION**
edited by

Austin M. Brues, M.D.
and George A. Sacher

The problems of metazoan aging at all levels of organization ranging from molecules and cells to ecosystems are discussed by geneticists, physiologists, biochemists, psychologists, and pathologists in an interdisciplinary conference sponsored by The American Institute of Biological Sciences.

TERATOLOGY
Principles and Techniques
edited by James G. Wilson
and Josef Warkany

The thalidomide disaster indicated a need for a closer look at all drugs likely to be given during the early stages of pregnancy. This book gives the principles and techniques of teratology, the study of biological malformations, and points out the need to and possibilities of developing drug safety for the human embryo. "... can be considered a textbook of teratology and a laboratory manual..."—*Annals of Internal Medicine*

FOOD QUALITY

Edited by GEORGE W. IRVING, JR., and SAM R. HOOVER. 306 pp. \$8.50; AAAS members' cash orders, \$7.50.

"This book is concerned with the effects that production practices and processing have on food quality. It covers a number of commodity areas including fruits and vegetables, cereals, dairy products, poultry, and eggs and meats. . . .

"The book is an interesting one and it is certainly worthwhile reading even for the well-informed food scientist, since it brings together for the first time the vastly different factors that influence food quality in a number of our agricultural crops. The book should be extremely interesting to those concerned with factors that make up quality and it is written in such a manner that almost anyone could read and understand it. It is not a highly complicated scientific volume; it is recommended reading for anyone who has an interest in food. . . . It is an excellent volume and has a real place in a collection of books on foods."—From a review by Emil M. Mrak in *BioScience*, February 1966.
