## **Balinsky: AN INTRODUCTION TO EMBRYOLOGY** *Fourth Edition*

Now in a revised and up-dated fourth edition, *Balinsky* continues to meet the needs of modern courses in the developmental biology of animals. Coverage of recent research on cell shape changes and the morphogenetic movements in mesenchyme has been improved. Material on gastrulation, the genetic activities involved, and the role of induction in differential translation and transcription has been expanded. New information on in vitro studies of mammalian eggs and the chemical aspects of differentiation have been added.

By **B. I. Balinsky**, University of Witwatersrand, Johannesburg. 648 pp. 469 ill. \$13.50. Aug. 1975. **Order # 1518-X.**

## **Carpenter: IMMUNOLOGY AND SEROLOGY** *Third Edition*

Organized to cover basic biological and chemical information followed by laboratory and clinically-oriented topics, the third edition of *Carpenter* continues to provide greater emphasis on serology than other immunology texts. It discusses basic aspects of the mammalian immune response with special attention to the chemical nature and synthesis of antibodies.

By **Philip L. Carpenter**, University of Rhode Island. 346 pp. 130 ill. \$12.95. Sept. 1975. **Order # 2422-7.**

## **DeRobertis, Saez & DeRobertis: CELL BIOLOGY** *Sixth Edition*

The sixth edition of this widely-respected text continues the tradition of full and balanced consideration of the morphological, chemical and physiological aspects of cell biology. Extensively up-dated and expanded, the book offers thorough coverage of enzyme kinetics, chloroplasts, the molecular biology of muscle, and methods of optical and chemical study. The cell is analyzed at all levels of organization—subcellular, macromolecular, molecular—including chemical composition and metabolism.

By **E. D. P. DeRobertis** and **E. M. F. DeRobertis, Jr.** both of the University of Buenos Aires; and **Francisco A. Saez**, Institute for the Investigation of Biological Sciences, Montevideo. 615 pp. 367 ill. \$14.95. May 1975. **Order # 3043-X.**

## **Wetzel: LIMNOLOGY**

A renowned authority on lakes and streams correlates modern curricular trends with his own teaching experience in this outstanding text. The book opens with a discussion of the basic physical and chemical properties and the functioning of lake systems. The bulk of the text is then devoted to a unique integrated functional treatment of the biota and their interaction with the environment.

By **Robert G. Wetzel**, Kellogg Biological Station, Michigan State University. 743 pp. 265 ill. \$17.50. Aug. 1975. **Order # 9240-0.**

Every company has a phone to take your call. The difference at New England Nuclear is the people you can talk to.

Problem with LSC counting? The staff and facilities of our LSC Applications Laboratory will help. Question on tritium labeling? A chemist in our Tritium Labeling

Department wants to discuss it with you. Want to talk with an expert about steroids, amino acids, carbohydrates, RNA-DNA precursors, lipids, drugs, or any other area in radiochemicals? The experts are here, and they all have telephones.

Responsiveness is one of the reasons people count on us.

**In tracer methodology,**

**it's the little things that count.**

coming February 20

# MATERIALS

a special issue of SCIENCE

Increasing demand for materials, increasing obstacles to their discovery and production—these and other critical issues surrounding materials availability and use have generated worldwide concern.

On February 20, 1976, SCIENCE will devote an entire issue to these problems. Thirty of the country's foremost authorities will discuss the implications of national policies, energy constraints, and environmental considerations on materials production and use. They will look at the perspectives in needs and supplies of resources, they will consider the potential of high technology materials and renewable and reusable resources. They will be taking a fresh, careful look at materials issues that have import for the health of industrial economies, the future of materials research, and, ultimately, the quality of life.

Among the distinguished contributing authors are

- Hans Landsberg, Resources for the Future
- Alan Chynoweth, Director, Materials Research Laboratory, Bell Laboratories
- Alvin Weinberg, Director, Institute for Energy Analysis
- James Boyd, President, Materials Associates
- Ralph Kirby, Chief, Division of Metallurgy, U.S. Bureau of Mines

**Additional copies of the Materials Issue are available for \$3.00 each.**

# Annual Meeting

## Boston

18-24 February 1976

# An Invitation

Come and join your colleagues from across the nation and around the world to share the scientific experience of this our bicentennial year. We have arranged a truly fine scientific, social, and cultural event. For details about the program, see the *Preconvention Issue of Science*, 9 January 1976, pages 59-73; for tours, see the 28 November 1975 issue of *Science*, pages 871-873.

Your place is waiting, come to the Sheraton-Boston Hotel and the adjoining John B. Hynes Veterans Auditorium in the Prudential Center of Boston, 18-24 February 1976. You can register at the Meeting and get a room at one of the Meeting hotels. If you can get to only one meeting this year, make sure that this one is it.

—ARTHUR HERSCHMAN

## Science and Our Expectations: Bicentennial and Beyond

### I. The Frontiers of Science

- A. *General Interest* ... future of science ... Viking-Mars experiment ... extraterrestrial intelligence ... history of life ... limits of universe
- B. *Physical Science* ... hydro-spheric ... atmospheric ... meteorology ... storms ... terrestrial planets ... estuaries ... sun and climate ... radiation in the universe ... quantum mechanics ... coal science
- C. *Biological Science* ... models ... communications ... rhythms ... polar biology ... zoos and wildlife ... mathematical questions
- D. *Medical Science* ... bacterial infections ... medication ... neural functions ... cancer research ... consequences of intensive care ... genetics and gene manipulation ... biomedical research ... computers ... statistics
- E. *Anthropology* ... origins of Amerindians ... population studies ... fifty years of anthropology ... nonverbal behavior ... small child's alchemy ... cultural and expressive systems ... reconstructing a culture ... applications
- F. *Social and Political Science* ... integration of science ... study of religion ... innovation diffusion ... class and equality ... federalism reconsidered ... work in America ... modeling social systems ... crime ... violence
- G. *Behavioral Science* ... child rearing ... child development ... parenting function ... adolescent-adult role ... neurology of learning ... intelligence and performance ... race, genetics, and intelligence ... species-specific learning ... anticipation in human affairs ... bio-feedback ... hypnosis

### II. Uses of Science

- A. *General Interest* ... health care ... technology and handicapped ... improbable disasters ... the mouth ... connections of acoustics ... food, nutrition, and population
- B. *Health* ... hearing impaired ... malnutrition ... ecology of famine ... breastfeeding ... mortality ... occupational health ... environmental factors ... health status indexes ... diet and cancer ... fiber
- C. *Food* ... urban food ... dry-land farming ... plant productivity ... crop productivity ... food chain ... Malthus ... energy and food ... indigenous foods ... germplasm resources
- D. *Habitation and Development* ... American development ... environment of the future ... rural America ... rural technology ... air quality ... HABITAT ... economic development ... urban development ... New England
- E. *Energy* ... non-renewable resources ... nuclear power, resources, and alternatives ... solar energy ... Alaska pipeline ... hydrocarbons ... oil from the oceans ... coal mining ... regional energy planning
- F. *Science and Technology Implications* ... university-industry interaction ... foreign policy ... operations research ... social risk ... man-computer relations ... publishing ... information ... public safety
- G. *Science and Technology Policy* ... decision rules ... social policy ... science measurement ... studies ... social utility ... policy implementation ... philosophy of technology ... research ... congressional policy ... federal policy ... government regulation ... states and technology

### III. Perspectives on Science

- A. *General Interest* ... planning for future ... science and art ... communications ... women in science ... science as drama ... anti-science ... interface with the press ... science and society
- B. *Ethical Perspectives* ... human values in engineering ... corporate scientist ... freedom and responsibility ... literary modes ... science and values
- C. *Cultural Perspectives* ... Afro-American ... Brazil ... Mexico ... Japan ... American Indians ... national needs
- D. *Historical Perspectives* ... science and revolution ... archaeology ... bicentennial retrospective ... mathematics ... climate ... biology ... academies
- E. *Education* ... environmental ... educational policies ... science of education ... museums ... college ... symbolic mathematics ... social issues ... scientific literacy ... innovative approaches ... foreign languages
- F. *Opportunities* ... women and mathematics ... minorities in science ... minorities in biomedicine ... affirmative action ... minority students ... job crisis ... science education for women ... opportunities for women
