merican Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects urther the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, ove the effectiveness of science in the promotion of human welfare, and to increase public understanding and ation of the importance and promise of the methods of science in human progress.			

COVER

Taboche Peak (elevation, 6400 meters), Khumbu region, Nepal, as seen from trail near Kumjung. The trail traverses roughly 200 kilometers from Katmandu to Mount Everest Base Camp and is the main artery connecting Himalayan vil-lages in this area. Far from industrial sources, air pollution in the Khumbu valleys can be attributed to local wood and dung fires used for heating and cooking. See page 1344. [Cliff I. David-son, Carnegie-Mellon University, Pitts-burgh, Pennsylvania 15213]
