

Bench-top features in a portable pH meter

Advanced features make the ORION SA 250 Meter the best portable pH measurement system around.

- Autocalibration of 4.01, 7.00, and 10.01 pH buffers. Other values can be entered manually.
- Choice of .1 or .01 pH unit resolution — the .1 option gives you results in seconds.
- Simple controls are easy to understand and use, touch keys respond even to heavy gloves.
- Comes with patented ROSS Combination, Epoxy Body pH Electrode and ATC probe. Carrying case contains all the accessories necessary for immediate use.

To order the SA 250 Portable pH Meter, or for more information, contact your local authorized Orion Laboratory Products Distributor. Or call us toll-free at 1-800-225-1480. In Mass., or Canada, call 1-617-864-5400.

THE IMAGE-1 SYSTEM FROM IVS GIVES NEW MEANING TO DIGITAL MICROSCOPY

A new dimension in microscopy is available. The versatile IMAGE-1 real-time digital image processing system. Now, it is possible to interactively enhance and analyze video images faster and more extensively than ever before.

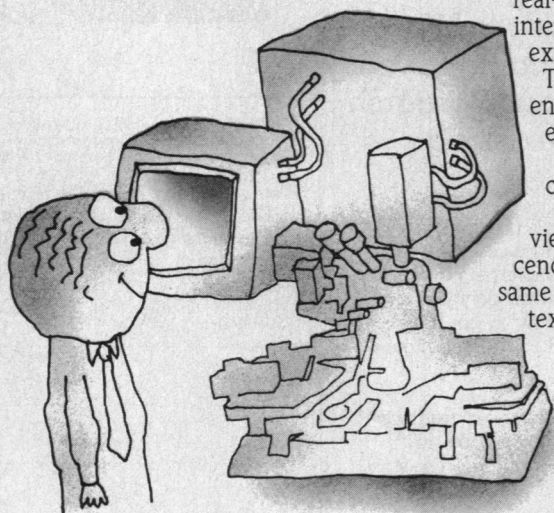

The easy to use IMAGE-1 has been developed in the research environment with leading biologists. All functions have been extensively tested on laboratory applications.

There's a new library of enhancement and analysis commands, too.

Procedures that are easily done include: 10,000X live viewing with excellent contrast; very low light level fluorescence studies at high magnification; comparison of images of the same specimen obtained by different techniques; and color and text editing on processed images for presentations.

IMAGE-1 is Digital Microscopy at its best.

Please call for a brochure and to arrange a demonstration.
