Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

**COVER** The benthic foraminiferan *Sorites marginalis* (Lamarck) was first described in 1816. The initial chambers are in the center of the test, and succeeding ones are added in an annular series. This species occurs only in shallow tropical seas, and is distributed worldwide. See page 775 [SEM photograph by Kenneth Severin, Department of Geology, University of California, Davis 95616]
