■ The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

**COVER** Fijian war clubs presented to the U.S. Exploring Expedition on its visit to Ovalau in 1840. "Short round-headed throwing or missile clubs such as the two at the top and one in the foreground were used to stun an enemy. . . . The larger two-handed clubs have different functions. The center club was said to slice and snap through bone, while the painted battle hammer on the right made a neat hole in the skull." The collection of Fijian artifacts made during the Expedition is "one of the three most important in the world and the only large one that can document a specific time period."
