■ The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER Natural populations of wild radish (*Raphanus raphanistrum*) frequently contain a genetic polymorphism for flower color. The recessive yellow morphs are more attractive to pollinators than are the white morphs. The increased attractiveness results in more pollen from yellow-flowered individuals being spread among other plants in the population. Consequently, the fitness of the yellow plants is enhanced. See page 1625. [Allison A. Snow, Department of Botany, University of California, Davis, CA 95616]
