- The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER The Tracking and Data Relay Satellite System (TDRSS), operated for NASA by Spacecom, was used in conjunction with 64-meter radio telescopes in Australia and Japan to perform very long baseline interferometry in space. Using this technique it has been possible to obtain angular resolution equivalent to that of a radio telescope with a diameter 1.4 times the size of the earth. See page 187.
