- The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

**COVER** Lithograph depicting seed (center) and other parts of *Cycas circinalis* Linn. (false sago palm), a neurotoxic plant. Heavy use of cycad seed for food and medicine has been linked to Guam amyotrophic lateral sclerosis and parkinsonism-dementia, a prototypical disease for study of neurodegenerative disorders of old age. Now considered rare and endangered, cycads are primitive "gymnosperms" that flourished 150 to 200 million years ago. See page 517. [Figure 176C in C. L. Blume, *Commentationes Botanicae. Imprime de Plantis Indae Orientalis. Rumphia* (Lugduni-Batavorum, Amsterdam, 1848), Part IV, pages 11–18]
