■ The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER *Sambia*, the “walking fish” of Ambon as depicted by Samuel Fallours, an artist in the employ of the Dutch East Indies Company, around 1700. Fallours’s legend to his illustration reads, “I caught it on the sand and kept it alive in my house for three days; it followed me everywhere with great familiarity, much like a little dog.” This “bizarre depiction of an antennariid,” along with other illustrations by Fallours said to have been modeled exactly from nature, was published in Louis Renard’s *Poissons, Ecrevisses et Crabes* (Amsterdam, 1719).
