- The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER The gramicidin pore. The molecular structure (yellow) of the gramicidin pore is superimposed on a section of the electron density map derived from gramicidin/cesium crystals. The higher density contours (magenta) correspond to the ion ligands (cesiums and chlorides) located in the center of the pore. The lower density (blue) contours are from the polypeptide chains. See page 182. [B. A. Wallace and K. Ravikumar, Rensselaer Polytechnic Institute, Troy, NY 12180-3590]
