## Articles

### *Trends in Energy Technology*

297 Photovoltaics Today and Tomorrow: H. M. HUBBARD  
305 Changing Prospects for Natural Gas in the United States: W. M. BURNETT AND S. D. BAN  
311 Improving the Efficiency of Electricity Use in Manufacturing: M. ROSS  
318 Improved and Safer Nuclear Power: J. J. TAYLOR

## Reports

326 Origin of Granulite Terranes and the Formation of the Lowermost Continental Crust: S. R. BOHLEN AND K. MEZGER  
329 Template-Directed Oligomerization Catalyzed by a Polynucleotide Analog: J. VISSCHER, C. G. BAKKER, R. VAN DER WOERD, A. W. SCHWARTZ  
331 Access to a Messenger RNA Sequence or Its Protein Product Is Not Limited by Tissue or Species Specificity: G. SARKAR AND S. S. SOMMER

- SCIENCE is published weekly on Friday, except the last week in December, and with an extra issue in February by the American Association for the Advancement of Science, 1333 H Street, NW, Washington, DC 20005. Second-class postage (publication No. 484460) paid at Washington, DC, and at an additional entry. Now combined with *The Scientific Monthly* © Copyright © 1989 by the American Association for the Advancement of Science. The title SCIENCE is a registered trademark of the AAAS. Domestic individual membership and subscription (51 issues): \$75. Domestic institutional subscription (51 issues): \$120. Foreign postage extra: Canada \$46, other (surface mail) \$46, air mail via Amsterdam \$85. First class, airmail, school-year, and student rates on request. Single copy sales: Current issue, \$3.50; back issues, \$5.00; Biotechnology issue, \$6.00 (for postage and handling, add per copy \$0.50 U.S., \$1.00 all foreign); Guide to Biotechnology Products and Instruments, \$18 (for postage and handling add per copy \$1.00 U.S., \$1.50 Canada, \$2.00 other foreign). Bulk rates on request. Change of address: allow 6 weeks, giving old and new addresses and 11-digit account number. Authorization to photocopy material for internal or personal use under circumstances not falling within the fair use provisions of the Copyright Act is granted by AAAS to libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of \$1 per copy plus \$0.10 per page is paid directly to CCC, 21 Congress Street, Salem, Massachusetts 01970. The identification code for Science is 0036-8075/83 \$1 + .10. Postmaster: Send Form 3579 to Science, P.O. Box 1722, Riverton, NJ 08077. Science is indexed in the *Reader's Guide to Periodical Literature* and in several specialized indexes.
- The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

**COVER** The energy carried by these power lines may flow from diverse technologies. This special issue of *Science* contains articles that survey trends in several areas of energy generation and use. These include photovoltaic solar cells, natural gas, energy efficiency in manufacturing, and nuclear power. See Editorial, page 273. [Photograph by Joe Bator, copyright 1987]

- 334 Expression of High-Affinity Binding of Human Immunoglobulin E by Transfected Cells: L. MILLER, U. BLANK, H. METZGER, J.-P. KINET
- 337 Activation of an Excluded Immunoglobulin Allele in a Human B Lymphoma Cell Line: N. BERINSTEIN, S. LEVY, R. LEVY
- 339 Regulation of Lymphokine Messenger RNA Stability by a Surface-Mediated T Cell Activation Pathway: T. LINDSTEN, C. H. JUNE, J. A. LEDBETTER, G. STELLA, C. B. THOMPSON
- 343 The Role of Cis-Acting Promoter Elements in Tissue-Specific Albumin Gene Expression: P. MAIRE, J. WUARIN, U. SCHIBLER
- 346 A Direct Repeat Is a Hotspot for Large-Scale Deletion of Human Mitochondrial DNA: E. A. SCHON, R. RIZZUTO, C. T. MORAES, H. NAKASE, M. ZEVIANI, S. DIMAURO
- 349 Two Molecular Transitions Influence Cardiac Sodium Channel Gating: D. T. YUE, J. H. LAWRENCE, E. MARBAN
- 352 Modulation of Rod-Cone Coupling by Light: X.-L. YANG AND S. M. WU
- 354 The Incremental Threshold of the Rod Visual System and Weber's Law: L. T. SHARPE, C. FACH, K. NORDBY, A. STOCKMAN
- 357 Oxidation-Reduction and the Molecular Mechanism of a Regulatory RNA-Protein Interaction: M. W. HENTZE, T. A. ROUAULT, J. B. HARFORD, R. D. KLAUSNER
- 359 Isolation of a cDNA Clone Derived from a Blood-Borne Non-A, Non-B Viral Hepatitis Genome: Q.-L. CHOO, G. KUO, A. J. WEINER, L. R. OVERBY, D. W. BRADLEY, M. HOUGHTON
- 362 An Assay for Circulating Antibodies to a Major Etiologic Virus of Human Non-A, Non-B Hepatitis: G. KUO, Q.-L. CHOO, H. J. ALTER, G. L. GITNICK, A. G. REDEKER, R. H. PURCELL, T. MIYAMURA, J. L. DIENSTAG, M. J. ALTER *et al.*

## Book Reviews

- 369 Technological Innovation in China, *reviewed by* N. R. LARDY ■ Ruth Benedict, R. HANDLER ■ The Early History of the Ancient Near East, 9000–2000 B.C., R. L. ZETTLER ■ Books Received

## Products & Materials

- 373 Latex Particles with Varied Surface Chemistries ■ Peroxidase-Conjugated Fab' Fragments ■ Medium for T Cells ■ Instantaneous Electrophoresis Results ■ Gel Reader ■ Statistics Software ■ Data Analysis Software ■ Literature

### Board of Directors

**American Association for the Advancement of Science**

*Science* serves its readers as a forum for the presentation and discussion of important issues related to the advancement of science, including the presentation of minority or conflicting points of view, rather than by publishing only material on which a consensus has been reached. Accordingly, all articles published in *Science*—including editorials, news and comment, and book reviews—are signed and reflect the individual views of the authors and not official points of view adopted by the AAAS or the institutions with which the authors are affiliated.

## Progress in Energy R&D

**O**ur present pattern of energy utilization will someday be substantially altered. Impetus for change will arise from our inability to sustain continued increases in oil imports, or to mounting concerns about the greenhouse effect, acid rain, or urban pollution. Four articles in this issue of *Science* describe progress in developing technologies that may be helpful in responding to the next energy crisis.

Hubbard describes dramatic improvements in photovoltaic (PV) technology. Scores of new PV materials and many new designs have been explored. As a result, the cost of PV electricity has dropped from \$15 per kilowatt-hour to about \$0.30 per kilowatt-hour. To be competitive with future electric generations options, PV modules must exhibit solar energy efficiencies in excess of 15% at costs somewhere between \$0.06 and \$0.12 per kilowatt-hour. Recent striking improvements in efficiency of conversion of solar energy to electricity and continued improvements in methods of manufacture indicate that this goal may be attained by the mid-1990s. A competitive solar cell industry has emerged, and substantial research is being conducted in a number of countries.

Burnett and Ban describe ways in which prospects for natural gas have improved. The energy content of natural gas production in the lower 48 states is already substantially greater than that of oil, and research and development have shown that methane occurs and is recoverable in many places in which oil is not present. Examples include coal seams, shales, and deep formations. A recent U.S. Department of Energy reassessment of the resource base concluded that technically recoverable natural gas in the lower 48 states is 1059 trillion cubic feet—a greater than 50-year supply at today's usage.

Natural gas is a clean fuel that gives rise to much less pollution than either coal or oil. In applications for cogeneration of electricity and heat, thermal efficiencies of 60% to 80% are achieved. The authors describe other new applications that guarantee an increasing role for natural gas in the U.S. energy mix. For example, the use of small amounts of gas in coal-fired and waste-burning furnaces can lead to substantially decreased emission of pollutants. Improvements in furnaces for home heating have made gas highly competitive with oil or electricity.

Ross discusses energy efficiency in industry. He points out that largely in response to the energy shocks of the 1970s, U.S. manufacturers reduced their real fossil fuel intensity ratio of energy use to production by 50%. In the past decade there have been only sporadic improvements, and Ross states that the cost-effective opportunity now available is very large. In addition to potential financial advantages, the technology of efficient energy use is improving rapidly. Manufacturing is being revolutionized by introduction of new sensors coupled with electronic processing of information, followed by automatic control of processes. For example, equipment being installed in steel mills increases yields by controlling thicknesses during the rolling process. Another development in industry is use of electricity in new applications where special advantages are achieved. That is, electric heating processes can achieve extremely high energy densities. In arc plasmas temperatures of 10,000°C are routine. In almost every sector of industry pioneering methods of obtaining increased efficiency and energy savings are being implemented. If an energy crunch comes, these demonstrations will find energy-saving replications.

The history of nuclear energy in the United States is a striking illustration of how a great nation can flub a major technological development. Taylor states that the average capacity factor in the United States is about 60% as compared to 75% to 85% in some countries. In addition, U.S. operations and maintenance costs are averaging roughly twice what other countries spend. The U.S. utilities have now set goals to bring their average performance and cost effectiveness to a world competitive level while devoting top priority to safety. Designs of three different reactor systems are moving ahead with five goals in mind: (i) assured safety with features that minimize consequences of human error, (ii) a significantly simpler design, (iii) high reliability throughout a lifetime of on the order of 60 years, (iv) reduction in capital and other costs and a construction time of 3 to 5 years, and (v) a standard design that is predictably licensable.—PHILIP H. ABELSON
