

1539 This Week in *Science*

## Editorial

1541 The Molecule of the Year

## Perspective

1543 The Molecule of the Year: RUTH L. GUYER AND D. E. KOSHLAND, JR.

## Letters

1547 U.S. Scientists and China: J. C. WANG ■ AIDS Drug Trials: R. SMITH ■ Leopard Habitat: D. P. ROSENBERG ■ Neuroscience at Washington University: C. C. HUNT ■ Information Policy: D. A. B. LINDBERG ■ Ethics and USGS: H. WILSHIRE; K. SCHAMBACH; E. MARSHALL

## News & Comment

1551 Hubble: Great Telescope, Bad Service Plan  
1553 Plea to Bromley: Save Our Neutrons  
1554 Britain's Lords Debate Embryo Research  
1555 Science and PR North of the Border  
1556 Maine Case Deals Blow to DNA Fingerprinting

## Research News

1559 New AIDS Drugs Take Careful Aim  
1560 Is the AIDS Epidemic Slowing?  
1561 Key Piece Found for Immunology Puzzle?  
1562 Geophysics from Triton to the Deep Blue Sea: New Quake Forecast: North by Northwest ■ Loma Prieta Quake Unsettles Geophysicists ■ A Geologically Young Triton After All? ■ Bringing Down the Sea Level Rise  
1564 *Briefings:* R&D Lobby Spends NSF's '91 Budget ■ AIDS Tests Fail ■ Study Puts Admiral Peary at North Pole ■ Global Change Encyclopedia on Disc ■ A Faster Parallel Computer for 1992 ■ Academy Recognizes Koop ■ Canadian Kludge? ■ Bromley OSTP Team at Full Strength? ■ George Mason U. Snares NSF's Moore ■ HUGO: Genome Data Open to Scientists

## Articles

1566 Origins of Agriculture in Eastern North America: B. D. SMITH  
1571 Quantifying the Information Content of Lattice Images: A. OURMAZD, D. W. TAYLOR, M. BODE, Y. KIM

## Research Articles

1578 Specific Interactions in RNA Enzyme-Substrate Complexes: C. GUERRIER-TAKADA, N. LUMELSKY, S. ALTMAN

## Reports

1585 Volatilization of High Molecular Weight DNA by Pulsed Laser Ablation of Frozen Aqueous Solutions: R. W. NELSON, M. J. RAINBOW *et al.*  
1587 Growth of Greenland Ice Sheet: Measurement: H. J. ZWALLY, A. C. BRENNER, J. A. MAJOR, R. A. BINDSCHADLER, J. G. MARSH  
1589 Growth of Greenland Ice Sheet: Interpretation: H. J. ZWALLY  
1591 Thermomolecular Pressure in Surface Melting: Motivation for Frost Heave: J. G. DASH  
1593 Air Ventilation by Recoil Aspiration in Polypterid Fishes: E. L. BRAINERD, K. F. LIEM, C. T. SAMPER  
1595 The Anticodon Contains a Major Element of the Identity of Arginine Transfer RNAs: L. H. SCHULMAN AND H. PELKA

■ **SCIENCE** is published weekly on Friday, except the last week in December, and with an extra issue in March by the American Association for the Advancement of Science, 1333 H Street, NW, Washington, DC 20005. Second-class postage (publication No. 484460) paid at Washington, DC, and at an additional entry. Now combined with **The Scientific Monthly** © Copyright © 1989 by the American Association for the Advancement of Science. The title **SCIENCE** is a registered trademark of the AAAS. Domestic individual membership and subscription (51 issues): \$75. Domestic institutional subscription (51 issues): \$120. Foreign postage extra: Canada \$46, other (surface mail) \$46, air mail via Amsterdam \$85. First class, airmail, school-year, and student rates on request. **Single copy sales:** Current issue, \$3.50; back issues, \$5.00; Biotechnology issue, \$6.00 (for postage and handling, add per copy \$0.50 U.S., \$1.00 all foreign); Guide to Biotechnology Products and Instruments, \$18 (for postage and handling add per copy \$1.00 U.S., \$1.50 Canada, \$2.00 other foreign). Bulk rates on request. **Authorization to photocopy** material for internal or personal use under circumstances not falling within the fair use provisions of the Copyright Act is granted by AAAS to libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the base fee of \$1 per copy plus \$0.10 per page is paid directly to CCC, 27 Congress Street, Salem, Massachusetts 01970. The identification code for *Science* is 0036-8075/83 \$1 + .10. **Change of address:** allow 6 weeks, giving old and new addresses and 11-digit account number. **Postmaster:** Send Form 3579 to *Science*, P.O. Box 1722, Riverton, NJ 08077. *Science* is indexed in the *Reader's Guide to Periodical Literature* and in several specialized indexes.

■ The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

**COVER** Eighteen of 1989's top scientific achievements are discussed in a year-end wrap-up, and from this group the "Molecule of the Year" was chosen. The winner—an enzyme that drives a cyclic amplification reaction that produces millions of copies of interesting genes and gene segments. See pages 1541 and 1543. [Image by Lewis E. Calver, courtesy of Cetus Corporation, Emeryville, CA 94608]

- 1597 A Model of Human Acute Lymphoblastic Leukemia in Immune-Deficient SCID Mice: S. KAMEL-REID, M. LETARTE, C. SIRARD, M. DOEDENS *et al.*
- 1601 Endothelial Interleukin-8: A Novel Inhibitor of Leukocyte-Endothelial Interactions: M. A. GIMBRONE, JR., M. S. OBIN, A. F. BROCK *et al.*
- 1603 Conserved Repetitive Epitope Recognized by CD4<sup>+</sup> Clones from a Malaria-Immunized Volunteer: E. H. NARDIN, D. A. HERRINGTON, J. DAVIS *et al.*
- 1606 Inhibition of Antigen-Induced Lymphocyte Proliferation by Tat Protein from HIV-1: R. P. VISCIDI, K. MAYUR, H. M. LEDERMAN, A. D. FRANKEL
- 1608 Mechanisms for Regulating Expression of Membrane Isoforms of Fcγ RIII (CD16): M. L. HIBBS, P. SELVARAJ, O. CARPÉN, T. A. SPRINGER *et al.*
- 1611 Membrane Anchoring of a Human IgG Fc Receptor (CD16) Determined by a Single Amino Acid: L. L. LANIER, S. CWIRLA, G. YU, R. TESTI, J. H. PHILLIPS
- 1614 Immunodeficiency and Clonal Growth of Target Cells Induced by Helper-Free Defective Retrovirus: M. HUANG, C. SIMARD, P. JOLICOEUR
- 1617 Cyclosporin A Specifically Inhibits Function of Nuclear Proteins Involved in T Cell Activation: E. A. EMMEL, C. L. VERWEIJ, D. B. DURAND *et al.*
- 1620 Molecular Cloning of the Thyrotropin Receptor: M. PARMENTIER, F. LIBERT, C. MAENHAUT, A. LEFORT, C. GÉRARD, J. PERRET, J. VAN SANDE *et al.*
- 1622 Regulation of Proenkephalin by Fos and Jun: J. L. SONNENBERG, F. J. RAUSCHER III, J. I. MORGAN, T. CURRAN
- 1625 Functional Analysis of CAR, the Target Sequence for the Rev Protein of HIV-1: E. T. DAYTON, D. M. POWELL, A. I. DAYTON
- 1629 Differential Effects of *nef* on HIV Replication: Implications for Viral Pathogenesis in the Host: C. CHENG-MAYER, P. IANNELLO, K. SHAW, P. A. LUCIW, J. A. LEVY
- 1632 RNA Editing in Plant Mitochondria: R. HIESEL, B. WISSINGER, W. SCHUSTER, A. BRENNICKE

## Technical Comments

- 1635 Steroid Binding at σ-“Opioid” Receptors: S. SCHWARZ, P. POHL, G.-Z. ZHOU; T.-P. SU, E. D. LONDON, J. H. JAFFE ■ Hydrolysis of Carbon Tetrachloride: P. M. JEFFERS AND N. L. WOLFE; D. W. R. WALLACE AND M. KRYSSEL ■ Caterpillars and Polymorphisms: S. H. FAETH AND K. E. HAMMON; E. GREENE ■ Does Voltage Affect Excitation-Contraction Coupling in the Heart?: M. B. CANNELL, J. R. BERLIN, W. J. LEDERER; M. MORAD, L. CLEEMANN, G. CALLAWAERT

## Book Reviews

- 1642 Made in America AND Working Papers of the MIT Commission on Industrial Productivity, reviewed by D. C. MOWERY ■ Beyond the Barricades, W. M. SULLIVAN ■ Ecology in the 20th Century, R. A. POIS ■ A Theory of Human and Primate Evolution, J. MARKS ■ Hypersaline Environments, W. D. GRANT ■ Treatise on Heavy-Ion Science, E. HAGBERG ■ Books Received

## Products & Materials

- 1649 Program for Drawing Chemical Structures ■ Monoclonal Antibodies ■ Delivery System for Cell Injection ■ Plastic Slide Case ■ Data Acquisition and Analysis Software ■ Genome Qualified Restriction Enzymes ■ Literature

*Author Index to Volume 246 is found on pages I-X.  
Information for Contributors is found on XI-XII.*

### Board of Directors

Walter E. Massey  
*Retiring President,  
Chairman*

Richard C. Atkinson  
*President*

Donald N. Langenberg

**American Association for the Advancement of Science**

*Science* serves its readers as a forum for the presentation and discussion of important issues related to the advancement of science, including the presentation of minority or conflicting points of view, rather than by publishing only material on which a consensus has been reached. Accordingly, all articles published in *Science*—including editorials, news and comment, and book reviews—are signed and reflect the individual views of the authors and not official points of view adopted by the AAAS or the institutions with which the authors are affiliated.

## The Molecule of the Year

Historians tend to personalize history. They use political leaders to symbolize war or peace, freedom or slavery, abundance or starvation. Political systems represented by these individuals may be essential, but political leaders cannot cure disease without medicine, cannot improve crops without fertilizer, and cannot encourage the literacy on which democracy depends without communications technology. The great advances of the past have been profoundly influenced by science and technology, and our present standard of living depends on them. Political systems can be designed to encourage advances in science and are essential to the fair distribution of its products. Wealth must be created before it can be distributed.

Sometimes, in the rush of daily events and the ease of describing personalities instead of analyzing issues, the fundamental causes of progress can be obscured. To symbolize that scientific progress and to honor the structure that creates it, *Science* has decided to name a Molecule of the Year. The molecule will symbolize a discovery or technique that may actually involve many molecules, but the award will be singular to force us to choose one such discovery each year that is likely to have the greatest influence on history. We will not require that the initial discovery has to be made in the year of the award because many discoveries are not recognized immediately or require refinement for optimum value. The award will, however, reflect the fact that the particular discovery has reached in the year of the award a stage of development and understanding sufficient to establish its long-term significance.

This year's award goes to the DNA polymerase molecule and to the technique called polymerase chain reaction. PCR, as it is called, has developed into one of the most powerful tools of modern biology since its discovery several years ago, and its applications are burgeoning. One of its first applications allowed an Indian mother to establish the identity of her son for immigration purposes. It has this year served as the basis for making human antibodies in a bacterium. It is revolutionizing the approaches researchers are taking to many problems in biology. Other properties and potentials of PCR are discussed in the section that follows, as are many other discoveries that could easily have been chosen in a year that has seen major advances of science in almost every discipline.

Some who look into the mirror darkly see the waste disposal problem and forget the great numbers of people alive today, see the pesticide problem and forget the availability of food to many, or see the acid rain problem and forget the popularity of the automobile. Each widely adopted technical advance generates new problems that themselves cry out for technical solutions. The problems are real. So, is this progress?

To answer that question I propose a simple objective test: the era swap experiment. Each person could choose to be transported back to some previous time but only on condition that he or she adopt all the features and restrictions of that era. In the 1800s, for example, the globe was less crowded, the air was clearer, the water cleaner, and there were no plastics. However, life expectancy was half of what it is today, transportation was by horseback or on foot, and medical operations were performed without anesthetics. Even a few years ago a high proportion of women died in childbirth, and pneumonia was one of the major causes of death for middle-aged people. Faced with such realities, who would choose to live even a few years in the past?

Our Molecule of the Year is a symbol that we are honoring the process of progress rather than a personality. Most of the discoveries of science (and probably much of political history) result from the actions of many individuals, one of whom may contribute slightly more than others. Each person who moves the discovery one step further contributes to the benefit of all. Science is an international enterprise; its practitioners and those who benefit from the knowledge it creates are located throughout the world. The new knowledge—which translates into living standards—can be used for good or evil, can be distributed fairly or unfairly. The challenge to science is to generate the new discoveries. The challenge to society is to use those discoveries for the betterment of all.—DANIEL E. KOSHLAND, JR.
