This computer visualization of global stratospheric ozone levels for 1 October 1991 highlights the Antarctic ozone hole (thin, dark blue region on lower globe). Powerful computer models are heating up research climates in molecular biology, chemistry, materials sci-

ence, physics, and math—see the 19-page special report (page 44) and Bell's Perspective (page 64). [Image: Lloyd A. Treinish, using IBM's POWER Visualization System on data from NASA/Goddard's National Space Science Data Center]
