SCIENCE • VOL. 257 • 28 AUGUST 1992
False-color, three-dimensional density map of a sample of pelitic schist from British Columbia, Canada, generated from high-resolution computed x-ray tomography images. The sizes and relative positions of the large garnet crystals (red orbs) provide clues about the atomic-scale mechanisms that govern metamorphic recrystallization. See page 1236. [Image: Cambria Denison]
Science 257 (5074), 1185-1295.
