Bert Vogelstein
Harold Venter
Zena Werb
George M. Whitesides
Owen N. Witte
William A. Wulf
Keith Yamamoto

1684
Large structures in the southern sky

1771
Genetic mapping of growth and fatness
A polyanhydride film viewed under cross-polarized light microscopy. Polyanhydrides can be designed to degrade within any length of time ranging from 1 day to 6 years by a alteration of their chemical composition. These biodegradable polymers are currently used in drug delivery devices for the treatment of brain cancer and other diseases. See page 1715. These polymers are among the materials discussed in the special section on Materials Science beginning on page 1698. [Photograph: E. Mathiowitz, J. Jacob, and D. Chickering]
Science 263 (5154), 1665-1786.
