The firefly luciferase gene can serve as an effective reporter for gene expression in vivo. In this *Arabidopsis* seedling, the luciferase gene was fused to the promoter region of the *CAB2* gene, whose expression is regulated by light and the circadian clock. Expression is

greatest (red) in the cotyledons and absent (blue) in the root. See page 1161 and a related Report (page 1163) and News story (page 1091). [Luminescence image: S. Kay and A. Millar]
