Space-filling model of the molecular-based magnetic material $\text{Cs}_2\text{Mn}[\text{V}(\text{CN})_6]$, which orders ferrimagnetically at 125 kelvin in an external field of 25 gauss. The atoms are described by their van der Waals radii; manganese(II) centers are pink, vanadium(II) centers are red, carbon centers are gray, and nitrogen centers

are blue-green. The cesium cations, which occupy the interiors of every cube, have been omitted. See page 397. [Image: K. Llewellyn, Beckman Institute Visualization Laboratory, and M. Rosenblatt and D. White, University of Illinois at Urbana-Champaign]

The Collapse of Free Polymer Chains in a Network 395
