

SCIENCE

A WEEKLY JOURNAL DEVOTED TO THE ADVANCEMENT OF SCIENCE, PUBLISHING THE
OFFICIAL NOTICES AND PROCEEDINGS OF THE AMERICAN ASSOCIATION
FOR THE ADVANCEMENT OF SCIENCE.

FRIDAY, FEBRUARY 5, 1909

CONTENTS

<i>The American Association for the Advancement of Science:—</i>	
<i>The Study of Igneous Rocks:</i> PROFESSOR JOSEPH P. IDTINGS	201
<i>The Conduct of Scientific Work under the United States Government</i>	217
<i>Recent Work of the Mount Wilson Solar Observatory:</i> DR. GEO. E. HALE	220
<i>The Brooks Memorial</i>	222
<i>Scientific Notes and News</i>	223
<i>University and Educational News</i>	227
<i>Discussion and Correspondence:—</i>	
<i>The Law of Radiation:</i> DR. J. M. SCHAEFERLE. <i>American Scientific Productivity:</i> PROFESSOR J. MCKEEN CATTELL	227
<i>Scientific Books:—</i>	
<i>Böttger's Qualitative Analyse:</i> PROFESSOR E. RENOUF. <i>Schorlemmer's Chemistry:</i> PROFESSOR HENRY FAY. <i>Lead and Zinc in the United States:</i> DR. H. O. HOFMAN ...	229
<i>Scientific Journals and Articles</i>	232
<i>Botanical Notes:—</i>	
<i>Physiology and Ecology; Economic Botany:</i> PROFESSOR CHARLES E. BESSEY	232
<i>Special Articles:—</i>	
<i>Sex Determination and Parthenogenesis in Phylloxerans and Aphids:</i> PROFESSOR T. H. MORGAN. <i>Momentum Effects in Electric Discharge:</i> PROFESSOR FRANCIS E. NIPHER	234
<i>Societies and Academies:—</i>	
<i>The Anthropological Society of Washington:</i> DR. WALTER HOUGH. <i>The Geological Society of Washington:</i> DR. RALPH ARNOLD. <i>The Chemical Society of Washington:</i> J. A. LECLERC	238

MSS. intended for publication and books, etc., intended for review should be sent to the Editor of SCIENCE, Garrison-on-Hudson, N. Y.

THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

THE STUDY OF IGNEOUS ROCKS¹

No branch of petrology presents so attractive a field for investigation and study as that concerned with the origin and formation of igneous rocks. The great problems of metamorphism that traverse so much of the earth's dynamic history and involve so many factors common to the problems of igneous rocks are less alluring because of their greater complexity, and less definite character. While much is being done in each of these fields of rock study, it is to the former that I wish to call attention at this time. It is interesting to note how the attitude of the petrographer toward the subject of igneous rocks has changed with increasing knowledge of their composition, and with advancing experience with the fundamental laws of physics and chemistry.

Rocks that were considered igneous a century ago were almost wholly those known to have poured forth from volcanic craters, and were, for the most part, compact, aphanitic lavas, often containing porphyritic crystals—distinctly volcanic rocks. The great number of phanero-crystalline massive rocks were not generally considered as having the same character and origin as volcanic rocks, as being igneous. Their formation was explained in different ways by various geologists. And when treated
