

COVER

An artist's conception of the antibiotic penicillin and some of the bacteria that have developed resistance to various antibiotics. A special section beginning on page 355 explores the rise and spread of so-called bad bugs and possible interventions.

PLANT SCIENCE

Plant Immunity Requires Conformational Changes of NPR1 via S-Nitrosylation and Thioredoxins

Y. Tada et al.

After a pathogen invades a plant, a protein, usually kept in a multimeric state by S-nitrosylation, is dissociated by thioredoxin, freeing the monomers for defense responses.

10.1126/science.1156970

GEOCHEMISTRY

Ferruginous Conditions Dominated Later Neoproterozoic Deep-Water Chemistry

D. E. Canfield et al.

Low sulfur input caused the deeper ocean to become anoxic and rich in ferrous iron 750 million years ago, a reversal from the more oxidizing conditions of the previous 1 billion years.

10.1126/science.1154499

CELL BIOLOGY

Essential Cytoplasmic Translocation of a Cytokine Receptor–Assembled Signaling Complex

A. Matsuzawa et al.

Degradation of one member of a protein complex that forms when a cytokine receptor is activated causes the complex to move to the cytoplasm, triggering the downstream pathway.

BREVIA

OCEAN SCIENCE

Ice Scour Disturbance in Antarctic Waters 371

D. A. Smale et al.

Icebergs have increasingly scoured the coastlines along the West Antarctic Peninsula as its ice shelves and glaciers have waned, affecting benthic marine communities.

RESEARCH ARTICLE

NEUROSCIENCE

Identification of SLEEPLESS, a Sleep-Promoting Factor 372

K. Koh et al.

A search for genetic modulators of sleep in *Drosophila* identified a gene encoding a brain protein that is likely secreted and is required for recovery from sleep deprivation. >> *News story p. 334*

REPORTS

ASTRONOMY

Properties of Gamma-Ray Burst Progenitor Stars 376

P. Kumar, R. Narayan, J. L. Johnson

Analysis of the x-ray afterglow of intense gamma-ray bursts shows that the bursts result from consumption of the outer part of a dense star and define the star's rotation rate.

REPORTS CONTINUED...

APPLIED PHYSICS

- High-Resolution Scanning X-ray Diffraction Microscopy 379
P. Thibault et al.

Analysis of differences in diffraction patterns at each point along an x-ray scan of a material allows imaging of a buried structure with a resolution of 50 nanometers. >> *Perspective p. 352*

MATERIALS SCIENCE

- Observations of Intergranular Stress Corrosion 382
Cracking in a Grain-Mapped Polycrystal
A. King et al.

Tomographic imaging reveals that some grain boundaries in stainless steel are resistant to stress corrosion cracking, which leads to sudden brittle failure. >> *Perspective p. 349*

MATERIALS SCIENCE

- Measurement of the Elastic Properties and 385
Intrinsic Strength of Monolayer Graphene
C. Lee, X. Wei, J. W. Kysar, J. Hone

Measurements of the elastic properties of graphene agree with calculations for a defect-free material and show that it is indeed stronger than other materials.

CHEMISTRY

- Measurement of the Distribution of Site 388
Enhancements in Surface-Enhanced Raman Scattering
Y. Fang, N.-H. Seong, D. D. Dlott

The distribution of electric field-enhancing sites on a nanostructured substrate is measured by using the enhanced field to damage those sites.

CLIMATE CHANGE

- Patagonian Glacier Response During the Late 392
Glacial–Holocene Transition
R. P. Ackert Jr. et al.

Dating of a glacial moraine in southern Patagonia implies that increased precipitation caused glacier growth after a period of Northern Hemisphere cooling 11,000 years ago. >> *Perspective p. 348*

SOCIOLOGY

- Electronic Publication and the Narrowing of 395
Science and Scholarship
J. A. Evans

As journals become available electronically, scientists and scholars have more articles at their fingertips but cite relatively fewer, and these tend to be more recent. >> *News story p. 329*

EVOLUTION

- The Evolution and Distribution of Species Body Size 399
A. Clauset and D. H. Erwin

A model of evolutionary body-size changes that accounts for physical constraints and extinction risk reproduces the size distribution of land mammals from the Quaternary.

CELL BIOLOGY

- Four-jointed Is a Golgi Kinase That Phosphorylates 401
a Subset of Cadherin Domains
H. O. Ishikawa et al.

A newly described type of protein kinase found in the Golgi phosphorylates signaling proteins on amino acids that are destined to be within extracellular domains.

CELL BIOLOGY

- Signal-Mediated Dynamic Retention of 404
Glycosyltransferases in the Golgi
L. Tu, W. C. S. Tai, L. Chen, D. K. Banfield

Glycosyltransferase enzymes stay in the Golgi in the face of continuing membrane traffic because a receptor links their cytoplasmic tails to a recycling coated vesicle.

IMMUNOLOGY

- Anomalous Type 17 Response to Viral Infection by 408
CD8⁺ T Cells Lacking T-bet and Eomesodermin
A. M. Intlekofer et al.

Two transcription factors cooperate to ensure the correct functioning of CD8⁺ T cells during the response to infection.

CELL SIGNALING

- Riboswitches in Eubacteria Sense the Second 411
Messenger Cyclic Di-GMP
N. Sudarsan et al.

The bacterial second messenger cyclic di-guanosine monophosphate controls a wide variety of cellular functions by acting on a riboswitch motif in numerous messenger RNAs.

NEUROSCIENCE

- Bottom-Up Dependent Gating of Frontal Signals in 414
Early Visual Cortex
L. B. Ekstrom et al.

Higher brain centers can modulate activity in the cortical regions that directly receive visual input, but only when a visual stimulus is present.

NEUROSCIENCE

- Evolutionary Origins for Social Vocalization in a 417
Vertebrate Hindbrain–Spinal Compartment
A. H. Bass, E. H. Gilland, R. Baker

The conserved neural circuitry for vocal communication in fish and other tetrapods suggests that this function may have originated prior to the evolution of bony vertebrates. >> *Perspective p. 347*

NEUROSCIENCE

- Orbitofrontal Dysfunction in Patients with 421
Obsessive-Compulsive Disorder and Their
Unaffected Relatives
S. R. Chamberlain et al.

The abnormally low activation in the frontal cortex of individuals with obsessive compulsive disorder and their close relatives may confer a risk for the disease.
