

Coming Fourth Quarter 2009

Introducing *Science Translational Medicine*, the new journal from AAAS and *Science*.

This fall, AAAS and *Science* will launch *Science Translational Medicine*, a new journal focused on how basic research knowledge can be applied to positively impact human health.

The goal of *Science Translational Medicine* is simple: to help the scientific community harness decades of progress in basic research and translate these complex biological discoveries into medical advances.

Headed by Editor Katrina Kelner, Ph.D., and Chief Scientific Adviser, Elias Zerhouni, M.D., former Director of the NIH, the journal will feature original research articles, in-depth reviews, and commentary. Both in print and online, *Science Translational Medicine* promises a unique forum where biologists, engineers, chemists, and physicians can come together to exchange ideas and information.

Science Translational Medicine is now accepting manuscripts. To submit your work for consideration please visit: www.sciencemag.org/marketing/stm/papers.dtl.

For information on institutional or individual subscriptions, please contact sciencemedicine@aaas.org.

Kundi. 10

AAAS was here.

Rwanda —

A country devastated by genocide and a crippling AIDS epidemic. Together with the Rwandan Ministry of Education, AAAS is working to ensure that local children gain skills in science, technology, math and engineering. And this is just one of the ways that AAAS is committed to advancing science to support a healthy and prosperous world. Join us. Together we can make a difference. aas.org/plusyou

GE Healthcare

360° Service

"These days, productivity is everything in our business. Knowing that our scientists were losing valuable time due to service-related issues wasn't helping. To solve this problem and improve overall organizational efficiency, we looked at ways we could consolidate by purchasing from fewer suppliers. GE Healthcare was the only company that was happy to manage everything, regardless of the OEM; unbeatable flexibility that allows our teams to focus on what they are best at. Of course, GE Healthcare's track record in healthcare is world-class and it's a real benefit having a company that is happy to manage equipment of all types."

Richard Dickinson, Director of Operations, ERBI Ltd.

Pharmaceutical and biotech companies around the world rely on GE Service to deliver total coverage. From instrument service agreements — including systems from other manufacturers — to asset lifecycle management and facility validation. Now that's service in 360°. At GE Healthcare Life Sciences, our focus is on helping scientists achieve even more, faster. It's a commitment we have in our genes. And all this is backed by the service, support, and investment for the future that being part of GE can bring.

WHAT'S Next™

Stemgent Small Molecules. Essential.

"Recent reports have shown that replacement of transcription factors with small molecules is capable of improving the efficiency and kinetics of iPS cell generation. Furthermore, addition of small molecules to the culture media can help generate more homogenous self-renewing iPS cell populations."

—Sheng Ding, Ph.D.
Associate Professor of Chemistry,
Scripps Research Institute
Member, Stemgent Advisory Board

The breakthrough work of Stemgent® Advisory Board member Dr. Sheng Ding continues to provide new insight into the importance of small molecules in stem cell research. Stemgent now offers 23 small molecule products all proven to have epigenetic effects on iPS or ES cells. As our research continues, new products will be added. Work with Stemgent to take full advantage of small molecules in your research.

Anti-p53

Diluted
1 in 1 million

PRO*Histo*

Results That Rock!

www.prohisto.com
803-407-0506

Rock your IHC slides on a standard lab rocker...

Anti-Cox2

Diluted
1 in 20,000

- You Get:
1. Guaranteed even staining
-ideal for valuable tissue arrays
 2. Reproducible results
 3. High sensitivity
 4. Save money on antibody costs
-up to 1 in 1 million dilutions
-re-use antibodies up to 4 times

Anti-ERα

Diluted
1 in 20,000

GrantsNet.

The first comprehensive
science grants database.

GrantsNet is expanding its listings of some 900 funding programs from private foundations and not-for-profit organizations to include 400 to 500 new entries from the grants.gov site.

This provides the first comprehensive database of funding opportunities to research scientists and administrators, career counselors, financial aid specialists, and undergraduate and graduate students.

Make the best of it!

Top quality for your sample.

Each of your valuable samples deserves the best treatment. See for yourself how the eppendorf Plate® will save time and reduce costs.

Sample loss in plates can be time consuming and expensive. Therefore, the close environment of each sample should be adapted to its specific quality and purity needs. This can involve a specific purity level or the absence of certain substances, but also stability, reliability, or geometry. The eppendorf Plate® is designed to cover all of the specific needs of your samples!

Eppendorf twin.tec PCR plates*

- Rigid skirt for barcodes and automated handling
- Raised rims for effective sealing
- “skirted” (stackable) and “semi-skirted” plates
- Optimal heat transfer due to reduced wall thickness
- Autoclavable (121 °C, 20 min.)

* Eppendorf owns protective rights under European Patent EP 1 161 994 and US patents US 7,347,977 and US 6,340,589

WHERE THE BASIC SCIENCE

WORLD MEETS THE WORLD OF MEDICINE

Submit your work to *Science Translational Medicine* today!

This fall, AAAS and *Science* will launch *Science Translational Medicine*, a new journal focused on applications of basic research knowledge that will improve human health.

The goal of *Science Translational Medicine* is simple: to help the scientific community harness decades of progress in research at the basic level and translate these biological discoveries into medical advances. Take this opportunity to have your work recognized in this groundbreaking new journal.

Papers in the following areas will be reviewed and considered for publication:

- Animal & Human Studies
- Applied Physical Sciences
- Behavior
- Bioengineering
- Biomarkers
- Cancer
- Cardiovascular Disease
- Cell Culture
- Chemical Genomics/Drug Discovery
- Data Mining
- Drug Delivery
- Gene Therapy/Regenerative Medicine
- Imaging
- Immunology/Vaccines
- Infectious Diseases
- Medical Informatics
- Medical Nanotechnology
- Metabolism/Diabetes/Obesity
- Neuroscience/Neurology/Psychiatry
- Pharmacogenetics
- Policy
- Toxicology & Pharmacokinetics
- And other interdisciplinary approaches to medicine.

To submit your work for consideration, please visit: www.submit2scitranslmed.org

INTEGRATING MEDICINE AND SCIENCE

Confocal FRAP Imaging

The VT-HAWK combines high precision point-scanning fluorescence recovery after photobleaching (FRAP) with multibeam confocal imaging. The instrument's ability to switch between imaging and photo-bleach modes in seconds enables accurate quantitation of fluorescence intensity dynamics in precise, user-defined regions of the image. VT-HAWK supports FRAP, fluorescence loss in photobleaching, photo-activation, and photo-conversion techniques with selectable pinhole sizes for confocal imaging. The instrument's optics deliver optimal laser beam quality at the sample without compromising the performance of either mode. Options include a laser-merge module that houses up to six solid-state lasers.

Interferon Kit

The VeriKine-HST Human Interferon-Beta Serum ELISA Kit is an enzyme-linked immunosorbent assay for measuring human interferon-beta in serum, plasma, and cell culture supernatant samples. It offers high sensitivity, detecting levels as low as 0.5 IU/ml, with an excellent coefficient of variation. It is not affected substantially by the presence of sample contaminants.

Electroelution of Nucleic Acids and Proteins

G-Capsule is a simple electroelution device that excises DNA or protein bands from agarose and polyacrylamide gels and elutes sample in a final volume of 30 µl. Gentle electroelution through G-Capsule eliminates the risks of damage to DNA or protein samples commonly encountered in the use of glass milk, spin columns, binding columns, and other popular techniques. The simple method eliminates washing, spinning, heating, and precipitation steps. The kit has two parts, G-Pick and G-Trap. The user picks up the protein or nucleic acid band with the G-Pick and assembles it with the G-Trap. The assembled G-Capsule is submerged in electrophoresis buffer on a horizontal electrophoresis system and the protein or nucleic acid is rapidly eluted into the G-Trap. The recovered DNA can be used in molecular manipulations such as ligation, restriction enzyme digestion, sequencing, amplification, random priming, and other enzymatic reactions.

Magnetic Stirrers

A new line of magnetic stirrers comes in three sizes and four colors. They are available in sizes 120 mm, 170 mm, and 220 mm, with stirring capacities of 2 liters, 4 liters, and 5 liters, respectively. Stirring speed range is from 150 rpm to 2,500 rpm. The tops are made of polypropylene and come with two nonslip silicon covers (colored black and white) to prevent sliding of the sample vessel. A wide base and rubber feet make these quiet stirrers extremely stable.

High Throughput Electrophoresis

The CSL multiSUB4 is a compact electrophoresis gel system capable of running four gels in one tank for optimum throughput while saving time and space. The system can run up to 1,200 samples in four vertically stacked gel trays to provide high throughput electrophoresis with the space-saving advantage of a small unit. Each gel tray is ultraviolet-transparent to ensure easy visualization of samples directly on the transilluminator following electrophoresis. The inclusion of four double-sided, multichannel-pipette-compatible combs allows rapid sample loading from 96-well gel trays and thermal cycler blocks. The multiSUB system is available with two formats of double-sided combs, one with one marker and one sample lane for the large scale-up of nucleic acids that may be turned over for a 12-sample throughput, and another included with the unit that offers both eight-sample and 18-sample throughput.

Cell Culture Inserts

The Hanging Millicell Cell Culture Inserts are available preloaded into 24-well receiver trays to save time and labor in a range of experimental protocols. Millicell inserts are plastic cell culture wells with membrane bottoms designed to promote more natural cell behavior than plastic plates. The porous membrane allows cells to be fed from both the apical and basolateral sides. As a result, the cells form high-integrity membranes, and studies have shown that cell growth and function more closely resemble those of cells grown in vivo. The hanging, preloaded inserts are available with a polyethylene terephthalate (PET) membrane in two common pore sizes (0.4 and 8.0 micron). The insert's unique design allows easier basolateral access than other hanging inserts with less risk of contamination. The units are sterile and tissue-culture treated. The hanging inserts are recommended for coculture and permeability assays including angiogenesis, chemotaxis, invasion, feeder layers, immunohistochemistry, tumor cell metastasis, and invasion assays.

Electronically submit your new product description or product literature information! Go to www.sciencemag.org/products/newproducts.dtl for more information.

Newly offered instrumentation, apparatus, and laboratory materials of interest to researchers in all disciplines in academic, industrial, and governmental organizations are featured in this space. Emphasis is given to purpose, chief characteristics, and availability of products and materials. Endorsement by *Science* or AAAS of any products or materials mentioned is not implied. Additional information may be obtained from the manufacturer or supplier.

Learn how current events are impacting your work.

ScienceInsider, the new policy blog from the journal ***Science***, is your source for breaking news and instant analysis from the nexus of politics and science.

Produced by an international team of science journalists, *ScienceInsider* offers hard-hitting coverage on a range of issues including climate change, bioterrorism, research funding, and more.

Before research happens at the bench, science policy is formulated in the halls of government. Make sure you understand how current events are impacting your work. Read *ScienceInsider* today.

Epigenetics sample and assay technologies by QIAGEN

Trust in methylation analysis

Rely on QIAGEN epigenetics sample and assay technologies for:

- DNA purification
- Bisulfite conversion
- Whole bisulfite amplification
- Methylation-specific PCR
- Methylation detection and quantification with Pyrosequencing
